Animalising Affliction of Nebuchadnezzar in Daniel 4 Peter Joshua Atkins.2022-12-29 This is a detailed investigation into the nature of Nebuchadnezzar's animalising affliction in Daniel 4 and the degree to which he is depicted as actually becoming an animal. PeterAtkins examines two predominant lines of interpretation: either Nebuchadnezzar undergoes a physical metamorphosis of

some kind into an animal form; or diverse other readings that specifically preclude or deny an animal transformation of the king. By providing an extensive study of these interpretative opinions, alongside innovative assessments of ancient Mesopotamian divine-human-animal boundaries, Atkins ultimately demonstrates how neither of these traditional interpretations best reflect the narrative events. While there have been numerous metamorphic interpretations of Daniel 4, these are largely reliant upon later developments within the textual tradition and are not present in the earliest edition of Nebuchadnezzar's animalising affliction. Atkins' study displays that when Daniel 4 is read in the context of Mesopotamian texts, which appear to conceive of the human-animal boundary as being indicated primarily in relation to possession or lack of the divine characteristic of wisdom, the affliction represents a far more significant categorical change from human to animal than has hitherto been identified.

A Companion to Contemporary Art in a Global Framework Amelia Jones, Jane Chin

Davidson.2023-12-26 WILEY BLACK WELL COMPANIONS TO ART HISTORY A Companion to Contemporary Art in a Global Framework A Companion to Contemporary Art in a Global Framework explores the ways specialists and institutions in the fine arts, curation, cultural studies, and art history have attempted to situate art in a more global framework since the 1980s. Offering analyses of the successes and setbacks of these efforts to globalize the art world, this innovative volume presents a new and exciting way of considering art in its global contexts. Essays by an international panel of leading scholars and practicing artists assert that what we talk about as 'art' is essentially a Western concept, thus any attempts at understanding art in a global framework require a revising of established conceptual definitions. Organized into three sections, this work first reviews the history and theory of the visual arts since 1980 and introduces readers to the emerging area of scholarship that seeks to place contemporary art in a global framework. The second section traces the progression of recent developments in the art world, focusing on the historical and cultural contexts surrounding efforts to globalize the art world and the visual arts in particular global and transnational frameworks. The final section addresses a wide range of key themes in contemporary art, such as the fundamental institutions and ontologies of art practice, and the interactions among art, politics, and the public sphere. A Companion to Contemporary Art in a Global Framework is essential reading for undergraduate and graduate students, scholars, researchers, and general readers interested in exploring global art beyond the traditional Euro-American context.

Vermeer's Hat Timothy Brook. 2010-08-01 In this critical darling Vermeer's captivating and enigmatic paintings become windows that reveal how daily life and thought--from Delft to Beijing--were transformed in the 17th century, when the world first became global. A Vermeer painting shows a military officer in a Dutch sitting room, talking to a laughing girl. In another canvas, fruit spills from a blue-and-white porcelain bowl. Familiar images that captivate us with their beauty--but as Timothy Brook shows us, these intimate pictures actually give us a remarkable view of an expanding world. The officer's dashing hat is made of beaver fur from North America, and it was beaver pelts from America that financed the voyages of explorers seeking routes to China--prized for the porcelains so often shown in Dutch paintings of this time, including Vermeer's. In this dazzling

history, Timothy Brook uses Vermeer's works, and other contemporary images from Europe, Asia, and the Americas to trace the rapidly growing web of global trade, and the explosive, transforming, and sometimes destructive changes it wrought in the age when globalization really began.

Pixels & Paintings David G. Stork.2023-11-15 PIXELS & PAINTINGS “The discussion is firmly grounded in established art historical practices, such as close visual analysis and an understanding of artists’ working methods, and real-world examples demonstrate how computer-assisted techniques can complement traditional approaches.” —Dr. Emilie Gordenker, Director of the Van Gogh Museum The pioneering presentation of computer-based image analysis of fine art, forging a dialog between art scholars and the computer vision community In recent years, sophisticated computer vision, graphics, and artificial intelligence algorithms have proven to be increasingly powerful tools in the study of fine art. These methods—some adapted from forensic digital photography and others developed specifically for art—empower a growing number of computer-savvy art scholars, conservators, and historians to answer longstanding questions as well as provide new approaches to the interpretation of art. Pixels & Paintings provides the first and authoritative overview of the broad range of these methods, which extend from image processing of palette, marks, brush strokes, and shapes up through analysis of objects, poses, style, composition, to the computation of simple interpretations of artworks. This book stresses that computer methods for art analysis must always incorporate the cultural contexts appropriate to the art studies at hand—a blend of humanistic and scientific expertise. Describes powerful computer image analysis methods and their application to problems in the history and interpretation of fine art Discusses some of the art historical lessons and revelations provided by the use of these methods Clarifies the assumptions and applicability of methods and the role of cultural contexts in their use Shows how computation

can be used to analyze tens of thousands of artworks to reveal trends and anomalies that could not be found by traditional non-computer methods Pixels & Paintings is essential reading for computer image analysts and graphics specialists, conservators, historians, students, psychologists and the general public interested in the study and appreciation of art.

