Evolutionary Gerontology and Geriatrics Giacinto Libertini, Graziamaria Corbi, Valeria Conti, Olga Shubernetskaya, Nicola Ferrara. 2021-05-25 This book provides concrete scientific basis that we can conceive the possibility of modifying or even completely canceling aging process, despite the fact that aging is commonly regarded as the result of the overall effects of many uncontrollable degenerative phenomena. The authors illustrate in detail the mechanisms by which cells and the whole organism age. Actions by which it is possible, or will be possible within a limited time, to operate for modifying aging are also debated. The discussion is conducted within the frame and the concepts of evolutionary medicine, which is also indispensable for distinguishing between the manifestations of aging and: (i) diseases that worsen with age, and (ii) acceleration of normal aging rates, caused by unhealthy lifestyle habits and other avoidable factors. The book also discusses the impact of aging on overall mortality and the strange situation that, according to official statistics, aging does not exist as cause of death. This book is a turning point between a gerontology and geriatrics conceived as the study and vain treatment of an incurable condition and one in which these disciplines examine the how and why of a physiological phenomenon that can be modified up to a possible total control. This means transforming the medical prevention and treatment of physiological aging from the greatest failure to the greatest success of medicine.

Learning Geriatric Medicine Regina Roller-Wirnsberger, Katrin Singler, Maria Cristina Polidori. 2018-03-20 This textbook presents hands-on training material for medical students. The style reflects the need for practice-based teaching with a modern edge in daily clinical routine; accordingly, it also employs online material and pocket cards. Each chapter begins with specific learning objectives, which are cross-referenced with the European curriculum for undergraduate medical education released by the European Union of Medical Specialists (UEMS) together with the European Union Geriatric Medicine Society (EUGMS), as well as the minimum geriatric competences for medical students established by the American Geriatrics Society (AGS). World-renowned European experts in practicing and teaching the interdisciplinary field of Geriatrics contributed to this work, with the aim of offering the new generation of health professionals a global perspective on one of the greatest public health challenges of our time: the management of the steadily increasing number of older, multimorbid, and vulnerable persons. The major strength of this book – published under the auspices of the EUGMS – is its pragmatic, goal-oriented approach, which makes it suitable for bedside learning and patient-centered medicine; further, all of the chapters are firmly based on the pillars of the ageing process in all of its biological aspects, helping readers understand the pathophysiology of and rationale behind interventions for the main geriatric syndromes and disorders.

Perioperative Care of the Elderly Gabriella Bettelli. 2017-11-16 This innovative, comprehensive book covers the key elements of perioperative management of older patients. The book's chapter structure coincides with the clinical path patients tread during their treatment, from preoperative evaluation to post-hospital care. Epidemiological aspects and aging processes are illustrated, providing keys to understanding the quick expansion of geriatric surgery and defining the clinical profile of older surgical patients in a cybernetic perspective. Preoperative evaluation and preparation for surgery, including medication reconciliation and pre-habilitation, are developed in the light of supporting decision-making about surgery in an evidence-based and patient-focused way. Intra- and postoperative management are discussed, aiming to tailor anesthetic, surgical and nursing approaches to specific patients' needs, in order to prevent both general and age-related complications. This volume also addresses issues relevant to geriatric surgery, from different organizational models to clinical risk management and systems engineering applied to hospital organization.

Aging and Health Anatoli I. Yashin, S. Michal Jazwinski. 2015 Aging is a major risk factor for chronic diseases, which in turn can provide information about the aging of a biological system. This publication serves as an introduction to systems biology and its application to biological aging. Key pathways and processes that impinge on aging are reviewed, and how they contribute to health and disease during aging is discussed. The evolution of this situation is analyzed, and the consequences for the study of genetic effects on aging are presented. Epigenetic programming of aging, as a continuation of development, creates an interface between the genome and the environment. New research into the gut microbiome describes how this interface may operate in practice with marked consequences for a variety of disorders. This analysis is bolstered by a view of the aging organism as a whole, with conclusions about the mechanisms underlying resilience of the organism to change, and is expanded with a discussion of circadian rhythms in aging. Finally, the book presents an outlook for the development of interventions to delay or to reverse the features of aging. The publication is recommended to students, researchers as well as professionals dealing with public health and public policy related to an aging society.

