**The Power of Science** Domenico Rossetti di Valdalbero.2010 This book highlights the interaction between science and politics and between research in economics and European Union policy-making. It focuses on the use of Quantitative tools, Top-down and Bottom-up models in up-stream European decision-making process through five EU policy case studies: energy taxation, climate change, energy efficiency, renewable energy, and internalisation of external costs. The author reveals how the European Commission grounds part of its legitimacy on the «objectivity of the figures» and on its «technical charisma». Faced by strong stakeholders, an elected European Parliament and a Council representing the national interests, the Commission defends the credibility of its policy initiatives (e.g. energy and environment targets, new market mechanisms) by scientific reports. Through an in-depth analysis of the preparatory legislation (Commission White Papers, Communications, Directive Proposals, Staff Working Documents, Impact Assessments), the author

explains how the European Commission justifies economically and supports politically its initiatives. This book offers a new way of understanding the EU decision-making process with special reference to the energy and environment fields.

From Order to Chaos Leo P Kadanoff.1993-10-13 This book is a compilation of the review papers, expositions and some of the technical works of Leo Kadanoff, a theoretical physicist. The objective is to put together a group of not-too-technical writing in which he discusses some issues in condensed

matter physics, hydrodynamics, applied mathematics and national policy. The volume is divided into four sections. The first section contains review papers on hydrodynamics, condensed matter physics and field theory. Next is a selection of papers on scaling and universality, particularly as applied to phase changes. A change of pace is provided by a series of papers on the critical analysis of simulation models of urban economic and social development. The book concludes with a series of recent papers on turbulence and chaos. Each major section has an introduction designed to tie the work together and to provide perspective on the subject matter. Contents: Fundamental Issues in Hydrodynamics, Condensed Matter and Field Theory Scaling and Phase Transitions Simulations, Urban Studies and Social Systems Turbulence and Chaos Readership: Condensed matter physicists, applied mathematicians and computer scientists. keywords: Order; Chaos; Critical; Statistical Mechanics; Phase Transition; Scaling; Universality; Dynamics; Turbulence; Renormalization “World Scientific has made available a collection of Leo's reviews, essays columns and commentaries which is a feast in several senses: the strategy and tactics of science, the science itself, the history of several important developments in science, and as a bonus a beautifully illustrated collection of essays on computational science. The average reader may find this, the final section of the book, most interesting, but for me the account of his discovery of scaling, for which, inexplicably, he did not receive the Nobel prize, is most intriguing. Leo's combination of verve, frankness and insight makes this a very good read.” P W Anderson Princeton Univ. “Publication of this volume will be very useful, especially for young readers. The papers disseminated over many journals acquire a new quality by being collected together. Readers not only can see a result in its final form, but also can trace its evolution.” J Fluid Mechanics “The book is an invaluable source of information and inspiration on a variety of important problems in modern physics.” EMS

**Critical Perspectives on Mongo Beti** Stephen H. Arnold.1998 Mongo Beti is considered one of the most prolific and widely read authors from Cameroon, and his writings have called world attention to political corruption in his native country. These essays cover the three distinct periods of his greatest activities as a writer - 1953-1958, 1974 and 1991.

La revue des deux mondes .1865

The Bill of Lading Frank Stevens.2017-12-14 The carriage of goods by sea starts off with a contract of carriage, an essentially simple and straightforward contract between two parties, the shipper and the carrier. Very often, however, a bill of lading is issued and a third party appears on the scene: the holder of the bill of lading. The holder was not involved in the making of the contract of carriage, but does have rights, and possibly obligations, against the carrier at destination. The question then is how the third-party holder of the bill acquires those rights and obligations. Analysing the different theories that have been proposed to explain the position of the third party holder, this book makes a distinction between contractual theories and non-contractual theories to explain the holder's position. Contractual theories build on the initial contract of carriage and apply contract law mechanisms while non-contractual theories construe the position of the third-party holder independently. Following the analysis and appraisal of the different theories, this book makes the case that the position of the third-party holder of the bill of lading is not obvious or self-evident; and submits that a statutory approach to the position of the holder of the bill of lading has advantages and would be preferable.

Cooler Heads Shall Prevail Patrick J. Monahan, C.D. Howe Institute.1995 This study addresses the legal aspects of Quebec's intention to secede from Canada. The paper looks at the legal framework governing secession in both Canadian and international law; describes the manner in which events

might unfold during the period immediately following a positive referendum result; takes issues with the claim that Quebec secession is a matter for Quebecers alone to decide; and analyzes the two ways in which Quebec could secede, by amendment to the Canadian Constitution or by a unilateral declaration of independence by the Quebec Government.

**Sisters of the Brush** Tamar Garb.1994-01-01 Although the women of the Union were often quite conservative politically, socially, and stylistically, says Garb, they believed that women had a special gift that would enhance France's cultural reputation and maintain the uplifting moral-cultural position that seemed in jeopardy at the turn of the century. Focusing on the developments that made the prominence of the organisation possible, Garb discusses the growth of the women's movement, educational reforms, institutional changes in the art world, and critical debates and contemporary scientific thought.

**Struggle, Defeat Or Rebirth** Thierry Dubost.1997-01-01 To Eugene O'Neill, the links between man and his surroundings were of prime importance. His characters struggled with existential problems, and how they related to them reveals much about O'Neill's own humanity. For the most part, the characters defeat their problems and in doing so are reborn in some manner. This work examines the 49 plays that O'Neill completed, focusing on his attempt to find an inner truth in his characters. Part One explores the family, showing how a person is trapped by heredity, space, time and communal hierarchy. Part Two deals with the individual and society, showing how societal conventions confined the characters. In Part Three, personal freedom is the centerpiece, showing how the characters develop a specific approach to life that leads to a coherent vision of the characters' relationships with the world around them.