Win Harlan Coben.2021-03-16 In this #1 New York Times bestselling thriller from Harlan Coben, a dead man's secrets fall into the hands of a vigilante antihero—drawing him down a dangerous road. Over twenty years ago, the heiress Patricia Lockwood was abducted during a robbery of her family's estate, then locked inside an isolated cabin for months. Patricia escaped, but so did her captors — and the items stolen from her family were never recovered. Until now. On the Upper West Side, a

recluse is found murdered in his penthouse apartment, alongside two objects of note: a stolen Vermeer painting and a leather suitcase bearing the initials WHL3. For the first time in years, the authorities have a lead — not only on Patricia's kidnapping, but also on another FBI cold case — with the suitcase and painting both pointing them toward one man. Windsor Horne Lockwood III — or Win, as his few friends call him — doesn't know how his suitcase and his family's stolen painting ended up with a dead man. But his interest is piqued, especially when the FBI tells him that the man who kidnapped his cousin was also behind an act of domestic terrorism — and that the conspirators may still be at large. The two cases have baffled the FBI for decades, but Win has three things the FBI doesn't: a personal connection to the case; an ungodly fortune; and his own unique brand of justice.

Autobiographical Traditions in Egodocuments Sigurður Gylfi Magnússon.2023-12-14 Using the Icelandic context, Sigurður Gylfi Magnússon examines egodocuments as distinct and fascinating manifestations of microhistory, reflecting on their nature, the circumstances in which they originated, and their strengths and weaknesses for scholarly research. *Autobiographical Traditions in Egodocuments* successfully makes the case for egodocuments being an intriguing part of the material culture of their time, with ample consideration given to the role of the book within individual households and the impact a source such as autobiography has had on people's daily lives. Magnússon also provides an insightful historiographical account of how the egodocument has been used in historical works both in Iceland and elsewhere in the world since the 19th century.

Art and the Historical Film Gillian McIver.2022-11-17 Art and the Historical Film provides an important examination of fine art's impact on filmmaking, grappling with the question of authenticity. From Eugene Delacroix's interpretation of the 1830 French revolution to Uli Edel's version of the Baader-Meinhof Gang, artistic representations of historical subjects are appealing and pervasive. Movies often adapt imagery from art history, including paintings of historical events. Films and art shape the past for us and continue to affect our interpretation of history. While historical films are often argued over for their adherence to the facts, their real problem is realism: how can the past be convincingly depicted? Realism in the historical film genre is often nourished and given credibility by its use of painterly references. This book examines how art-historical images affect historical films by going beyond period detail and surface design to look at how profound ideas about history are communicated through pictures. *Art and the Historical Film: Between Realism and the Sublime* is based on case studies that explore the links between art and cinema, including American independent Western Meek's Cutoff (Kelly Reichardt, 2010), British heritage film Belle (Amma Asante, 2013), and Dutch national epic Admiral (Roel Reiné, 2014). The chapters create immersive worlds that communicate distinct ideas about the past through cinematography, production design, and direction, as the films adapt, reference, and transpose paintings by artists such as Rubens, Albert Bierstadt, and Jacques-Louis David.

Summary of Timothy Brook's Vermeer's Hat Everest Media.2022-06-30T22:59:00Z Please note: This is a companion version & not the original book. Sample Book Insights: #1 I was 20 years old when I bought a bicycle in Amsterdam and cycled southwest across the Low Countries on what would be the final leg of a journey that took me from Dubrovnik on the Adriatic to Ben Nevis in Scotland. I was on my second day out when the light began to fade and the drizzle turned the road under my tires slick. #2 The churches of Delft are decorated with paintings of the interiors that date from the seventeenth century, when the town was Protestant and the Catholic religion was being purged. Vermeer was a headman of the artisans' guild of St. Luke, and he enjoyed a position of honor in the town militia. #3 Vermeer's paintings are the only way to step into his world. However, none of them remain in Delft. They were sold after he died or carted to auctions elsewhere, and now are dispersed among seventeen different galleries. #4 The story of Delft is similar to that of Shanghai, if we consider the two cities' histories from a different perspective. Delft was built on land that had once been under the ocean, and it depended on water sluices to drain the bogs on which it rests.

Compensating Landowners in the Vicinity of Airports Magdalena Habdas.2023-11-22 The purpose of this book is to consider the neighbour conflict arising between airports and neighbouring owners of land, particularly with residential uses, as well as to assess the existing solutions applied

to manage or resolve that conflict. The book explains why the neighbour conflict between the airport and landowners is of a particular kind and what legal instruments are applied to address it in an attempt to balance the interests of opposing parties. Readers will develop an understanding of how the law operates when damage is caused by a legal act of the government and what the limits of compensable loss are. In addition, the reader will discover the economic foundations of possible solutions and why not all market losses are legally compensable. Key features of this book include: a consideration of key legal concepts such as neighbour law, nuisance, protection of property, land use restrictions, liability, and compensation to inform a unique analysis of neighbour law in the context of conflict between airports and neighbouring landowners; practical guidance on an airport's legal liability towards neighbouring landowners; a comparative analysis of airport's liability, compensation claims, their scope and economic effects; a comparative overview of planning and environmental solutions applied in a variety of jurisdictions; a discussion of valuation methods and challenges when loss of property value is the measure of compensation. The Author's intention is to promote conscious and civil relations among market participants, as opposed to opportunistic and speculative behaviour. This book is important reading for lawyers, academics, PhD students and postgraduate students dealing with land use regulations, environmental law, compulsory purchase, eminent domain and expropriation issues, compensation for property restrictions, as well as with aviation law and legal aspects of airport operations.

