**Revoked** Allison Frankel. 2020 [The report] finds that supervision -- probation and parole -- drives high numbers of people, disproportionately those who are Black and brown, right back to jail or prison, while in large part failing to help them get needed services and resources. In states

examined in the report, people are often incarcerated for violating the rules of their supervision or for low-level crimes, and receive disproportionate punishment following proceedings that fail to adequately protect their fair trial rights.--Publisher website.

*Psychological Testing in the Service of Disability Determination* Institute of Medicine, Board on the Health of Select Populations, Committee on Psychological Testing, Including Validity Testing, for Social Security Administration Disability Determinations. 2015-06-29 The United States Social Security Administration (SSA) administers two disability programs: Social Security Disability Insurance (SSDI), for disabled individuals, and their dependent family members, who have worked and contributed to the Social Security trust funds, and Supplemental Security Income (SSSI), which is a means-tested program based on income and financial assets for adults aged 65 years or older and disabled adults and children. Both programs require that claimants have a disability and meet specific medical criteria in order to qualify for benefits. SSA establishes the presence of a medically-determined impairment in individuals with mental disorders other than intellectual disability through the use of standard diagnostic criteria, which include symptoms and signs. These impairments are established largely on reports of signs and symptoms of impairment and functional limitation. *Psychological Testing in the Service of Disability Determination* considers the use of psychological tests in evaluating disability claims submitted to the SSA. This report critically reviews selected psychological tests, including symptom validity tests, that could contribute to SSA disability determinations. The report discusses the possible uses of such tests and their contribution to disability determinations. *Psychological Testing in the Service of Disability Determination* discusses testing norms, qualifications for administration of tests, administration of tests, and reporting

results. The recommendations of this report will help SSA improve the consistency and accuracy of disability determination in certain cases.

*Validation of Experimental Electronics Selection Battery* Robert S. Andrews.1964 Accelerated use of electronic systems and equipment in the Army has generated an increasing requirement for means of selecting personnel who can successfully complete electronics training courses and satisfactorily perform in highly critical electronics positions. The present publication summarizes research accomplished in several integrated studies which culminated in development of an experimental electronics selection battery of 15 tests. The component experimental measures--three information, five reasoning ability, six noncognitive ability, one personality background--were evaluated in conjunction with the operational Army Classification Battery (ACB) for effectiveness in differentiating between potential for electronics (high complexity) MOS and electrical (low complexity) MOS. Three measures, two which were derived from a single instrument--the Personal Inventory for Electronics--emerged as the most promising predictors of success in Electronics MOS. The third measure, RME, was composed of radio, mathematics, and electronics information items from several of the tests. These measures will be included in comprehensive studies of experimental and operational predictors as part of the total classification battery and aptitude area system.

**Testing Teacher Candidates** National Research Council,Division of Behavioral and Social Sciences and Education,Board on Testing and Assessment,Center for Education,Committee on Assessment and Teacher Quality.2001-10-19 Americans have adopted a reform agenda for their schools that calls for excellence in teaching and learning. School officials across the nation are hard at work targeting instruction at high levels for all students. Gaps remain, however, between the nation's educational aspirations and student achievement. To address these gaps, policy makers have recently focused on the qualifications of teachers and the preparation of teacher candidates. This book examines the

appropriateness and technical quality of teacher licensure tests currently in use, evaluates the merits of using licensure test results to hold states and institutions of higher education accountable for the quality of teacher preparation and licensure, and suggests alternatives for developing and assessing beginning teacher competence. Teaching is a complex activity. Definitions of quality teaching have changed and will continue to change over time as society's values change. This book provides policy makers, teacher testers, and teacher educators with advice on how to use current tests to assess teacher candidates and evaluate teacher preparation, ensuring that America's youth are being taught by the most qualified candidates.

