**Product-Focused Software Process Improvement** Frank Bomarius, Markku Oivo, Päivi Jaring, Pekka Abrahamsson. 2009-06-18 On behalf of the PROFES Organizing Committee we are proud to present the proceedings of the 10 International Conference on Product Focused Software Process - improvement (PROFES 2009), held in Oulu, Finland. Since the first conference in 1999, the conference has established its place in the software engineering community as a respected conference that brings together participants from academia and industry. The roots of PROFES are in professional software process improvement motivated by product and service quality needs. The conference addresses both the solutions found in practice as well as relevant research results from academia. To ensure that PROFES retains its high quality and focus on the most relevant research issues, the conference has actively maintained close collaboration with industry and subsequently widened its scope to the research areas of collaborative and agile software development. A special focus for 2009 was placed on software business to bridge research and practice in the economics of software engineering. This enabled us to cover software development in a more comprehensive manner and tackle one of the most important current challenges identified by the software industry and software research community - namely, the shift of focus from "products" to "services." The current global economic downturn emphasizes the need for new methods and solutions for fast and business-oriented development of products and services in a globally distributed environment.

**Business Ethics and Critical Consultant Jokes** Onno Bouwmeester.2022-10-31 This open access book offers four ways to enrich traditional research methods in business ethics. By looking at critical jokes and cartoons on management consultants, their business practice and their clients' demands, many ethical transgressions in business get addressed. By illustrating and criticizing such transgression, jokes can serve as an example in a theoretical argument, as a prompt to reflect on in an open interview, as a statement to assess in an enquiry or as basis for qualitative content analysis. By adding jokes to the conversation on ethical transgressions in business much depth and honesty can be added, resulting in better research data. Jokes can help to surpass social desirability bias included in answers given in traditional interview settings or enquiries. This book is of interest to consultants, researchers, educators and students in business ethics and management. The book showcases what kind of practical and ethical wisdom is embedded in business jokes and how this knowledge can be made productive in the context of business ethics.

**Digitizing Diagnosis** Andrew S. Lea.2023-07-25 A fascinating history of the first attempts to computerize medical diagnosis. Beginning in the 1950s, interdisciplinary teams of physicians, engineers, mathematicians, and philosophers began to explore the possible application of a new digital technology to one of the most central, and vexed, tasks of medicine: diagnosis. In *Digitizing Diagnosis*, Andrew Lea examines these efforts—and the larger questions, debates, and transformations that emerged in their wake. While surveying the continuities spanning the analog

and digital worlds of medicine, Lea uncovers how the introduction of the computer to medical diagnosis reconfigured the identities of patients, diseases, and physicians. Debates about how and whether to apply computers to the problem of diagnosis, he demonstrates, were animated by larger concerns about the nature of medical reasoning, the definitions of disease, and the authority and identity of physicians and patients. In their attempts to digitize diagnosis, these interdisciplinary groups of researchers repeatedly came up against fundamental moral and philosophical questions. How should doctors classify diseases? Could humans understand, and come to trust, the opaque decision-making processes of machines? And how might computerized systems circumvent—or calcify—bias? As medical algorithms become more deeply integrated into clinical care, researchers, clinicians, and caregivers continue to grapple with these questions today.
