Critical Care Study Guide Gerard J. Criner, Rodger E. Barnette, Gilbert E. D'Alonzo. 2010-06-27
Critical care medicine is a dynamic and exciting arena where complex pathophysiologic states require extensive knowledge and up-to-date clinical information. An extensive knowledge of basic pathophysiology, as well as awareness of the appropriate diagnostic tests and treatments that are used to optimize care in the critically ill is essential. Since our first edition 7 years ago, new information crucial to the care and understanding of the critically ill patient has rapidly accumulated. Because this knowledge base crosses many different disciplines, a comprehensive multidisciplinary approach presenting the information is essential, similar to the multidisciplinary approach that is used to care for the critically ill patient. We have strived to provide this content in an easily digestible format that uses a variety of teaching tools to facilitate understanding of the presented concepts and to enhance information retention. To meet the demand to provide comprehensive and diverse education in order to understand the pathogenesis and optimum care of a variety of critical illnesses, we have substantially revised the prior topics in the first edition with updated information. We have also markedly expanded the number of topics covered to include acute lung injury and the acute respiratory distress syndrome, an expanded discussion of the physiology and operation of mechanical ventilation, obstetrical care in the ICU, neurosurgical emergencies, acute coronary syndromes, cardiac arrhythmias, role of whole body rehabilitation in the ICU, ethical conduct of human research in the ICU, and nursing care of the ICU patient.

A Review of Documented Oral Care Practices in an Intensive Care Unit Linda S. Goss.2008 Prevention of ventilator associated pneumonia (VAP) includes routine oral care of the mechanically ventilated patient. Oral care is recognized as an essential component of patient care and nursing documentation provides evidence of this process. This study examined the frequency of oral care in ventilated and non ventilated patients. A retrospective chart review of patients admitted to an intensive care unit (ICU) between July 1, 2007 and December 31st 2007 was conducted. Data were analyzed using logistic regression to determine which variables if any were related to the likelihood of the patient receiving oral care. Frequency of oral care documentation was found to be done at an average of every 2.91 to 3.44 hours with a range of 1-8 hours suggesting inconsistencies in practice. This study also found that the nursing critical care flow sheet did not provide an opportunity for detailed documentation of oral care.

Consumer-Centered Computer-Supported Care for Healthy People H.-A. Park, P.J. Murray, C. Delaney. 2006-06 This publication, initiated by the Korean Society of Medical Informatics (KOSMI) and its Nursing Informatics Specialist Group, and the Special Interest Group in Nursing Informatics of the International Medical Informatics Association (IMIA-NI), is published for nurses and informatics experts working with informatics applications in nursing care, administration, research and education, bringing together the worlds of nursing informatics community. Korea is well known for having the highest level of Information and Communication Technology (ICT) accessibility in the world. Advances in ICT in Korea have lead Korean health care sectors to fully utilize the benefit of ICT for health care. The theme of the book, 'Consumer-Centered Computer-Supported Care for Healthy People', emphasizes the central role of the consumer and the function of information technology in health care. It reflects the major challenge in our time, which is developing and using information technology for the improvement of consumer oriented health care. I would seriously recommend that this book - in text form - should be available in all nursing libraries as a resource for study and reference in the expanding area of nursing and health care."--Paula M. Procter, Reader in Informatics and Telematics in Nursing, The University of Sheffield, United Kingdom.
