47 Easy-to-Do Classic Science Experiments Eugene F. Provenzo,Asterie Baker Provenzo.2012-07-31 Here is a highly motivating book for grade-school students that will introduce them to many of the world's most popular (and historically significant) scientific experiments. They'll learn about gravity simply by following the acrobatic antics of an ordinary coin. By trying to blow an egg out of a cup, they'll discover the principles of air pressure. Dancing soap bubbles will help them understand the effects of static electricity, and by dropping quarters into a full glass of water without causing it to overflow, they'll study the effects of surface tension. These and over 40 other experiments have been carefully selected by noted educators Eugene and Asterie Baker Provenzo to familiarize children with classic science experiments involving optics, inertia, air pressure, magnetism, sound, topology,

light, density, vibration, prisms, elasticity, gases, vacuum, perspective, geometry, centrifugal force, buoyancy, color, and much more. Some experiments, such as the optical Newton's Rings are hundreds of years old. Still others, like the straw lever test, are based on Greek experiments with leverage and the center of gravity — first carried out thousands of years ago. Easy-to-follow instructions and illustrations show youngsters how to perform each experiment, most of which are prefaced with historical background, a list of necessary materials and an explanation of key terms. Almost all experiments can be carried out with common household items (tissue paper, scissors, tapes, rubber balloons, pens, pencils, etc.) and can be worked at home or in the classroom to demonstrate specific scientific principles or to supplement a science-curriculum unit. Sources for all historical illustrations given in the text are listed at the end of the book.

The Book of Potentially Catastrophic Science Sean Connolly.2017-03-07 It's never been more

important to engage a child's scientific curiosity, and Sean Connolly knows just how to do it—with lively, hands-on, seemingly dangerous experiments that pop, ooze, crash, and teach! Now, the author of *The Book of Totally Irresponsible Science*, takes it one step further: He leads kids through the history of science, and then creates amazing yet simple experiments that demonstrate key scientific principles. Tame fire just like a Neanderthal with the Fahrenheit 451 experiment. Round up all your friends and track the spread of disease using body glitter with an experiment inspired by Edward Jenner, the vaccination pioneer who's credited with saving more lives than any other person in history. Rediscover the wheel and axle with the ancient Sumerians, and perform an astounding experiment demonstrating the theory of angular momentum. Build a simple telescope—just like Galileo's—and find the four moons he discovered orbiting Jupiter (an act that helped land him in prison). Take a less potentially catastrophic approach to electricity than Ben Franklin did with the Lightning Mouth experiment. Re-create the Hadron Collider in a microwave with marshmallows, calculator, and a ruler—it won't jeopardize Earth with a simulated Big Bang, but will demonstrate the speed of light. And it's tasty! By letting kids stand on the shoulders of Aristotle, Newton, Einstein, the Wright brothers, Marie Curie, Darwin, Watson and Crick, and more, *The Book of Potentially Catastrophic Science* is an uncommonly engaging guide to science, and the great stories of the men and women behind the science.

Make Science Fun: Experiments Jacob Strickling. 2017-11-06 *Make Science Fun 2*, intended for an older more 'serious' age group of 8-15, is designed for children to do actual science experiments (not just science 'activities') at home. Most science experiment books aren't experiment books at all. They mostly contain fun science activities, which are fun to do & help learn science - but a fun science 'activity' isn't always an experiment. A science experiment sets out to answer a question or solve a problem using a fair and controlled test. To count as a science experiment you need to take measurements, make observations and control variables. With space to write hypotheses, record results, make observations and draw graphs required, *Make Science Experiments* is a strong foundation on which to build student awareness of the importance of science in everyday lives.

SELLING POINTS - Science experiments for the kitchen, garage or workshop, bathroom and garden. - Bonus projects perfect for a science fair or school project. - Projects using only basic products that can be found in every home kitchen or bathroom. - *Make Science Fun* banishes the 'science is boring' stereotype through fun experiments that children can do alone or with friends or parents. - The author's YouTube channel.

Physics Lab in a Housewares Store Bob Friedhoffer.2013-01-29 Introduction Science does not have to be a scary thing reserved for people who wear white lab coats and work in sterile looking laboratories. Many scientists do not work in a lab. Some wear their favorite jeans, sneakers, and a T-shirt every day. Science does not have to be complicated by math. The basic concepts of science are as important as the math that is usually used to describe what is happening. Science does not have

to involve experiments that damage the Earth or aid in making bigger, more powerful guns and bombs. Environmental scientists perform experiments that help the environment. Medical researchers do work that relieves pain and prolongs life. Science can be fun. If it weren't for science, we wouldn't have TVs, arcade games, ovens, TV dinners, microwaveable popcorn, bicycles, VCRs, elevators, escalators, cars, motorcycles, sewing machines, paper, or computers. Science is something that you can do every day of your life-using objects that you find in your house, in your yard, or at a store. When I was a youngster, I always wanted to know what made things work. I liked to do experiments. There were not many books that explained scientific principles using normal, everyday objects. Later on, as an adult, I wanted to write a few books that would help students perform experiments and have fun, while learning science at home. Sometimes it's a real drag to sit and listen to a teacher explain things. It can be much more fun-and more revealing-to perform these experiments and observations yourself. This book is intended to help you learn about science by performing experiments and making observations with items that you can find in almost any housewares store or housewares department of a large department store. You do not have to buy any of the items described in this book-you can examine them to see how they work while browsing in the store. But if you decide to do this, be sure to handle the merchandise carefully. Do not break or destroy the items or their packaging. To write this book, I went to a number of housewares stores and found many items that utilize scientific principles. Some of these items are so simple that you might not realize that there is a scientific basis to them. After you read this book, you might want to take some friends through one of these stores and ask them if they know why certain things work. Scattered throughout this book you will see a safety symbol. Ask an adult to help you whenever you see this symbol. The symbol indicates that the experiment is a little bit dangerous or difficult. I'd

hate to see you get discouraged or hurt while you're learning about science in a housewares store!
