*The Golden Book of Chemistry Experiments* Robert Brent.2015-10-10 BANNED: The Golden Book of Chemistry Experiments was a children's chemistry book written in the 1960s by Robert Brent and illustrated by Harry Lazarus, showing how to set up your own home laboratory and conduct over 200 experiments. The book is controversial, as many of the experiments contained in the book are now considered too dangerous for the general public. There are apparently only 126 copies of this book in libraries worldwide. Despite this, its known as one of the best DIY chemistry books every published. The book was a source of inspiration to David Hahn, nicknamed the Radioactive Boy Scout by the media, who tried to collect a sample of every chemical element and also built a model nuclear reactor (nuclear reactions however are not covered in this book), which led to the involvement of the authorities. On the other hand, it has also been the inspiration for many children

who went on to get advanced degrees and productive chemical careers in industry or academia. *Classic Chemistry Experiments*. 2000 Chemistry is an experimental subject, and what can be more stimulating than carrying out a laboratory experiment where the results are memorable either by their visual nature or by their tying together of theory. This collection of 100 chemistry experiments has been developed with the help and support of teachers throughout the UK. Each student worksheet is accompanied by a teachers' notes sheet which gives details for teachers and technicians on apparatus and chemicals, timing, context, teaching tips, background theory and answers to any questions on the student worksheets. *Classic Chemistry Experiments* is designed as a teaching aid to help communicate the excitement and wonder of chemistry to students, and is ideal for both experienced chemistry teachers and to scientists from other disciplines who are teaching chemistry.

**Chemical Experiments General and Analytical** R. P. Williams.2017-11-14 Excerpt from Chemical

Experiments General and Analytical: For Use With Any d104-Book of Chemistry, or Without a d104-Book In preparing the experiments the author has endeavored, first, to select such as are most instructive and best illustrate the subject without being too elaborate; second, to arrange them in an order calculated to lead up by the most natural and easiest steps to a knowledge of the science; third, to make the subject fascinating by giving just enough information and suggestion to interest the experimenter, and to make him work for the knowledge to be gained. Finally, the author has aimed to make the book simple enough for the dull and slow pupil, and - by the introduction of supplementary and original work elaborate enough for the most acute. Great care has been taken to give minute and accurate directions for performing the experiments. Terms at the end of experiments are for pupils to study outside the laboratory, and are often repeated. They may also be discussed in the laboratory. Metal analysis has received a somewhat unique treatment. Each metal of a group is first taken separately, and the analytical reactions are given. This method shows the pupil at once why a given reagent is added, and what its effect is. The product is given when the substance is in solution as well as when it is precipitated. The group is next treated in the same way. This method clarifies the subject greatly in the pupil's mind, and is believed to be a valuable departure in teaching analysis. *CHEMISTRY EXPERIMENTS* James Signorelli.2014-09-19 Gifted and talented students and any student interested in pursuing a science major in college needs a rigorous program to prepare them while they are still in high school. This book utilizes a format where the application of several disciplines and science, math, and language arts principles and are mandated. Each lab concludes with either an essay or a detailed analysis of what happened and why it happened. This format is based on the expectations of joining a university program or becoming an industrial science professional. the ideal student lab report would be written in a lab research notebook, and then the essay or final analysis is done on a word processor to allow for repeat editing and corrections. the research notebook has all graph pages, a title section, and a place for the students and their assistants to sign and witness that exercise. the basic mechanics of the lab report and title, purpose, procedure, diagrams, data table, math and calculations, observations, and graphs and are handwritten into the book. the conclusion is done on a word processor (MS Word), which allows the instructor to guide the student in writing and editing a complete essay using the MLA format. When the final copy is completed, the essay is printed and inserted into the lab notebook for grading. At the end of the term, the student has all their labs in one place for future reference. These lab notebooks can be obtained for as little as \$ 3.00 per book. This is money well-spent. In our district, the Board of Education buys the books for each student. the BOE sees these books as expendable but necessary materials for all science and engineering instruction.

