*A Buzz in the Meadow* Dave Goulson.2015-04-28 A CONSERVATIONIST'S DEEPLY PERSONAL AND FASCINATING REFLECTION ON OWNING AND REVITALIZING A FARM IN RURAL FRANCE A Sting in the Tale, Dave Goulson's account of a lifetime studying bees, was a powerful call to arms for nature lovers everywhere. Brilliantly reviewed, it was shortlisted for the Samuel Johnson Prize for the best nonfiction book of the year, and debuted the already renowned conservationist's ability to charm and educate, and tell an absorbing story. In *A Buzz in the Meadow*, Goulson returns to tell the tale of how he bought a derelict farm in the heart of rural France. Over the course of a decade, on thirty-three acres of meadow, he created a place for his beloved bumblebees to thrive. But other creatures live there too, myriad insects of every kind, many of which Goulson had studied before in his career as a biologist. You'll learn how a deathwatch beetle finds its mate, why butterflies have spots on their wings, and see how a real scientist actually conducts his experiments. But this book is also a wake-up call, urging us to cherish and protect life in all its forms. Goulson has that rare ability to persuade you to go out into your garden or local park and observe the natural world. The undiscovered glory that is life in all its forms is there to be discovered. And if we learn to value what we have, perhaps we will find a way to keep it.

**Deep Space Flight and Communications** Claudio Maccone.2009-06-09 The majority of books dealing with prospects for interstellar flight tackle the problem of the propulsion systems that will

be needed to send a craft on an interstellar trajectory. The proposed book looks at two other, equally important aspects of such space missions, and each forms half of this two part book. Part 1 looks at the ways in which it is possible to exploit the focusing effect of the Sun as a gravitational lens for scientific missions to distances of 550 AU and beyond into interstellar space. The author explains the mechanism of the Sun as a gravitational lens, the scientific investigations which may be carried out along the way to a distance of 550 AU (and at the 550 AU sphere itself), the requirements for exiting the Solar System at the highest speed and a range of project ideas for missions entering interstellar space. Part 2 of the book deals with the problems of communicating between an interstellar spaceship and the Earth, especially at very high speeds. Here the author assesses a range of mathematical tools relating to the Karhunen-Loève Transform (KLT) for optimal telecommunications, technical topics that may one day enable humans flying around the Galaxy to keep in contact with the Earth. This part of the book opens with a summary of the author's 2003 Pešek Lecture presented at the IAC in Bremen, which introduces the concept of KLT for engineers and 'newcomers' to the subject. It is planned to include a DVD containing the full mathematical derivations of the KLT for those interested in this important mathematical tool whilst the text itself will contain the various results without outlines of the mathematical proofs. Astronautical engineers will thus be able to see the application of the results without getting bogged down in the mathematics.

**The Book of Divine Works** St. Hildegard of Bingen. 2018-10-16 Completed in 1173, The Book of Divine Works (Liber Divinorum Operum) is the culmination of the Visionary's Doctor's theological project, offered here for the first time in a complete and scholarly English translation. The first part explores the intricate physical and spiritual relationships between the cosmos and the human person, with the famous image of the universal Man standing astride the cosmic spheres. The second part examines the rewards for virtue and the punishments for vice, mapped onto a geography of purgatory, hellmouth, and the road to the heavenly city. At the end of each Hildegard writes extensive commentaries on the Prologue to John's Gospel (Part 1) and the first chapter of Genesis (Part 2)—the only premodern woman to have done so. Finally, the third part tells the history of salvation, imagined as the City of God standing next to the mountain of God's foreknowledge, with Divine Love reigning over all.

*Pocket Genius: Rocks and Minerals* DK.2016-01-19 Profiling nearly 200 types of rocks and minerals from volcanic rocks and granite to sparkling diamonds and explosive sulfur, DK's Pocket Genius: Rocks and Minerals digs deep beneath the surface, informing young readers what each rock is made of, how they are formed and what they are used for, how to be a rock collector, and how to identify rocks and minerals. Also highlighting landmarks such as Devils Tower, Giant's Causeway, and Shiprock Pinnacle, this Pocket Genius title shows how rocks and minerals play a part in the formation of each. Catalog entries include facts provided at-a-glance information, while locator icons offer immediately recognizable references to aid navigation and understanding, and fact files round off the book with fun facts such as record breakers and timelines. Each mini-encyclopedia is filled with facts on subjects ranging from animals to history, cars to dogs, and Earth to space and

combines a child-friendly layout with engaging photography and bite-size chunks of text that will encourage and inform even the most reluctant readers.

