*Self-Assessment Color Review of Small Animal Neurology* Simon J. Wheeler,William B. Thomas.1991-01-15 Neurological disorders account for a substantial proportion of cases facing veterinarians and are often difficult to diagnose. Animals may present, with an enormously diverse range of clinical signs, from behavioral changes, incontinence, loss of sensation, or collapse, through to blindness, seizures, paralysis or coma. These problems may be a consequence of a variety of diseases of the nervous system, at various locations. This Self-Assessment Color Review presents the reader with the many and varied manifestations of neurological diseases in the dog and cat, and will help veterinarians in practice and in training to assess and reinforce their own diagnostic and management skills. Cases are presented as questions, usually accompanied by clinical color photographs or imaging, in random order, at differing levels of expertise, and are followed by full explanatory answers. The reader will find this problem-oriented format attractive and thought-provoking for examination revision and for continuing education.

*Emergency Medicine, an Issue of Veterinary Clinics: Small Animal Practice* Justine A. Lee,Lisa L. Powell.2013-06-24 The aim of this volume is to provide practical, cutting-edge updates in small animal emergency medicine. This volume is designed to be a thorough -- but practical -- approach for veterinary emergency practitioners. This edition is a general review of new, clinically relevant hot topics of emergency and critical care. Topics include a global and organ-based approach to the emergent patient, including monitoring of the emergent patient and management of respiratory, cardiac, urinary tract, endocrine, and neurologic emergencies. As emergency clinicians are commonly presented with poisoning cases, one article is dedicated to emergency management and treatment of the poisoned patient. Key diagnostic updates in emergency medicine, including the use of the FAST and TFAST ultrasound, are reviewed. Images and photographs were included to help the practitioner feel comfortable with this rapid, inexpensive, diagnostic tool. Included in this latest version are focuses on treatment, including fluid therapy, transfusion medicine, surgical considerations, and analgesia and anesthesia of the emergent patient. Although less commonly performed in the emergency room (as compared to the ICU), the approach to basics of mechanical ventilation was also discussed. Last, the RECOVER project was reviewed in the CPR article and reiterated the importance of a team approach to veterinary medicine.

*Small Animal Spinal Disorders* Nicholas J. H. Sharp,Simon J. Wheeler.2005 Updated to keep pace with the cutting edge of technology, the new edition of this essential text has been reorganized and expanded. The broad scope of spinal disorders is covered, along with an abundance of color and black-and-white illustrations. Its well-organized approach begins with chapters on relevant anatomy and clinical examination, proceeding to delve into the most updated diagnosis, differential diagnosis, and pre-operative diagnostic aids, concluding with the review of each spinal disorder. This edition moves from an atlas-style presentation to that of a fully illustrated text. Lengthy figure legends have been replaced with shorter, easier-to-digest figure legends. 50 new color prints and line figures enhance coverage on new spine surgery techniques. A description-rich presentation of surgical procedures, outcomes, and complications makes this edition a vital resource for every clinical practice. **BSAVA Manual of Canine and Feline Neurology** Simon Platt, Natasha Olby. 2004-06-28 The third edition of the BSAVA Manual of Canine and Feline Neurology has been completely rewritten and restyled, reflecting the rapid and extensive advances that have taken place in this field over the last 10 years. Accompanying chapters from neurology specialists across Europe and the USA are a set of stunning specially commissioned full colour illustrations. The book is divided into three sections. The first section discusses the essentials of neurological diagnosis including, examination, lesion localization, clinical pathology, electrophysiology, neuroradiology and tissue biopsy. And it is within the neuroradiology chapter that the greatest differences from the previous edition are evident. Increased access to advanced imaging has greatly expanded neurological knowledge and here these techniques are explored in depth alongside thorough descriptions of radiographic techniques typically used in small animal practice. The second section focuses on clinical presentation and has been expanded with the addition of several new chapters on different presenting problems. This has been necessary due to the overwhelming increase in information now available on both new and previously described diseases. The aim of these chapters is to provide the practising veterinary surgeon with information to identify the area of the nervous system responsible for their patient's clinical signs. The reader is then guided through an appropriate diagnostic approach and the different diseases to be considered. Each chapter in this section presents the diseases in a similar fashion; detailing the clinical presentation, pathogenesis, diagnosis, treatment and prognosis of each disease. This is followed by the final section of completely new chapters devoted to the special treatment considerations necessary for the neurological patient. Considered here are emergency neurology presentations (e.g. head injury), neuroanaesthesia, clinical pharmacology, radiotherapy, neurosurgery and rehabilitation of the neurological patient.

