Case Studies of Teacher Development Barbara B. Levin.2003-01-30 This book represents the results of a 15-year longitudinal study based on in-depth case studies of the development of four teachers' pedagogical thinking. These studies illustrate how teachers' thinking--about children's behavior, development, learning, and teaching--develops over time, based on their personal and professional life experiences. It is an especially significant book because understanding how pedagogical thought develops over time and how these ideas are put into action in classrooms can be used to improve teacher education, teacher induction, and teacher retention programs. *Case Studies of Teacher Development: An In-Depth Look At How Thinking About Pedagogy Develops Over Time*: *provides insight into reasons why some teachers remain and others leave the teaching profession; *combines narrative with scholarship; *highlights the voices of four educators through extensive quotes from their interviewees, includes vignettes of their classroom teaching, and incorporates their own writing; *contributes to the field of teacher education and teacher development because of the long duration of the four case studies (1985-2000) and the accompanying scholarly analysis of internal and external influences on their lives as teachers; and *addresses changes in the nature of qualitative research as it influenced this longitudinal study over time. At a time when teacher induction and teacher retention are critically important, this book will help teacher educators, school and district leaders, and policymakers understand better how to retain novice and experienced teachers by supporting their professional growth and development.

Charlie Piechart and the Case of the Missing Pizza Slice Marilyn Sadler, Eric Comstock.2015-09-01 With a dinnertime mystery and 5 hungry suspects, Charlie Piechart makes fractions fun. Charlie Piechart has a piechart for a belly, and it's a belly that's perfect for showing fractions. In his first mystery, perfect for little math enthusiasts, it's pizza night at the Piecharts' house. How about veggies on top? "NO VEGGIES!" yell $\frac{4}{6}$ of the pizza eaters. No one wants anchovies, either. They like Charlie's idea best: pepperoni. But with 6 pizza eaters, 3 sizes of pizza on the delivery menu, and 2 slices allotted for each person, it is no surprise when there's a mystery! A scream from Charlie's sisters reveals the issue: 1 out of 12 slices has gone missing. So who did it? Charlie counts the suspects and questions each one (except Mom!). But could he be forgetting someone? This colorful, hysterical mystery adventure is perfect for both reluctant and enthusiastic math learners. Great for fans of *G Is for Googol*, *Sir Cumference* and the *First Round Table*, and *Math Curse*. Correlates to the Common Core State Standards in English Language Arts

Reading Literacy in the United States Marilyn R. Binkley, Trevor Williams.1996 Using data from the 1991 IEA (International Association for the Evaluation of Educational Achievement) Reading Literacy Study, a study compared United States fourth- and ninth-grade students to students in 32 other countries; examined relationships between reading comprehension and aspects of family, schooling, and community; and investigated the nature of reading instruction in American classrooms. National samples of classes at the grade level containing the most 9-year-olds and 14-year-olds were used. A world average was constructed of the 18 participating nations that are also members of the Organization for Economic Cooperation and Development (OECD). Results indicated that (1) American fourth graders outperformed students from all other countries except Finland; (2) American ninth graders' performance was closely grouped with that of students from 15 other nations; (3) in the United States, White students read better than Black and Hispanic students; (4) most groups of American students outperformed the OECD average; (5) students whose parents did not finish high school read at about the same level as the OECD average at fourth grade, but fell below the average in the ninth grade; (6) when differences in wealth, race/ethnicity, level of parental education, and other related attributes were taken into account, children from one-parent mother-only families did as well as children from two-parent families; (7) parents' educational attainment influenced reading comprehension over and above other aspects of family background; (8) what teachers said they believed about reading instruction differed markedly from what they actually did and had students do. (Contains 70 references, 43 notes, 4 exhibits, 3 tables, and 29 figures of data.) (RS)
