J. Kielhorn, I. Mangelsdorf, United Nations Environment Programme, International Labour Organisation, World Health Organization.2003 The Environmental Health Criteria Programme (EHC) evaluates information on the relationship between exposure to environmental pollutants and human health, in order to establish guidelines for setting exposure limits. This publication focuses on the risks posed by exposures to selected nitro- and nitro-oxy-polycyclic aromatic hydrocarbons (nitroPAHs). These are derivatives of polycyclic aromatic hydrocarbons (PAHs) which contain two or more fused aromatic rings made of carbon and hydrogen atoms.

WHO Guidelines for Indoor Air Quality .2010 This book presents WHO guidelines for the protection of public health from risks due to a number of chemicals commonly present in indoor air. The substances considered in this review, i.e. benzene, carbon

monoxide, formaldehyde, naphthalene, nitrogen dioxide, polycyclic aromatic hydrocarbons (especially benzo[a]pyrene), radon, trichloroethylene and tetrachloroethylene, have indoor sources, are known in respect of their hazardousness to health and are often found indoors in concentrations of health concern. The guidelines are targeted at public health professionals involved in preventing health risks of environmental exposures, as well as specialists and authorities involved in the design and use of buildings, indoor materials and products. They provide a scientific basis for legally enforceable standards.

*Phytoremediation of Hydrocarbon-Contaminated Soils* Stephanie Fiorenza,Carroll L. Oubre,C. H. Ward.2020-12-17 Interest in phytoremediation as a solution for contaminants in groundwater and soil has exploded. The project documented in *Phytoremediation of Hydrocarbon Contaminated Soils* presents innovative technology for environmental clean up using in situ treatment. It describes the results of a field study focusing on hydrocarbon contamination, especially polynuclear aromatic hydrocarbons, in surface and near surface soils. The field demonstration used soils contaminated with aged diesel fuels. The random block design enabled the investigators to test the statistical difference in the effects of different vegetated and unvegetated treatments. They tested the degradation of diesel and polynuclear aromatic hydrocarbon components in plots containing three different vegetation treatments, two grasses and a legume, and a non-vegetated control. Part one of the monograph gives a complete and thorough account of the results of the field study. Part two covers the design and potential costs of a full-scale implementation of the demonstration system as well as the performance and potential application of the new technology. *Phytoremediation of Hydrocarbon Contaminated Soils* supplies quantitative results about the use of vegetation in soil remediation. The information given on the niches and limitations of the technologies allows for a more informed selection of

remedial solutions for environmental cleanup.

Provides guidelines for the biological monitoring of occupational exposure to four metals (aluminium, arsenic, cobalt, and nickel), three solvents (benzene, methanol, and methylene chloride), two groups of pesticides (dithiocarbamates and pyrethroids), aromatic amines, and polycyclic aromatic hydrocarbons. Guidelines for each chemical follow a common framework. The chemical is first introduced in terms of its physical and chemical properties, possible occupational and non-occupational exposures, data on toxicokinetics and toxic effects, and a comparison of currently available biological indicators of exposure. Recommended biomarkers are then discussed in terms of suggested methods of sampling and analysis, and guidelines for the interpretation of test results.

## **Mobile Source Emissions Including Polycyclic Organic**

**Species** D. Rondia, M. Cooke, R.K. Haroz. 2012-12-06 This book contains the combined papers from a NATO sponsored meeting entitled Mobile Source Emissions Including Polycyclic Organic Species. This meeting was held in Liege, Belgium, from August 30 to September 2, 1982, as an Advanced Research Workshop (ARW). Specialists from 13 countries met to discuss the impacts of fuel type and engine operation on emissions from gasoline and diesel-powered vehicles. The meeting was organized into five sessions: basic studies, biological activity, analytical methods, data bases, engineering and international research programs. The five sessions were each followed by intensive discussions on the important conclusions to be drawn from the data presented. From these session discussions, subcommittee efforts and a final group discussion on all the research results presented, a meeting summary was prepared by the editors that presents the major findings of the conference and gives detailed recommendations for future research. This summary is included at the end of the book. The summary includes highlights of data presented, areas of research needs, recommendations for standardization of test parameters and species analyzed, suggested new methodology for characterizing mobile emissions, trends in fuel use including diesel, gasoline, anti-knock additives and blending agents, operation of catalysts, control strategies, implications from both in vivo and in vitro health effects studies, and a presentation of the scope and direction of several large international programs that are major studies of mobile source performance.

Is the tap water safe to drink? Is it safe to live near power lines? Unfortunately, physicians often lack the information and training related to environmental health risks needed to answer such questions. This book discusses six competency based learning objectives for all medical school students, discusses the relevance of environmental health to specific courses and clerkships, and demonstrates how to integrate environmental health into the curriculum through published case studies, some of which are included in one of the book's three appendices. Also included is a guide on where to obtain additional information for treatment, referral, and follow-up for diseases with possible environmental and/or occupational origins.

**Polynuclear Aromatic Compounds** Lawrence B. Ebert.1988
