Measuring Media Use and Exposure Christina Peter,Teresa K. Naab,Rinaldo Kühne.2019-09-11 The precise measurement of media use and exposure to media content posits currently one of the main methodological challenges in communication research. Against this background, new communication technologies have been gaining particular importance because they change existing patterns of media use and create new types of media use. At the same time, these technologies do not only present a challenge for communication research, but they also provide new opportunities for the assessment of media use. The volume regards current developments and trends in the measurement of media use and exposure from various perspectives. Contributions deal with the refinement and advancement of classical approaches, and new methods and measures of assessing media use are introduced and evaluated. They also discuss the advantages and challenges of using online behavioral data as indicators for media exposure. Contributions tackle questions how different methods of measuring media use and exposure can be combined to gain a more accurate picture and what pitfalls can occur.

How Scientists Explain Disease Paul Thagard.2000-07-30 How do scientists develop new explanations of disease? How do those explanations become accepted as true? And how does medical diagnosis change when physicians are confronted with new scientific evidence? These are some of the questions that Paul Thagard pursues in this book that develops a new, integrative approach to the study of science. How Scientists Explain Disease challenges both traditional philosophy of science, which has viewed science as largely a matter of logic, and contemporary science studies that view science as largely a matter of power. Drawing on theories of distributed computing and artificial intelligence, Paul Thagard develops new models that make sense of scientific change as a complex system of cognitive, social, and physical interactions.

Better Answers Ardith Cole.2023-10-10 Student's writing skills are improving tremendously... Last year's fourth-graders started using the sandwich method mid-year and almost all of them scored in the highest possible category when they took the state's standardized English-language arts test just a few months later. Wells Central Schools, Wells Central is just one of numerous schools that attribute their success to Ardith Davis Cole's Better Answers process. Since 2002, her book Better Answers has offered teachers and school districts a powerful alternative to test-prep workbooks. It presents a dramatically different instructional model that helps students construct thoughtful test responses, but it also prepares them for any task requiring thorough, cogent answers to questions and prompts -- both in and out of school. Now, with students tested more frequently than ever, and with teachers increasingly concerned about incorporating substantive test-taking skills into children's learning, Ardith Cole responds with a new updated and expanded edition of Better Answers. Informed by Ardith's ongoing work in classrooms where students struggle over constructed-response tasks, the new edition makes the Better Answers sandwich even easier to implement. The book has also been significantly reorganized, as well as expanded to include two new chapters, Understanding the Prompt and What to do When. Also included is a resource-packed CD-ROM that contains everything teachers need to support their lessons and is a great tool for staff development: lesson plans for text-based and self-based responses; power point slides, charts, and other visual supports; sets of sample texts with prompts; sample student responses; assessment forms; extensive bibliography of print and online resources. The Better Answers process is easy to grasp and uses a gradual-release instructional process that begins with teacher modeling, invites increasing amounts of student participation, and eventually moves students into independent response writing. The book clearly explains each element of the process and provides helpful activities, authentic classroom vignettes, and tips on how to handle typical stumbling blocks along the way.

Computer Science Robert Sedgewick,Kevin Wayne.2016-06-17 Named a Notable Book in the 21st Annual Best of Computing list by the ACM! Robert Sedgewick and Kevin Wayne's Computer Science: An Interdisciplinary Approach is the ideal modern introduction to computer science with Java programming for both students and professionals. Taking a broad, applications-based approach, Sedgewick and Wayne teach through important examples from science, mathematics, engineering, finance, and commercial computing. The book demystifies computation, explains its intellectual underpinnings, and covers the essential elements of programming and computational problem solving in today's environments. The authors begin by introducing basic programming elements such as variables, conditionals, loops, arrays, and I/O. Next, they turn to functions, introducing key modular programming concepts, including components and reuse. They present a modern introduction to object-oriented programming, covering current programming paradigms and approaches to data abstraction. Building on this foundation, Sedgewick and Wayne widen their focus to the broader discipline of computer science. They introduce classical sorting and searching algorithms, fundamental data structures and their application, and scientific techniques for assessing an implementation's performance. Using abstract models, readers learn to answer basic questions about computation, gaining insight for practical application. Finally, the authors show how machine architecture links the theory of computing to real computers, and to the field's history and evolution. For each concept, the authors present all the information readers need to build confidence, together with examples that solve intriguing problems. Each chapter contains question-and-answer sections, self-study drills, and challenging problems that demand creative solutions. Companion web site (introcs.cs.princeton.edu/java) contains Extensive supplementary information, including suggested approaches to programming assignments, checklists, and FAQs Graphics and sound libraries Links to program code and test data Solutions to selected exercises Chapter summaries Detailed instructions for installing a Java programming environment Detailed problem sets and projects Companion 20-part series of video lectures is available at informit.com/title/9780134493831