Guided Inquiry Experiments for General Chemistry Nancy K. Kerner, Ram S. Lamba. 2007-10-19 The use of the laboratory is a valuable tool in developing a deeper understanding of key chemical concepts from the experimental process. This lab manual encourages scientific thinking, enabling readers to conduct investigations in chemistry. It shows how to think about the processes they are investigating rather than simply performing a laboratory experiment to the specifications set by the manual. Each experiment begins with a problem scenario and ends with questions requiring feedback on the problem.

Molecular Visions (Organic, Inorganic, Organometallic) Molecular Model Kit #1 by Darling Models to accompany Organic Chemistry Darling Models. 2000-04-07 Molecular models are as vital a tool for the study of chemistry as calculators are for the study of mathematics. Molecular Visions models may be assembled in infinite combinations enabling the user to construct not only familiar configurations but also undiscovered possibilities. Models are intended to inspire the imagination, stimulate thought, and assist the visualization process. They present the user with a solid form of an abstract object that can otherwise only be visualized by the chemist. While chemistry textbooks use letters and graphics to describe molecules, molecular models make them real. MOLECULAR VISIONS Organic Kit #1 is in a green plastic box, 9x4x2

*More of Janice VanCleave's Wild, Wacky, and Weird Chemistry Experiments* Janice VanCleave. 2016-12-15 In a series of fun and involving hands-on chemistry experiments, kids observe the effect of molecular motion, try to inflate a balloon inside of a bottle, demonstrate the cleaning of water by capillary action, discover how detergent causes other molecules to move, and make water

appear to boil with only the touch of a finger. They will also demonstrate how salt makes it harder for water to freeze, learn how to grow salt crystals and how to produce an elastic material, and observe liquids that will and will not mix together. Featuring color illustrations and safe, simple step-by-step instructions, Janice VanCleave again shows just how much fun science can be.

**Radioanalytical Chemistry Experiments** Moses Attrep, Bernd Kahn. 2007-11-24 This Manual accompanies the Textbook, teaching radioanalytical chemistry to seniors and graduate students. The manual can be used in conjunction with the textbook to teach a 3-hour lecture course and a 6-hour laboratory. The experiments address a range of practical aspects in the radiochemistry laboratory: use of laboratory and radiation detection equipment, performing specific analyses for radio-iodine, radio-strontium, uranium, and plutonium.

*Laboratory Experiments in General Chemistry* Herman Schlundt. 2015-06-25 Excerpt from *Laboratory Experiments in General Chemistry* The experiments outlined in this manual are designed primarily for college students who have not had a course in chemistry in a preparatory school. The exercises represent the laboratory work of a comparatively brief introductory course in General Chemistry. The experiments are to be conducted under the guidance of an instructor, and are to be supplemented by class-room demonstrations in connection with recitations from a text-book in General Chemistry for college students, or by illustrated lectures and text-book assignments. Frequently the experiments do not furnish sufficient information to enable the student to answer some of the questions and make the explanations that are to appear in his notebook. The necessary information can generally be obtained from the text-book, and it is my plan to have the student use

the text-book and laboratory outline as companion volumes in the laboratory. To facilitate the students progress in this connection page references to two widely used texts have been inserted. My experience goes to show that the student will thus make very efficient use of his time, that he will give care and thought to his work, and that the laboratory work can be successfully made the central feature of instruction in the course. In preparing the experiments, the substances chosen for study have purposely been limited to avoid scattering the students efforts. Intensive, rather than extensive, study has been the underlying idea in selecting the exercises. Extended experiments on the metallic elements have not been included, as I feel that this work should be undertaken in Analytical Chemistry, and be allotted some of the time so largely used for laboratory practice in following a scheme of separations. I fully realize the value of practice in the identification of unknown substances, and this feature of laboratory work has been duly emphasized, and, it is hoped, in a manner which preserves its educational value. Emphasis has also been placed upon the general reactions of acids, bases, and salts, the processes of oxidation and reduction, and chemical changes prominent in everyday life.
