Making Schools Work Eric A. Hanushek. 2010-12-01 Educational reform is a big business in the United States. Parents, educators, and policymakers generally agree that something must be done to improve schools, but the consensus ends there. The myriad of reform documents and policy discussions that have appeared over the past decade have not helped to pinpoint exactly what should be done. The case for investment in education is an economic one: schooling improves the productivity and earnings of individuals and promotes stronger economic growth and better functioning of society. Recent trends in schooling have, however, lessened the value of society's investments as costs have risen dramatically while student performance has stayed flat or even fallen. The task is to improve performance while controlling costs. This book is the culmination of extensive discussions among a panel of economists led by Eric Hanushek. They conclude that economic considerations have been entirely absent from the development of educational policies and that economic reality is sorely needed in discussions of new policies. The book outlines an improvement plan that emphasizes changing incentives in schools and gathering information about effective approaches. Available research and analysis demonstrates that current central decisionmaking has worked poorly. Concentrating on inputs such as pupil-teacher ratios or teacher graduate degrees appears quite inferior to systems that directly reward performance. Nonetheless, since experience with such alternatives is very limited, a program of extensive evaluation appears to be in order. Attempts to institute radical change on the basis of currently available information involve substantial risks of failure. Many people today find proposals such as charter schools, expanded use of merit pay, or educational vouchers to be appealing. Yet there is little evidence of

their effectiveness, and widespread adoption of these proposals is sure to run into substantial problems of implementation. Instead of choosing the right approach, this book advocates a more systematic approach of experimentation, evaluation, and change. In addition to Hanushek, the contributors are Charles S. Benson, University of California, Berkeley; Richard B. Freeman, Harvard University; Dean T. Jamison, UCLA; Henry M. Levin, Stanford University; Rebecca A. Maynard, University of Pennsylvania; Richard J. Murnane, Harvard University; Steven G. Rivkin, Amherst College; Richard H. Sabot, Williams College; Lewis C. Solmon, Milken Institute for Job and Capital Formation; Anita A. Summers, University of Pennsylvania; Finis Welch, Texas A&M University; and Barbara L. Wolfe, University of Wisconsin.

PoC or GTFO Manul Laphroaig. 2017-10-31 This highly anticipated print collection gathers articles published in the much-loved International Journal of Proof-of-Concept or Get The Fuck Out. PoC||GTFO follows in the tradition of Phrack and Uninformed by publishing on the subjects of

offensive security research, reverse engineering, and file format internals. Until now, the journal has only been available online or printed and distributed for free at hacker conferences worldwide. Consistent with the journal's quirky, biblical style, this book comes with all the trimmings: a leatherette cover, ribbon bookmark, bible paper, and gilt-edged pages. The book features more than 80 technical essays from numerous famous hackers, authors of classics like Reliable Code Execution on a Tamagotchi, ELF's are Dorky, Elves are Cool, Burning a Phone, Forget Not the Humble Timing Attack, and A Sermon on Hacker Privilege. Twenty-four full-color pages by Ange Albertini illustrate many of the clever tricks described in the text.

Closing the Feedback Loop Björn-Sören Gigler, Savita Bailur. 2014-05-22 Enhanced transparency, accountability, and government or donor responsiveness to people needs are imperative to achieve better and more sustainable development results on the ground. The rapid spread of new technologies is transforming the daily lives of millions of poor people around the world and has the potential to be a real game changer for development. Improved accountability and responsiveness are critical for reaching the goals of eliminating extreme poverty and promoting shared prosperity with a focus on improving the well-being of the most vulnerable and marginalized groups in society. Within the broader political economy context, many questions remain unanswered about the role that new technologies can play to act as an accelerator for closing the accountability gap. Within this context, this report brings together new evidence from leading academics and practitioners on the effects of technology-enabled citizen engagement. The report aims to address the following four

main questions: how do new technologies empower communities through participation, transparency, and accountability?; are technologies an accelerator for closing the accountability gap - the space between supply (governments, service providers) and demand (citizens, communities, civil society organizations) that must be bridged for open and collaborative governance?; under what conditions does this occur?; and what are the experiences and lessons learned from existing grassroots innovators and donor-supported citizen engagement and crowdsourcing programs, and how can these programs be replicated or scaled up?. The report presents a theoretical framework about the linkages between new technologies, participation, empowerment, and the improvement of poor people's human well-being based on Amartya Sen's capability approach. The book provides rich case studies about the different factors that influence whether or not information and communication technology (ICT)-enabled citizen engagement programs can improve the delivery and quality of public services to poor communities. The report analyzes in depth both the factors and process of using new technologies to enhance the delivery of primary health services to pregnant women in Karnataka, India, and of several community mapping and crowdsourcing programs in Guinea, Haiti, Kenya, Libya, Sudan, and other countries.