**Handbook of Veterinary Neurology - E-Book** Michael D. Lorenz, Joan Coates, Marc Kent. 2010-12-14 Handbook of Veterinary Neurology provides quick access to vital information on neurologic conditions in a wide range of species, including canine, feline, bovine, caprine, equine, ovine, and porcine. A problem-oriented approach makes it easy to diagnose and treat neurologic problems in small and large animals. The coverage of disorders by problem, not by established disease diagnosis, emulates how animals present to the veterinary hospital and simplifies the formulation of a correct diagnosis. Within each chapter, discussions of neurologic disease include a review of the localization criteria and the diseases that can cause that problem, plus treatment and surgical techniques. Lead author Michael D. Lorenz brings decades of experience to neurologic assessment, using a diagnostic approach that requires minimal knowledge of neuroanatomy. A problem-based approach is organized by presenting sign rather than by condition, guiding you to logical conclusions regarding diagnosis and treatment. Algorithms diagram the logic necessary to localize lesions and to formulate diagnostic plans. Coverage of current diagnostic techniques includes the use of diagnostic tools, such as radiology, spinal fluid analysis, electrodiagnosis, and MR imaging. Case histories in each chapter present a problem and the results of the neurologic examination, then ask you to solve the problem by localizing the lesion, listing probable causes, and making a diagnostic plan. Answers are provided at the back of the book. A consistent format for each case history includes signalment, history, physical examination findings, and neurologic examination. A comprehensive appendix describes species and breeds that have a congenital predisposition for particular neurologic diseases. Extensive references make it easy to pursue in-depth research of more advanced topics. A companion website includes 20 narrated video clips with accompanying PowerPoint slides that correlate to the case histories in the book, covering neurologic assessment and clinical

problems such as paresis of one limb, tetraparesis, stupor, seizures, ataxia of the head and limbs, and cranial nerve disorders. Two new co-authors, Jean Coates and Marc Kent, board-certified in neurology, enhance the credibility of this edition. A full-color design and numerous illustrations include enhanced images of neuroanatomy and pathology.

A Colour Handbook of Small Animal Emergency and Critical Care Medicine Josh Rush.2007 Emergency and critical care medicine is one of the fastest growing fields of veterinary practice. Virtually every life-threatening disease can present for emergency evaluation, requiring knowledge of internal medicine, neurology, cardiology, oncology, anesthesia, and much more. Rapid and effective application of this knowledge can mean the difference between life and death for the animal. Critical care requires the recognition of subtle changes in the clinical course of animals, and the ability to take corrective action before severe systemic disease becomes irreversible. Clinical decisions regarding seemingly small items, such as fluid therapy, antibiotics or analgesics, can have a profound impact on patient outcome. The main aim of this book is to focus on management of the more common emergency and critical care conditions encountered in clinical practice, collated in a concise manual. There are chapters on emergencies affecting each body system, on toxicology and other environmental causes, and on critical care techniques ranging from patient monitoring, anesthesia and analgesia to fluid therapy, transfusion medicine and nutritional support, plus a chapter describing clinical skills and procedures. The text is illustrated by top-quality color photos, imaging and diagrams, and key information is highlighted in tabular form.
