Medical Terminology Using Word Building Student Text Catherine Kurtz.2004-01 This is a great course for beginner, the experienced, and everyone in between! This course teaches what we call 'Word Building', which is the knowledge of how all medical words are structured. It's a quick, efficient and amazingly easy way for anyone to learn medical terminology. You learn how to recognize the meaning of a medical term by dividing the word into its three basic component parts: the prefix, root and suffix. By knowing the meanings of the prefixes, suffixes, and root words, you can easily make sense of a medical term. This course is designed for the healthcare claims biller, the medical insurance claims adjuster, the medical office worker, or anyone wanting to learn medical terminology. The course takes the average person 3 weeks or less to complete based on a study time of 1-2 hours per day. This book is identical to the Version 2 book except that the Exercise Answers and the Test Answers have been removed.

Medical Terminology Online for Building a Medical Vocabulary Leonard.2005-11-17 The revision of Medical Terminology Online to accompany Building a Medical Vocabulary supplements the new 6th edition of the textbook. The online course is organized by body system and offers a wide range of auditory and visual elements and various interactive exercises. These elements amplify text content, synthesize concepts presented in the text, reinforce learning, and demonstrate the practical application of medical language with the use of media-rich content, including animations and slide shows with audio narrations. The content and functionality of this online course helps the student develop the specialized vocabulary needed in the clinical setting and the word analysis skills needed to define unfamiliar terms when they are encountered. Course management software (available in Evolve, Blackboard, or WebCT versions) provides platform for deploying course online with features such as real-time chat, calendar, e-mail connections, bulletin board, grade book, and instructor syllabus. Wealth of interactive exercises include word building, identification, spelling, image association, pronunciation, matching, true or false, fill-in, case studies, etc. and offer frequent opportunities to recall and recognize medical terms with the goal of rehearsing them into long-term memory. Most modules include a web site activity that takes the learner to a specific topic online and then asks questions pertaining to the site and the course topic. Some modules include a medical record activity that requires students to look for information in the medical record that will test their knowledge of medical terminology. Over 450 anatomical illustrations, over 650 disease and disorder illustrations, and many new drawings and graphics visually reinforce learning. Animations and slide shows include audio narration to demonstrate physiologic processes and help to communicate difficult concepts that are impossible to convey with static illustrations. Pedagogical icons alert students to the unique elements within the program (such as Factoids, Learning Links, and Discussion Topics), to promote interactive learning and link students to instructor and one another. Hypertext links direct students to related web site resources for further study. Bolded and linked terms within text connect students to definitions and audio pronunciations of terms and make access to the glossary quick and easy while also enabling students to hear the term pronounced correctly. Extensive glossary of over 5,000 terms, including definitions, listed in alpha order. Students can click on any term in the glossary and hear it pronounced in English and Spanish. Students can evaluate their mastery of module content by completing the Self-Mastery Quiz at the end of each module before taking the Self-Mastery Exam. New medical records activity requires students to locate answers to questions related to medical terminology in mock medical reports. Expanded threaded case studies present a patient with a particular medical condition that pertains to the body system being discussed. The patient is revisited throughout each section of the module, keeping the student engaged and providing a real-world application. The threads are expanded throughout each module and include more terms within the case, encouraging the student to apply their knowledge of the terms. Offers on-screen audio Spanish pronunciation for all glossary terms along with a separate English glossary with over 5,000 terms. More and improved interactive exercises are placed as mini-activities throughout the lessons giving the student the opportunity to test their knowledge in smaller chunks. More end-of-module case studies are included, each with a patient photo to further engage the student. Questions follow that utilize the terms describing the condition in the case study. New terms and abbreviations reflect advances in technology and changes in the health care delivery system, including bioterrorism and SARS. New design, based on the new book design, with an overall interface enhancement.
