*How to Build Glued-lapstrake Wooden Boats* John Brooks,Ruth Ann Hill.2004 As a child, John Brooks loved to build models and sail with his grandfather. When most teenagers were at the prom, John was changing jibs in the Indian Ocean, halfway through a 35,000-mile, two-year cruise. He began building boats in commercial yards at 19, while studying boat design and building his own boats. John worked for many years honing his craftsmanship on fine yachts, small boats, custom furniture, and a harpsichord. He has been an instructor at the WoodenBoat School in Maine since the mid-1990s, teaching glued-lapstrake boatbuilding, fine interior joinery, and carving. Ruth Ann Hill grew up on the coast of Maine. A writer, boatbuilding assistant, naturalist, and graphic artist, Ruth is the author of *Discovering Old Bar Harbor* and *Acadia National Park: An Unconventional Guide* and a contributing editor for *Maine Boats & Harbors* magazine. their historic models from a kit. From the initial planning and kit selection through the various stages of construction, Julier takes the myth and mystery out of what many consider to be a complex subject, using easy-to-follow explanations, simple terminology, and more than one-hundred photographs to help modelers complete their projects. Some of the many topics covered include: adhesives, finishes, and fixings; tools, maintenance and safety; history and accuracy; hull planking; wales and rails; stern and quarter galleries; sails; yards and spars; standard running and rigging; kit manufacturers and available products; and much more. Pointing out the pitfalls of modeling and how to avoid them, Julier's latest guide will be of particular interest to beginning and intermediate modelers, but more experienced hands will also find much of value.

Model-making David Neat. 2013-12-21 Model-making: Materials and Methods focuses primarily on the wide variety of materials that can be employed to make models; those which have been favoured for a while and those which are relatively new. The book looks at how these materials behave and how to get the best out of them, then illustrates a range of relatively simple methods of building, shaping, modelling, surfacing and painting with them. Useful features of the book include: the different uses of models in various disciplines; the sequence of making; planning and construction, creating surfaces, painting and finishing; methods of casting, modelling and working with metals; step-by-step accounts of the making of specially selected examples; simple techniques without the need for expensive tools or workshop facilities; a 'Directory' of a full range of materials, together with an extensive list of suppliers. This book is intended for students of theatre production, art & architecture, animation and theatre/television set designers where accurate scale models are necessary, and is also of interest to anyone involved with the process of making forms in 3D and the challenge of making small-scale forms in general. Superbly illustrated with 185 colour photographs.

**Boatbuilding Down East** Royal Lowell.2002-01-10 The Maine lobsterboat is known and admired all over the country. This is a book on how to build one of these beautiful boats from start to finish. Over the years, many hundreds of these craft have been built so hat the methods of construction details have been worked out and refined to an unusual degree. For their size, these lobseterboats withstand some of the harshest possible use, as most of them fish all winter off the stormy coast of Maine. Such a boat has to be good to survive. There are differences in the boats from one part of the coast to another, and from one boat to another within an area. But the boats from Beals Island and Jonesport have always been highly regarded, especially for their graceful good looks and high speed. The late Will Frost's boats were always advanced for their day, and it was not at all strange that during Prohibition his shops on Beals Island and Jonesport were engaged to build some fast, high-powered rumrunners. His influence has much to so with the modern Maine lobsterboat as we know it today. Not a little of Will Frost's thinking about lobsterboats was passed on to his grandson Royal Lowell, the author of this book.

**The Gougeon Brothers on Boat Construction** Meade Gougeon,Joe Gougeon,Jan Gougeon,Gougeon Brothers.1985 Excellect illustrations and pictures. **Ship Models from the Age of Sail** Kerry Jang.2022-03-15 Most period ship models are built from kits, usually primarily of wood with some ready-made fittings. Although these commercial offerings have improved significantly in recent years, all of them can be enhanced in accuracy or detail by an experienced modelmaker. This book, by an expert ship modeler, distills lessons gleaned from a

lifetime practicing the hobby to the highest standards, setting out methods of improving basic kits and gradually developing the skills and confidence to tackle the construction of a model from scratch. Using a variety of kits as the starting point, each chapter demonstrates a technique that can be readily improved or a feature that can be replaced to the advantage of the finished model. Topics include hull planking, representing copper sheathing, many aspects of more accurate masting and rigging, and how to replace kit parts and fittings from scratch. Ultimately, the impact of a period model depends on its accuracy, and the book also provides guidance on plans and references, where to find them and how they are best used. Offering advice, expertise and inspiration, *Ship Models from the Age of Sail* has something for anyone interested in building a period ship model, whatever their level of skill.

**RMS Titanic** Peter Davies-Garner.2005-07-30 The expert ship modeler offers a fully illustrated guide to building the RMS Titanic, with practical information applicable to models of any scale. Ship Modeling Simplified: Tips and Techniques for Model Construction from Kits Frank

Mastini.1990-03-22 In *Ship Modeling Simplified*, master model builder Frank Mastini puts to paper the methods he's developed over 30 years at the workbench to help novices take their first steps in an exciting pastime. You don't need the deftness of a surgeon or the vocabulary of an old salt to build a model. What you need is an understanding coach. Mastini leads readers from the mysteries of choosing a kit and setting up a workshop through deciphering complicated instructions and on to painting, decorating, and displaying finished models--with patience and clarity, not condescension. He reveals dozens of shortcuts: How to plank a hull egg-shell tight; how to build and rig complicated mast assemblies without profanity; how to create sails that look like sails. . . . And along the way he points out things that beginners usually do wrong--beforehand, not after they've taken hammers to their projects. *Ship Modeling Simplified* even includes an Italian-English dictionary of nautical terms, the key to assembling the many high-quality Italian kits on the American market. Model building is fun, and not nearly as difficult as some experts would have you believe. Here is everything you'll ever need to get started in a hobby that will last a lifetime.

**Miniature Ship Models** Paul Jacobs.2008-05-30 This book is the first comprehensive history of how the 1:1200 scale and its 1:1250 continental equivalent became accepted as the modern standard for miniature ship models. The origins can be traced back to the first years of the twentieth century and their use as identification aids by the military during the First World War, but when peace came the manufacturers aimed their increasingly sophisticated products at collectors, and acquiring, modifying or scratch-building miniature ship models has been an avidly pursued hobby ever since. This book charts the commercial rise and fall of the manufacturers, and the advancing technology

that produces ever more detailed and accurate replicas. The author - himself a lifetime collector and builder of models - looks at the products of each manufacturer, past and present, rating their quality and suggesting why some are regarded as more collectible than others. But the book deals with more than off-the-shelf models, covering subsidiary issues like painting, modifying and diorama settings, and is illustrated throughout with many of the finest examples of the genre. The combination of fascinating background information with stunning visual presentation will make this book irresistible to any collector or enthusiast.
