*The Work of Mathematics Teacher Educators* Kathleen Lynch-Davis, Robin L. Rider. 2015-10-01 (Originally published in 2004) A major focus of teacher education is the development of preservice teachers. However, it should not be the only focus of those who work in teacher education. Educating inservice teachers is equally important, and the conversation among those involved in mathematics teacher education needs to include discussion of this group as well. This conversation also highlights a need for professional development for teacher educators and research on the development of teacher educators. This monograph discusses issues in educating all of these groups of individuals in an effort to continue the conversation among those involved in mathematics teacher education.

*Measuring What Counts* National Research Council, Mathematical Sciences Education Board. 1993-02-01 To achieve national goals for education, we must measure the things that really count. *Measuring What Counts* establishes crucial research-based connections between standards and assessment. Arguing for a better balance between educational and measurement concerns in the development and use of mathematics assessment, this book sets forth three principles—related to content, learning, and equity—that can form the basis for new assessments that support emerging national standards in mathematics education.

*Assessing Higher Order Thinking in Mathematics* Gerald Kulm. 1990-01-01 Focusing on the elementary and secondary grades, this book explores current theory, research, practice, and policy in the assessment of higher order thinking in mathematics. The chapter authors combine current knowledge and research on mathematics learning and testing to provide examples of innovative test items for classroom use and state assessment programs, and present information on new assessment technologies, including computer-based approaches. Special coverage includes: \* both background information and theoretical perspectives and examples of research on alternative assessment strategies; \* a broad perspective on assessing higher-order thinking, including problem solving, consistent with recent work such as the NCTM Standards documents; \* a discussion of how the recent changes not only in teaching and learning but in our world view of mathematics education imply the need for new approaches to assessment; and \* information on assessment in the context of technology (calculators and computers) with illustrations of both practical and long-term issues.

*A Comparison of Multiple-Choice and Open-Ended Assessments* Diann Dillon. 2010-03 This study examines the question if test results from multiple-choice formatted math tests give an inflated representation of a student's knowledge. Specifically, it compares the test scores of a standardized multiple-choice formatted math test to the scores posted from the same math test but with the answer choices removed. The study involves 120 fifth grade students from three elementary schools from one Central Texas school district. It is a quantitative study utilizing both convenient and cluster sampling. The methodology used in this study is one of comparing the sample fifth grade students' math scores on a multiple-choice formatted test to their scores on an alternative assessment. Results from the study indicate that in every instance of comparing the scores by gender, ethnicity, socio-economic status and math objective the mean scores posted from the multiple-choice formatted test were higher than those posted by the open-ended assessment.

**Alternative Assessment, Math Matters Book** Lynch, Olmstead. 1997-08-31

**Assessment in Middle and High School Mathematics** Daniel Brahier. 2013-10-30 It describes each strategy and clarifies its advantages and drawbacks. Also included is a large sample of classroom-tested examples along with sample student responses. These examples can be used as is - or you can customize them for your own class. This book will help prepare your students for standardized tests that include items requiring evidence of conceptual understanding. The strategies reflect the assessment Standards benchmarks established by the NCTM. In addition, an entire chapter is devoted to help teachers use these assessments to arrive at their students' grades.

*Learning About Assessment, Learning Through Assessment* National Research Council, Mathematical Sciences Education Board, Deborah Bryant, Mark Driscoll. 1998-08-14 The MSEB, with generous support and encouragement from the Carnegie Corporation of New York, seeks to bring discussion of assessment to school- and district-based practitioners through an initiative called Assessment in Practice (AIP). Originally conceived as a series of next steps to follow the publication of *Measuring Up* and *For Good Measure*, the project, with assistance from an advisory board, developed a publication agenda to provide support to teachers and others directly involved with the teaching and assessment of children in mathematics classrooms at the elementary, middle, and high school levels. In a series of three booklets, AIP presents an exploration of issues in assessment. The first booklet, *Learning About Assessment, Learning Through Assessment* discusses ways to assist teachers in learning about assessment and how student work can be a rich resource in professional development. The second, *Assessment in Support of Instruction*, makes a case for aligning assessments with state and district curriculum frameworks and examines ways in which states have shifted their curriculum frameworks and related state assessment programs to reflect the NCTM Standards and other perspectives. The third booklet, *Keeping Score*, discusses issues to be considered while developing high quality mathematics assessments. This series is specifically designed to be used at the school and school district level by teachers, principals, supervisors, and measurement specialists.