The Kingdom of Infinite Space Raymond Tallis. 2014-06-05 From the act of blushing and the amount of manganese in our tears (tears of pain contain more than tears of distress) to the curiousness of a kiss, *The Kingdom of Infinite Space* explores the astonishing range of activities that go on inside our heads, most of which are entirely beyond our control. After escorting his readers on a fantastic voyage through every chamber of the head and brain, Raymond Tallis demonstrates that not only does consciousness not reside between our ears, but that our heads are infinitely cleverer than we are.

Enemies of Hope R. Tallis. 2016-04-30 Over the last few years, Raymond Tallis has published widely acclaimed critiques of influential trends in contemporary thought: for example, Not Saussure - described as 'one of the most brilliant and effective of all rebuttals of post-Saussurean theory' - In Defence of Realism and The Explicit Animal, which demonstrated the baselessness of contemporary accounts of consciousness. *Enemies of Hope* takes the story further, identifying the themes common to anti-humanist twentieth-century thought and challenging the cult of pessimism that pervades our age. Tallis teases out the many strands of the comfortable, self-congratulatory cynicism of modernist and postmodernist cultural critics, exposing their self-contradictions and their wilful blindness to the distinctive mystery of human nature. The 'pathologisers of culture' and 'the marginalisers of consciousness' are shown to be the enemies of hope - the hope of progress based upon the rational, conscious endeavours of humankind. Perceptive, passionate and often controversial, Raymond Tallis's latest debunking of *Kulturkritik* explores a host of ethical and philosophical issues central to contemporary thought, raising questions we cannot afford to ignore. After reading *Enemies of Hope*, those minded to misrepresent mankind in ways that are almost routine amongst humanist intellectuals may be inclined to think twice. By clearing away the hysterical anti-humanism of the twentieth century *Enemies of Hope* frees us to start thinking constructively about the way forward for humanity in the twenty-first.

Geriatric Medicine for Students John Charles Brocklehurst, Thomas Hanley. 1981

Emergency General Surgery in Geriatrics Rifat Latifi, Fausto Catena, Federico Coccolini. 2021-03-29 There is a growing need for a book on emergency general surgery in the elderly, as adults age 65 and older are the fastest growing segment of the population worldwide, and their number is expected to double to 89 million between now and 2050. Based on these changing demographics, it is expected that there will be a concurrent rise in the demand for a variety of surgical services, including vascular surgery (with a projected growth of 31%) and general surgery (with a projected growth of 18%), as well as in all sub-disciplines of surgery (thoracic, cardiac, oncology, hepatobiliary, transplant, plastic colorectal, orthopedic, gynecologic, urology and neurosurgery). In addition, older surgical patients often require a different level of care than younger patients during the preoperative, intraoperative and postoperative phases. Many of our geriatric population have multiple chronic illnesses beyond the one for which surgery is required, and therefore are prone to developing postoperative complications, functional decline, loss of independence, and other undesirable outcomes. In response, this book offers surgeons, geriatrists and nurses state-of-the-art surgical approaches and essential information on the complex perioperative care of the elderly.

The Role of Family Physicians in Older People Care Jacopo Demurtas, Nicola Veronese. 2021-12-30 This book provides family doctors with a wealth of evidence-based indications and tips regarding geriatric medicine and approaches for the management of older patients, to be applied in daily practice. After discussing old and new features of healthy ageing and the approaches required in Family Medicine Consultation, the text introduces key elements of geriatric medicine such as frailty, sarcopenia, and the comprehensive geriatric assessment (CGA), before describing a range of characteristics unique to older patients in different contexts, with a dedicated section on Palliative Care. The role of polypharmacy and the importance of quaternary prevention and deprescribing are also addressed. Finally, the book emphasizes both the importance of a humanistic approach in caring and the approach of research and meta-research in geriatrics. Though many texts explore the role of primary care professionals in geriatric medicine, the role of family doctors in older people care has not yet been clearly addressed, despite the growing burden of ageing, which has been dubbed the "silver tsunami." Family physicians care for individuals in the context of their family, community, and culture, respecting the autonomy of their patients. In negotiating management plans with their patients, family doctors integrate physical, psychological, social, cultural and existential factors, utilizing the knowledge and trust engendered by repeated visits. They do so by promoting health, preventing disease, providing cures, care, or palliation and promoting patient empowerment and self-management. This will likely become all the more important, since we are witnessing a global demographic shift and family doctors will be responsible for and involved in caring for a growing population of older patients. This book is intended for family medicine trainees and professionals, but can also be a useful tool for geriatricians, helping them to better understand some features of primary care and to more fruitfully interact with family doctors.