Engineering Physics of High-Temperature Materials Nirmal K. Sinha, Shoma Sinha.2022-03-29
ENGINEERING PHYSICS OF HIGH-TEMPERATURE MATERIALS Discover a comprehensive exploration of high temperature materials written by leading materials scientists In Engineering Physics of High-Temperature Materials: Metals, Ice, Rocks, and Ceramics distinguished researchers and authors Nirmal K. Sinha and Shoma Sinha deliver a rigorous and wide-ranging discussion of the behavior of different materials at high temperatures. The book discusses a variety of physical phenomena, from plate tectonics and polar sea ice to ice-age and intraglacial depression and the postglacial rebound of Earth's crust, stress relaxation at high temperatures, and microstructure and crack-enhanced Elasto Delayed Elastic Viscous (EDEV) models. At a very high level, Engineering Physics of High-Temperature Materials (EPHTM) takes a multidisciplinary view of the behavior of materials at temperatures close to their melting point. The volume particularly focuses on a powerful model called the Elasto-Delayed-Elastic-Viscous (EDEV) model that can be used to study a variety of inorganic materials ranging from snow and ice, metals, including complex gas-turbine engine materials, as well as natural rocks and earth formations (tectonic processes). It demonstrates how knowledge gained in one field of study can have a strong impact on other fields. Engineering Physics of High-Temperature Materials will be of interest to a broad range of specialists, including earth scientists, volcanologists, cryospheric and interdisciplinary climate scientists, and solid-earth

geophysicists. The book demonstrates that apparently dissimilar polycrystalline materials, including metals, alloys, ice, rocks, ceramics, and glassy materials, all behave in a surprisingly similar way at high temperatures. This similarity makes the information contained in the book valuable to all manner of physical scientists. Readers will also benefit from the inclusion of: A thorough introduction to the importance of a unified model of high temperature material behavior, including high temperature deformation and the strength of materials An exploration of the nature of crystalline substances for engineering applications, including basic materials classification, solid state materials, and general physical principles Discussions of forensic physical materialogy and test techniques and test systems Examinations of creep fundamentals, including rheology and rheological terminology, and phenomenological creep failure models Perfect for materials scientists, metallurgists, and glaciologists, Engineering Physics of High-Temperature Materials: Metals, Ice, Rocks, and Ceramics will also earn a place in the libraries of specialists in the nuclear, chemical, and aerospace industries with an interest in the physics and engineering of high-temperature materials.

Writing a Translation Commentary Penélope Johnson. 2023-12-05 This essential textbook is a step-by-step guide to how to write a self-reflective translation commentary, a key requirement of most courses on translation. Starting with source text analysis, it guides students in how to set out a translation strategy and goes through the most common challenging issues encountered, thus enabling students to set out their translation priorities in an informed manner. Throughout each chapter, there are boxes summarising key concepts and suggestions of tasks and activities, as well as recommendations for further reading. The book is supplemented by online resources for students and teachers on the translation studies portal. There are nine PowerPoints based on the chapters of the book that could be used for teaching or self-study. There are also downloadable versions of sample assessment rubrics, tables for example selection, and checklists. Based on real life examples of students' work in different language combinations, drawing on the author's years of experience of teaching commentary writing, this book focuses on several types of language mediation that go beyond the written word, such as interpreting, audiovisual translation, localisation, and

transcreation. This is a vital textbook for students writing commentaries on translation and interpreting courses, a useful resource for supervisors providing students with guidance on how to write a balanced, articulate, and convincing commentary and a handy reference for professional translators and interpreters needing to explain their translation decisions to clients.

Mapping the Translator Liping Bai.2022-04-19 In *Mapping the Translator: A Study of Liang Shiqiu*, the writer studies Liang Shiqiu (1903-1987), who was not only a famous writer and important critic but also one of the most prominent translators in China in the 20th century, most notably the first Chinese to finish a translation of *The Complete Works of William Shakespeare*. Based on primary sources, this research covers issues related to the historical, cultural, cognitive and sociological dimensions of translator studies. It investigates Liang's translation poetics; the influences of possible patrons and professionals on him; the relationship between Liang's ideology, the dominant ideology and his translation; Liang's debates with Lu Xun about and beyond translation criteria, and whether there is inconsistency or possible contradiction in Liang's translation poetics. This book also analyses the similarities and differences between Liang Shiqiu and Wu Mi-two followers of Irving Babbitt-in terms of translation poetics, and further explores the reasons leading to such differences. This book is targeted at scholars and students, both undergraduate and postgraduate, in the fields of translation studies, Asian studies, Chinese studies, and literary studies.

copyright due to editing, translation, or extra material like annotations.