**Strengthening Forensic Science in the United States** National Research Council, Division on Engineering and Physical Sciences, Committee on Applied and Theoretical Statistics, Policy and Global Affairs, Committee on Science, Technology, and Law, Committee on Identifying the Needs of the Forensic Sciences Community. 2009-07-29 Scores of talented and dedicated people serve the forensic science community, performing vitally important work. However, they are often constrained by lack of adequate resources, sound policies, and national support. It is clear that change and advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of work, establish enforceable standards, and promote best practices with consistent application. *Strengthening Forensic Science in the United States: A Path Forward* provides a detailed plan for addressing these needs and suggests the creation of a new government entity, the National Institute of Forensic Science, to establish and enforce standards within the forensic science community. The benefits of improving and regulating the forensic science disciplines are clear: assisting law enforcement officials, enhancing homeland security, and reducing the risk of wrongful conviction and exoneration. *Strengthening Forensic Science in the United States* gives a full account of what is needed to advance the forensic science disciplines, including upgrading of systems and organizational structures, better training, widespread adoption of uniform and enforceable best practices, and mandatory certification and accreditation programs. While this book provides an essential call-to-action for congress and policy makers, it also serves as a vital tool for law enforcement agencies, criminal prosecutors and attorneys, and forensic science educators.

*Adult Literacy in OECD Countries* T. Scott Murray, Irwin S. Kirsch, Lynn Jenkins. 1998 In December 1995, the Organisation for Economic Co-Operation and Development (OECD) and Statistics Canada

jointly published the results of the first International Adult Literacy Survey (IALS). For this survey, representative samples of adults aged 16 to 65 were interviewed and tested in their homes in Canada, France, Germany, the Netherlands, Poland, Sweden, Switzerland, and the United States. This report describes how the survey was conducted in each country and presents all available evidence on the extent of bias in each country's data. Potential sources of bias, including sampling error, non-sampling error, and the cultural appropriateness and construct validity of the assessment instruments, are discussed. The chapters are; (1) Introduction (Irwin S. Kirsch and T. Scott Murray); (2) Sample Design (Nancy Darcovich); (3) Survey Response and Weighting (Nancy Darcovich); (4) Non-Response Bias (Nancy Darcovich, Marilyn Binkley, Jon Cohen, Mats Myrberg, and Stefan Persson); (5) Data Collection and Processing (Nancy Darcovich and T. Scott Murray); (6) Incentives and the Motivation To Perform Well (Stan Jones); (7) The Measurement of Adult Literacy (Irwin S. Kirsch, Ann Jungeblut, and Peter B. Mosenthal); (8) Validity Generalization of the Assessment across Countries (Don Rock); (9) An Analysis of Items with Different Parameters across Countries (Marilyn R. Binkley and Jean R. Fourteen appendixes contain supplemental information, some survey questionnaires, and additional documentation for various chapters. (Contains 94 tables, 12 figures, and 74 references.) (SLD)

**The Black-White Test Score Gap** Christopher Jencks, Meredith Phillips. 2011-01-01 The test score gap between blacks and whites--on vocabulary, reading, and math tests, as well as on tests that claim to measure scholastic aptitude and intelligence--is large enough to have far-reaching social and economic consequences. In their introduction to this book, Christopher Jencks and Meredith

Phillips argue that eliminating the disparity would dramatically reduce economic and educational inequality between blacks and whites. Indeed, they think that closing the gap would do more to promote racial equality than any other strategy now under serious discussion. The book offers a comprehensive look at the factors that contribute to the test score gap and discusses options for substantially reducing it. Although significant attempts have been made over the past three decades to shrink the test score gap, including increased funding for predominantly black schools, desegregation of southern schools, and programs to alleviate poverty, the median black American still scores below 75 percent of American whites on most standardized tests. The book brings together recent evidence on some of the most controversial and puzzling aspects of the test score debate, including the role of test bias, heredity, and family background. It also looks at how and why the gap has changed over the past generation, reviews the educational, psychological, and cultural explanations for the gap, and analyzes its educational and economic consequences. The authors demonstrate that traditional explanations account for only a small part of the black-white test score gap. They argue that this is partly because traditional explanations have put too much emphasis on racial disparities in economic resources, both in homes and in schools, and on demographic factors like family structure. They say that successful theories will put more emphasis on psychological and cultural factors, such as the way black and white parents teach their children to deal with things they do not know or understand, and the way black and white children respond to the same classroom experiences. Finally, they call for large-scale experiments to determine the effects of schools' racial mix, class size, ability grouping, and other policies. In addition to the editors, the contributors include Claude Steele, Ronald Ferguson, William G. Bowen, Philip Cook, and William Julius Wilson.

