Nursing Research Using Case Studies Mary De Chesnay, PhD, RN, PMHCNS-BC, FAAN.2016-07-18 Once considered to be a lesser pedagogical method, the case study is indeed a powerful, in-depth tool with which to examine evidence-based practice around patient care, family dynamics, professional roles, and organizational systems. Here is a unique “how-to” guide to conducting research using case studies. Focusing on leading and newer methodologies, the text describes the philosophical basis and state of the art for using this qualitative method. The peer-reviewed designs (including interviews, physiological measurements, psychological tests, and analysis of patients’ diaries and journals) are accompanied by an in-depth research plan, a discussion of appropriate methods, and ethical considerations. The text provides clear directives—bolstered by nursing examples--on how to solve practical problems a researcher may encounter. Examples from international scholars who have published research using case studies are included along with coaching designed to support the new researcher in making decisions and facing challenges. Also included are book and chapter objectives, competencies, review questions,

critical thinking exercises, and web links to additional information. The text is part of a series of eight concise volumes addressing a variety of methods for conducting qualitative research. Conceived and edited by a noted expert in qualitative research, the book is designed for both novice and practicing researchers seeking to develop or expand their competency, health institution research divisions, in-service educators and students, and graduate nursing educators and students. Key Features: Explains clearly and concisely how to conduct research using case studies Reviews the philosophical basis for using case studies Focuses on solving practical problems related to conducting research Offers rich nursing exemplars and coaching from international health/mental health contributors Includes objectives, critical thinking exercises, competencies, resources, and review material for each book.

Doing a Research Project in Nursing and Midwifery Carroll Siu, Huguette Comerasamy. 2013-02-01
Due to ethical issues surrounding data collection in the field of healthcare, students are no longer able to undertake their own empirical research. This book is written for nursing and midwifery students completing a research project based on reviewing published literature and using secondary data. It de-mystifies the concept of literature review methodology and supports students writing up their dissertation, thesis or work-based learning project. The book provides step-by-step guidance on: - Identifying a research problem - Qualitative and quantitative research design - Literature searching - Ethical considerations - Analysis of secondary data - Writing your dissertation Through its discussion of non-empirical methods, the book also prepares students for future empirical research by providing examples of best practice in healthcare research. The book is essential reading for undergraduates and postgraduates who want to succeed in their nursing or midwifery research project.

How to Prepare a Dissertation Proposal David R. Krathwohl, Nick L. Smith. 2005-06-06 This step-by-step guide begins by identifying and defining the basics of a dissertation proposal. With careful consideration, they explore proposal functions and parts, show how to build your study's chain of reasoning, and carefully review alternate study designs. Chapters are devoted to qualitative studies (sectioned into case studies, philosophical, and historical investigations); quantitative studies (sectioned into experimental, causal modeling, and meta-analysis studies), and mixed-method studies (sectioned into: sample survey, evaluation, development, and demonstration and action projects). Three extensively annotated proposals of former students provide examples of the guidance offered and illustrate common types of studies.

Qualitative Research Proposals and Reports Patricia L. Munhall, Ronald J. Chenail. 2008 The Fourth Edition of this popular, instructive guide provides the reader with essential information on formatting and reporting qualitative research abstracts and reports. The guide includes internet resources and appendices with examples of outlines of different methods.

Nursing and Midwifery Research Dean Whitehead, Geri LoBiondo-Wood, Judith Haber. 2012-10-31 The new edition upholds the premise that knowledge about research process and design is mandatory in today's health care arena, and that all nurses and midwives need to understand research findings and their implication for changing practice. It is completely revised with many new chapters. The text has been restructured into three sections. Section 1 Research Awareness sets the scene for the importance of nursing and midwifery research and provides an overview of research theory and practice as processes. Chapters on searching for and reviewing the literature provide detailed advice for undergraduates and facilitate access to research articles online. One of the new chapters discusses ethical issues in Australia and New Zealand. Section 2 Appreciation and

Application provides a detailed discussion of qualitative, quantitative and mixed methods research approaches with many useful examples from the clinical area. Section 3 Conducting primary research is new and is designed to accommodate both undergraduate and postgraduate students in their research effort. Writing research proposals may be a requirement for undergraduates in their research program and postgraduates will find the information useful for undertaking a higher degree or applying for university or external funding. This final Section is also useful as a guide on disseminating and publishing conducted research findings. Combined Australian and New Zealand editorship ensures greater trans-Tasman coverage, awareness and relevance. Contributions from international luminaries are balanced by a heightened focus on research conducted within Australia and New Zealand. New edition conscientiously recognises midwifery research as related to but independent from nursing. The research process-driven approach is directed towards 'consumers' of research, and the comprehensive coverage extends from undergraduate through to a postgraduate level of knowledge. Expanded pedagogy includes Key Terms and Learning Outcomes at the beginning of each chapter; Icons throughout that direct readers to web-based material; Evidence-based Tips, Research in Brief boxes and Points to Ponder for constant reinforcement that links evidence to practice. Integrated Tutorial Triggers with suggested answers provided and Multiple Choice Questions enable students to assess their understanding of key points. Evolve Website provides True/False questions and access to journal articles cited in the text, with additional reflective questions. end of chapters; the tests can be undertaken individually, or within groups, to assess the student's understanding of the concepts and skills being learnt. Research Methods for Nursing and Healthcare takes the fear out of research methods for all nursing and healthcare professionals. Excellent introductory text that brings interest to research methods for student nurses. Dr Aimee Aubeeluck, Deputy Director: Graduate Entry Nursing, School of Nursing, Midwifery and Physiotherapy University of Nottingham I think this is one of the most readable books on research I have read. Not the most scholarly, but that was not the intention. It is certainly the most user friendly book that will make the whole, often scary, subject of research less threatening. Paula Crick, Principal Lecturer, Faculty of Health, Staffordshire University I do think this is one of the most engaging texts aimed at nursing that I have read in a while... This does seem much more exciting and more importantly. 'real world' Lucy Land, Senior Academic, Centre for Health and Social Care Research Faculty of Health Birmingham City University Useful resource for our students dissertation which can be a literature review or a research proposalMelanie Brooke-Read, Department of Health & Social Studies, University of Bedfordshire Excellent text book which actually takes away the 'fear' of research within healthcare Angela Cobbold, Institute of Health & Social Care, Anglia Ruskin University The text is very comprehensive and I found chapter 7 on action research particularly useful in supporting a student I was supervising. I also like the self assessment exercises which I intend to incorporate in my teaching strategy. Ms. Mulcahy, School of Nursing and Midwifery, University College Cork.