Search Engine Society Alexander Halavais.2013-04-25 Search engines have become a key part of our everyday lives. Yet while much has been written about how to use search engines and how they can be improved, there has been comparatively little exploration of what the social and cultural effects might be. Like all technologies, search engines exist within a larger political, cultural, and economic environment. This volume aims to redress this balance and to address crucial questions such as: * How have search engines changed the way we organize our thoughts about the world, and how we work? * What are the 'search engine wars', what do they portend for the future of search, and who wins or loses? * To what extent does political control of search engines, or the political influence of search engines, affect how they are used, misused, and regulated? * Does the search engine help shape our identities and interactions with others, and what implications does this have for privacy? Informed members of the information society must understand the social contexts in which search engines have been developed, what that development says about us as a society, and the role of the search engine in the global information environment. This book provides the perfect starting point.

Surf the Internet Justine Ciovacco.2004 Introducing a whole new way to learn science! Start at the end and work backwards! You flick a light switch in your house and lights go on. But how did that happen? There are actually many steps that lead up to that final result. Many complex processes need to take place, and many components need to function properly. How does the light switch make the electricity flow? How does the electricity get into the house? How does it get into the neighborhood? Where is the electricity actually generated? Step Back Science answers these questions with detailed text, fun engaging sidebars, and great photos and graphics as it ties together elements from science, design, and engineering.

Organizations and Strategies in Astronomy Andre Heck.2012-12-06 I am most grateful to Andr' e Heck for his invitation to write a foreword to OSA Volume 4 - I will use this valued opportunity to emphasise those topics in Vol. 4 which I consider important even if other topics may be of even greater importance in the universal scale of things. At the outset let me say that I commend Vol. 4 to its readers - it contains much of very great interest for organisations and strategies in astronomy. A topic which I consider to be of very great importance at this time is Adverse Environmental Impact on Astronomy. There are two papers on this topic in OSA 4 - Cohen on Strategies for Protecting Radio Ast- nomy and Schwarz on Light Pollution Control. The growth in the extent of use, the power and spectral demand for radio transmission continues to increase virtually exponentially. The impact on the 'listening' services such as radio astronomy has been severe. Only by creativity in developing new techniques for radio noise (including legal transmissions) reduction and by participating fully in the allocation process for radio frequencies has radio astronomy developed to the powerful investigative tool it is today.

Management Science Featuring Micro-Macro Economics and Management of Information Technology W.Y. Dornyo.2020-10-09 This book is one of a series of various doctoral research project papers and has been further refined and converted into a book. The book has been deemed one of further versions of management science that are to come. These further versions focus more on information technology and its effects as agile tools for management, including software engineering, algorithms and data structures, computer architecture and electronics, systems science, artificial intelligence and robotics, quantum science, statistics, and web-internet and multimedia design and building. Managers are usually multifaceted with multiple disciplines even though they have one or two areas as majors, specialties, or experience. It is in the light of this that Management Science Featuring Micro-Macro Economics and Management of Information Technology was designed in this context to contain economics with IT as a course of study. In the future, further versions will be pure courses instead of combinations. The world has changed gear for the better due to the advanced mysteries of information technology innovations so that we could even conduct scientific laboratory experiments, medical diagnoses, and rule of law adjudications online. That means we could not forget information technology as one major tool in hand that should be a pivot on and around which all other areas in management should dwell and revolve, and this was one of the sole reasons of this book. It is therefore worthy of note for readers aspiring as systems analysts, managers, and professionals to accustom themselves to the subject areas in the book to instill understanding of numerous important terms and points in economics and IT. This will help to build further courage and understanding toward advancement in these fields. All topics indicated in the table of contents have been made reader friendly and treated to focus easy understanding. We highly acknowledge all the intellectual materials used.

Self-Regulated Learning in Technology Enhanced Learning Environments Roberto Carneiro,Paul Lefrere,Karl Steffens,Jean Underwood.2012-01-01 Self-regulated learning (SRL) subsumes key aspects of the learning process, such as cognitive strategies, metacognition and motivation, in one coherent construct. Central to this construct are the autonomy and responsibility of students to take charge of their own learning. Skills for self-regulation can be encouraged both directly and indirectly through a range of learning activities. In this book we look specifically at the ways in which technology enhanced learning environments (TELEs) have been used to support self-regulation. The book provides an overview of recent studies on SRL in TELEs in Europe - a perspective which is new and has not been articulated hitherto. It addresses conceptual and methodological questions as well as practices in technology enhanced learning. While the focus is on European studies, we are aware that much of the groundwork in the field of SRL has emanated from the United States. The book is divided into three parts: (A) Foundations of SRL in TELEs, (B) Empirical studies on SRL in TELEs and (C) SRL in TELEs: perspectives on future developments. The book presents a rich resource of information for researchers and educators at all levels who are interested in supporting the acquisition of SRL through TELEs.
