**THINK Like a Nurse!** Keith A. Rischer. 2013-09-03 About: To prepare you for real world practice, this book will highlight content areas most relevant to the bedside and why they must be mastered and understood. To help visualize the professional development that is needed as you transition to the responsibilities of the professional nurse, I use the metaphor of building a house; not a static structure, but a unique, vibrant living house that is a reflection of how you choose to build and add to it over time. Nursing is a living and vibrant practice that requires your personal involvement and engagement to promote the well-being of those you care for. The components of this living home include: Foundation: A house must have a firm and stable foundation. The ethical comportment or the art of nursing is this foundation for every nurse. Caring behaviors, nurse engagement, and professionalism in practice must be present or your nursing practice could be on shaky ground

before it even begins! Walls: The applied sciences of nursing: pharmacology, fluid and electrolytes, and anatomy and physiology. I contextualize these sciences to the bedside so the relevance of mastering this content becomes apparent. Roof: Critical thinking and clinical reasoning, which is the thinking that is required by the nurse that completes the house and ties everything together. Skeletons in the closet: Every house has closets and some have a few skeletons in them! Incivility and men in nursing will be explored in detail!

**Clinical Reasoning: Knowledge, Uncertainty, and Values in Health Care** Daniele Chiffi.2021  
This book offers a philosophically-based, yet clinically-oriented perspective on current medical  
reasoning aiming at 1) identifying important forms of uncertainty permeating current clinical  
reasoning and practice 2) promoting the application of an abductive methodology in the health  
context in order to deal with those clinical uncertainties 3) bridging the gap between biomedical  
knowledge, clinical practice, and research and values in both clinical and philosophical literature.  
With a clear philosophical emphasis, the book investigates themes lying at the border between  
several disciplines, such as medicine, nursing, logic, epistemology, and philosophy of science; but  
also ethics, epidemiology, and statistics. At the same time, it critically discusses and compares  
several professional approaches to clinical practice such as the one of medical doctors, nurses and  
other clinical practitioners, showing the need for developing a unified framework of reasoning,  
which merges methods and resources from many different clinical but also non-clinical disciplines.  
In particular, this book shows how to leverage nursing knowledge and practice, which has been  
considerably neglected so far, to further shape the interdisciplinary nature of clinical reasoning.

Furthermore, a thorough philosophical investigation on the values involved in health care is provided, based on both the clinical and philosophical literature. The book concludes by proposing an integrative approach to health and disease going beyond the so-called classical biomedical model of care.

**The Essentials of Clinical Reasoning for Nurses: Using the Outcome-Present State Test Model for Reflective Practice** RuthAnne Kuiper, Sandra M. O'Donnell, Daniel J. Pesut, Stephanie L. Turrise. 2017-05-24 In today's healthcare environment of scarce resources and challenges related to safety and quality, nurses must make decision after decision to ensure timely, accurate, and efficient provision of care. Solid decision-making, or lack thereof, can significantly affect patient care and outcomes. Clinical reasoning - how a nurse processes information and chooses what action to take - is a skill vital to nursing practice and split-second decisions. And yet, developing the clinical reasoning to make good decisions takes time, education, experience, patience, and reflection. Along the way, nurses can benefit from a successful, practical model that demystifies and advances clinical reasoning skills. In *The Essentials of Clinical Reasoning for Nurses*, authors RuthAnne Kuiper, Sandra O'Donnell, Daniel Pesut, and Stephanie Turrise provide a model that supports learning and teaching clinical reasoning, development of reflective and complex thinking, clinical supervision, and care planning through scenarios, diagnostic cues, case webs, and more.

Clinical Reasoning and Evidence-Based Practice Jos Dobber, José Harmsen, Margriet van Iersel.2023-10-02 This book helps nursing students increase the quality of their clinical reasoning and therefore the quality of care. It teaches students to recognize when clinical reasoning is needed, and what reasoning is involved, and to avoid reasoning errors. This is important for nurses, since good quality of their clinical reasoning leads to a good quality of their decisions. Thus, it is directly connected to better nursing care. This volume is based on current knowledge about learning complex cognitive skills. From this knowledge, four sets of standard questions have been formulated that allow students to develop cognitive scripts for reasoning about diagnosis, etiology, prognosis, and interventions. Special attention is paid to diversity-sensitive reasoning in this English edition.

From the 4C/ID model, a scientific educational whole task model for learning and developing and complex cognitive skills, complexity levels, learning tasks and subtask exercises are included. Learning clinical reasoning is supported with case videos and flash lectures, among other things. It consists of three parts: the first part, on clinical reasoning, is written for first- and second-year bachelor students in nursing. Part two, on evidence-based practice (EBP), is also suitable for later years. It teaches students to read and critically appraise scientific articles, and to assess whether they can be used in their own practice. Part three contains more in-depth information, extra explanations, examples, and material that teachers can use in a flexible way. This book is illustrated with videos. The translation from Dutch to English was done with the help of artificial intelligence (machine translation by the service DeepL.com). The authors have subsequently revised the text further in an endeavour to refine the work stylistically.