Critical Perspectives on Racial and Ethnic Differences in Health in Late Life National Research Council, Division of Behavioral and Social Sciences and Education, Committee on Population, Panel on Race, Ethnicity, and Health in Later Life. 2004-10-16 In their later years, Americans of different racial and ethnic backgrounds are not in equally good-or equally poor-health. There is wide variation, but on average older Whites are healthier than older Blacks and tend to outlive them. But Whites tend to be in poorer health than Hispanics and Asian Americans. This volume documents the differentials and considers possible explanations. Selection processes play a role: selective migration, for instance, or selective survival to advanced ages. Health differentials originate early in life, possibly even before birth, and are affected by events and experiences throughout the life course. Differences in socioeconomic status, risk behavior, social relations, and health care all play a role. Separate chapters consider the contribution of such factors and the biopsychosocial mechanisms that link them to health. This volume provides the empirical evidence for the research agenda provided in the separate report of the Panel on Race, Ethnicity, and Health in Later Life.

Prosthetic Treatment for Edentulous Patients - E-Book George A. Zarb, John Hobkirk, Steven Eckert, Rhonda Jacob. 2013-11-21 Covering the functional and esthetic needs of edentulous patients, *Prosthetic Treatment for Edentulous Patients: Complete Dentures and Implant-Supported Prostheses*, 13th Edition helps you provide complete dentures, with and without dental implant support. It addresses both the behavioral and clinical aspects of diagnosis and treatment and covers treatment modalities including osseointegration, overdentures, implant-supported fixed prosthesis, and the current and future directions of implant prosthodontics. New to this edition are full-color photographs and coverage of immediately loaded complete dental prostheses. From lead editor and respected educator George Zarb, *Prosthetic Treatment for Edentulous Patients* provides an atlas of clinical procedures and emphasizes the importance of evidence-based treatment. Short, easy-to-read chapters cover the essentials of care for both short- and long-term patients, stressing the importance of evidence-based treatment. Expanded coverage of implant prosthodontics addresses the clinical protocols for implant-retained and implant-supported prosthodontic management. Specific chapters address the three surfaces of the complete denture: (1) an impression or intaglio surface, (2) a polished surface, and (3) an occlusal surface, the integration of which is crucial to creating a stable, functional, and esthetic result. Chapter on health and nutrition examines a number of systemic conditions (vesciculoerosive conditions, systemic lupus erythematosus, burning mouth syndrome, salivary dysfunction, Sjögren's syndrome, hyper/hyposalivation, diabetes) that affect the oral cavity and specifically influence the prognosis for wearing complete dentures or for accepting osseointegrated prostheses. Chapter on the time-dependent changes which occur in the oral cavity focuses on both time-related direct (ulcer/cheek biting, irritation hyperplasia, denture stomatitis, flabby ridge and pendulous maxillary tuberosities, hyperkeratosis and oral cancer, residual ridge reduction) and indirect (atrophy of masticatory muscles, nutritional status and masticatory function, control of sequelae) changes in the oral environment, and provides strategies to minimize the risk of such changes. Chapter on the techniques used to prolong the life of complete dentures focuses on the two techniques used to extend the life of dentures: relining and rebasing, also touching on denture duplication. Well-respected editors and contributors are the leaders in their field, lending credibility and experience to each topic.