*Methods in Educational Research* Marguerite G. Lodico, Dean T. Spaulding, Katherine H. Voegtle. 2010-04-07 *Methods in Educational Research* is designed to prepare students for the real world of educational research. It focuses on scientifically-based methods, school accountability, and the professional demands of the twenty-first century, empowering researchers to take an active role in conducting research in their classrooms, districts, and the greater educational community. Like the first edition, this edition helps students, educators, and researchers develop a broad and deep understanding of research methodologies. It includes substantial new content on the impact of No Child Left Behind legislation, school reform, quantitative and qualitative methodologies, logic modeling, action research, and other areas. Special features to assist the teaching and learning processes include vignettes illustrating research tied to practice, suggested readings at the end of each chapter, and discussion questions to reinforce chapter content. Praise for the Previous Edition A new attempt to make this subject more relevant and appealing to students. Most striking is how useful this book is because it is really grounded in educational research. It is very well written and quite relevant for educational researchers or for the student hoping to become one. -PsycCRITIQUES/American Psychological Association I applaud the authors for their attempt to cover a wide range of material. The straightforward language of the book helps make the material understandable for readers. -Journal of MultiDisciplinary Evaluation *Language Teacher Supervision* Kathleen M. Bailey. 2006 This book analyzes teacher supervision in a variety of settings and is a rich resource for teachers preparing to hold supervisory positions and for practicing language teacher supervisors alike.

**The American Psychiatric Association Practice Guidelines for the Psychiatric Evaluation of Adults** American Psychiatric Association. 2015-07-29 Since the publication of the Institute of

Medicine (IOM) report Clinical Practice Guidelines We Can Trust in 2011, there has been an increasing emphasis on assuring that clinical practice guidelines are trustworthy, developed in a transparent fashion, and based on a systematic review of the available research evidence. To align with the IOM recommendations and to meet the new requirements for inclusion of a guideline in the National Guidelines Clearinghouse of the Agency for Healthcare Research and Quality (AHRQ), American Psychiatric Association (APA) has adopted a new process for practice guideline development. Under this new process APA's practice guidelines also seek to provide better clinical utility and usability. Rather than a broad overview of treatment for a disorder, new practice guidelines focus on a set of discrete clinical questions of relevance to an overarching subject area. A systematic review of evidence is conducted to address these clinical questions and involves a detailed assessment of individual studies. The quality of the overall body of evidence is also rated and is summarized in the practice guideline. With the new process, recommendations are determined by weighing potential benefits and harms of an intervention in a specific clinical context. Clear, concise, and actionable recommendation statements help clinicians to incorporate recommendations into clinical practice, with the goal of improving quality of care. The new practice guideline format is also designed to be more user friendly by dividing information into modules on specific clinical questions. Each module has a consistent organization, which will assist users in finding clinically useful and relevant information quickly and easily. This new edition of the practice guidelines on psychiatric evaluation for adults is the first set of the APA's guidelines developed under the new guideline development process. These guidelines address the following nine topics, in the context of an initial psychiatric evaluation: review of psychiatric symptoms, trauma history, and treatment history; substance use assessment; assessment of suicide risk; assessment for risk of

aggressive behaviors; assessment of cultural factors; assessment of medical health; quantitative assessment; involvement of the patient in treatment decision making; and documentation of the psychiatric evaluation. Each guideline recommends or suggests topics to include during an initial psychiatric evaluation. Findings from an expert opinion survey have also been taken into consideration in making recommendations or suggestions. In addition to reviewing the available evidence on psychiatry evaluation, each guideline also provides guidance to clinicians on implementing these recommendations to enhance patient care.