What Do Science, Technology, and Innovation Mean from Africa? Clapperton Chakanetsa Mavhunga.2017-06-16 Explorations of science, technology, and innovation in Africa not as the product of “technology transfer” from elsewhere but as the working of African knowledge. In the STI literature, Africa has often been regarded as a recipient of science, technology, and innovation rather than a maker of them. In this book, scholars from a range of disciplines show that STI in Africa is not merely the product of “technology transfer” from elsewhere but the working of African knowledge. Their contributions focus on African ways of looking, meaning-making, and creating. The chapter authors see Africans as intellectual agents whose perspectives constitute authoritative knowledge and whose strategic deployment of both endogenous and inbound things represents an African-centered notion of STI. “Things do not (always) mean the same from everywhere,” observes Clapperton Chakanetsa Mavhunga, the volume's editor. Western, colonialist definitions of STI are not universalizable. The contributors discuss topics that include the trivialization of indigenous knowledge under colonialism; the creative labor of chimurenga, the transformation of everyday surroundings into military infrastructure; the role of enslaved Africans in America as innovators and

synthesizers; the African ethos of “fixing”; the constitutive appropriation that makes mobile technologies African; and an African innovation strategy that builds on domestic capacities. The contributions describe an Africa that is creative, technological, and scientific, showing that African STI is the latest iteration of a long process of accumulative, multicultural knowledge production. Contributors Geri Augusto, Shadreck Chirikure, Chux Daniels, Ron Eglash, Ellen Foster, Garrick E. Louis, D. A. Masolo, Clapperton Chakanetsa Mavhunga, Neda Nazemi, Toluwalogo Odumosu, Katrien Pype, Scott Remer

Junctionless Field-Effect Transistors Shubham Sahay, Mamidala Jagadesh Kumar. 2019-01-28 A comprehensive one-volume reference on current JLFET methods, techniques, and research Advancements in transistor technology have driven the modern smart-device revolution—many cell phones, watches, home appliances, and numerous other devices of everyday usage now surpass the performance of the room-filling supercomputers of the past. Electronic devices are continuing to become more mobile, powerful, and versatile in this era of internet-of-things (IoT) due in large part to the scaling of metal-oxide semiconductor field-effect transistors (MOSFETs). Incessant scaling of the conventional MOSFETs to cater to consumer needs without incurring performance degradation requires costly and complex fabrication process owing to the presence of metallurgical junctions. Unlike conventional MOSFETs, junctionless field-effect transistors (JLFETs) contain no metallurgical junctions, so they are simpler to process and less costly to manufacture. JLFETs utilize a gated semiconductor film to control its resistance and the current flowing through it. Junctionless Field-Effect Transistors: Design, Modeling, and Simulation is an inclusive, one-stop reference on the study and research on JLFETs This timely book covers the fundamental physics underlying JLFET operation, emerging architectures, modeling and simulation methods, comparative analyses of JLFET performance metrics, and several other interesting facts related to JLFETs. A calibrated simulation framework, including guidance on Sentaurus TCAD software, enables researchers to investigate JLFETs, develop new architectures, and improve performance. This valuable resource: Addresses the design and architecture challenges faced by JLFET as a replacement for MOSFET Examines various approaches for analytical and compact modeling of JLFETs in circuit design and simulation Explains how to use Technology Computer-Aided Design software (TCAD) to produce

numerical simulations of JLFETs Suggests research directions and potential applications of JLFETs Junctionless Field-Effect Transistors: Design, Modeling, and Simulation is an essential resource for CMOS device design researchers and advanced students in the field of physics and semiconductor devices.

Winning Across Global Markets Dan Steinbock. 2010-03-10 Lessons for attaining global competitiveness, one market at a time, from international business giant Nokia *Winning Across Global Markets* examines how 145-year-old Nokia grew from a paper mill in Finland to a multinational telecommunications leader. Why are Nokia's lessons critical for other companies and industries? While multinationals based in large countries benefit from inherent advantages--such as a home base that often accounts for 30 to 50 percent of their revenues--multinationals based in smaller countries such as Nokia, enjoy no such competitive edge. Nokia, in fact, generates less than 1% of its revenues in its home base. To such a company, global competitiveness is a matter of life and death. With unparalleled access to Nokia's leadership, *Winning Across Global Markets* reveals the remarkable story of Nokia's resilience and endurance. Shows how Nokia's flexibility and focus on

its people and local markets drive its distinct global approach. Includes exclusive interviews with Nokia's senior executives and key partners Provides a roadmap for developing, capturing, and sustaining global advantage This book provides a roadmap for developing, capturing, and sustaining strategic global advantage in today's ever-changing world.

Globalization, Deglobalization, and New Paradigms in Business Justin Paul, Sanjay Dhir. 2021-10-18

This book analyzes the changing dynamics of competition and the emergence of deglobalization trends and processes. The authors begin by explaining the role of technology on globalization and its impact on competitive strategy. Then, they present a theoretical framework that outlines the connection between globalization and modern society. The book also delves into the shift toward deglobalization and addresses how the onset of the COVID-10 pandemic has accelerated the process. Concluding with a discussion of how the 4th Industrial Revolution has resulted in new paradigms for business, this book will fill a gap through its investigation of an emerging concept for scholars in international business.