**Learned Societies, Freemasonry, Sciences and Literature in 18th-Century Hungary** Réka Lengyel, Gábor Tüskés. 2017-11-26 The present collection of primary sources, comprised of printed and manuscript materials, offers a new approach to the history of learned societies and Freemasonry in Hungary in the 18th century. Materials include academic proposals, regulations of learned societies and reading circles, letters, pamphlets as well as Masonic constitutions, rituals, orations, essays, and a sentimental novel. In addition to the Latin- and German-language documents, some Hungarian-language sources of special importance are published in English translation. The sources in the first part of the collection illustrate the growing desire and ambition among Hungarian intellectuals for establishing national literature and science, and for raising the level of general literacy among the population. Starting from the diagnosis that, compared to other European countries, Hungary was quite backward in terms of cultivating the sciences, several people emphasized the need to raise the standards of public education, while others thought that establishing learned societies or scientific academies could change the situation. The examination of the history of learned and secret societies shows that in 18th-century Hungary social culture could develop within the framework of Freemasonry. The functioning learned societies and reading circles were established at the initiative of lodge members, and a large number of the authors of the proposals were also Freemasons. The establishment of learned societies was motivated by the ideas which were also the guiding principles of the Freemasons: spreading enlightenment, promoting the well-being of the people, and supporting the sciences and the arts. The editors intended to bring to an international audience the selected materials which warrant further research and examination.

**Francisco Goya** Sarah Carr-Gomm.2011-07-01 Goya is perhaps the most approachable of painters. His art, like his life, is an open book. He concealed nothing from his contemporaries, and offered his art to them with the same frankness. The entrance to his world is not barricaded with technical difficulties. He proved that if a man has the capacity to live and multiply his experiences, to fight and work, he can produce great art without classical decorum and traditional respectability. He was born in 1746, in Fuendetodos, a small mountain village of a hundred inhabitants. As a child he worked in the fields with his two brothers and his sister until his talent for drawing put an end to his misery. At fourteen, supported by a wealthy patron, he went to Saragossa to study with a court painter and later, when he was nineteen, on to Madrid. Up to his thirty-seventh year, if we leave out of account the tapestry cartoons of unheralded decorative quality and five small pictures, Goya painted nothing of any significance, but once in control of his refractory powers, he produced masterpieces with the speed of Rubens. His court appointment was followed by a decade of incessant activity - years of painting and scandal, with intervals of bad health. Goya's etchings demonstrate a draughtsmanship of the first rank. In paint, like Velázquez, he is more or less dependent on the model, but not in the detached fashion of the expert in still-life. If a woman was ugly, he made her a despicable horror; if she was alluring, he dramatised her charm. He preferred to finish his portraits at one sitting and was a tyrant with his models. Like Velázquez, he concentrated on faces, but he drew his heads cunningly, and constructed them out of tones of transparent greys.

Monstrous forms inhabit his black-and-white world: these are his most profoundly deliberated productions. His fantastic figures, as he called them, fill us with a sense of ignoble joy, aggravate our devilish instincts and delight us with the uncharitable ecstasies of destruction. His genius attained its highest point in his etchings on the horrors of war. When placed beside the work of Goya, other pictures of war pale into sentimental studies of cruelty. He avoided the scattered action of the battlefield, and confined himself to isolated scenes of butchery. Nowhere else did he display such mastery of form and movement, such dramatic gestures and appalling effects of light and darkness. In all directions Goya renewed and innovated.

**The Geology of Germany** Martin Meschede, Laurence N. Warr.2019-02-26 This richly illustrated book presents Germany's geological evolution in the context of the Earth's dynamic history. It starts

with an introduction to Geology and explains the plate tectonic development, as well as the formation of both ancient and recent mountain belts – namely the Caledonian, Variscan and the modern-day Alps – that formed this part of Europe. A dedicated chapter discusses the origin of earthquakes in Germany, the occurrence of young volcanic rocks and the various episodes of rock deformation and metamorphism at these complex crossroads of plate tectonic history. The book highlights Germany's diverse geological history, ranging from the origin of the Earth, the formation of deep crystalline rocks, and their overlying sedimentary sequences, to its more recent "ice age" quaternary cover. The last chapter addresses the shaping of the modern landscape. Though the content is also accessible for non-geologists, it is primarily intended for geoscience students and an academic audience.

**Free, Fair, and Alive** David Bollier, Silke Helfrich.2019-09-03 The power of the commons as a free, fair system of provisioning and governance beyond capitalism, socialism, and other -isms. From co-housing and agroecology to fisheries and open-source everything, people around the world are increasingly turning to 'commoning' to emancipate themselves from a predatory market-state system. Free, Fair, and Alive presents a foundational re-thinking of the commons — the self-organized social system that humans have used for millennia to meet their needs. It offers a compelling vision of a future beyond the dead-end binary of capitalism versus socialism that has almost brought the world to its knees. Written by two leading commons activists of our time, this guide is a penetrating cultural critique, table-pounding political treatise, and practical playbook. Highly readable and full of colorful stories, coverage includes: Internal dynamics of commoning How the commons worldview opens up new possibilities for change Role of language in reorienting our perceptions and political strategies Seeing the potential of commoning everywhere. Free, Fair, and Alive provides a fresh, non-academic synthesis of contemporary commons written for a popular, activist-minded audience. It presents a compelling narrative: that we can be free and creative people, govern ourselves through fair and accountable institutions, and experience the aliveness of authentic human presence.
