**Natural Dyes** Dominique Cardon.2007 This book describes some 300 plants and 30 animals (marine mollusks and scale insects) that are used as sources for natural dyes. Botanical or zoological details are given for each source and the chemical structures is shown for each dye. Dyes employed by different civilisations, identified by dye analyses, are illustrated and relevant historical recipes and detailed descriptions of dyeing processes by traditional dyers are quoted and explained in the light of modern science. Other current uses of natural colorants, e.g. in medicine and for food and cosmetics, and replacement of synthetic by natural dyes are also noted.

**Shibori Designs & Techniques** Mandy Southan.2008-12-10 Mandy Southan takes the art of Shibori, in which fabric is bound, clamped or stitched before dyeing, and goes beyond the traditional blue and white to create fabrics in a fabulous array of colours, patterns and textures. Clear step by step photographs and instructions demonstrate how to use acid dyes and cold water reactive dyes in a variety of creative ways. Mandy then demonstrates shibori techniques such as binding, hand painting, capping, stitching, folding and clamping, pole winding and pole wrapping can be used to create truly wonderful dyed fabrics.

**Japanese Ikat Weaving** Jun Tomita,Noriko Tomita.2024-01-15 First Published in 1982, Japanese Ikat Weaving offers a professional approach to the subject, presented with great clarity and precision. Japanese Ikat weaving, also known as Kasuri, is the technique by which lengths of yarn are tied and dyed before weaving. Patterns created with this technique are unique and its popularity is increasing among weavers, craftsmen and textile designers in all parts of the world. The authors give an account of the history of Kasuri and describes the regional technical differences of its use in Japan. They deal in detail with the actual techniques of various types of weft and warp Kasuri; each sequence is explained clearly and concisely, using many diagrams. Kasuri and indigo are inseparable in Japanese Ikat weaving and the final section is therefore devoted to a discussion of indigo dyeing. This is an interesting read for students of textile design, fashion design and Japanese culture.

**The Surface Designer's Handbook** Holly Brackmann.2013-03-10 Beginning with studio practices and safety rules, this information-packed handbook is appropriate for both newcomers and experienced dyers but assumes that readers have a serious interest in textile design. An overview of dyeing starts with fibers and fabrics and discusses all aspects of the dyes favored by textile studios--fiber reactive, acid, vat, and disperse--before explaining discharging, screen printing, monoprinting, stamping, stenciling, resist dyeing, devore, and painting. Would-be fabric artists are advised along the way to identify a personal approach to dyeing--free spirit? rule-follower?--and color photographs of work by today's top fiber artists elucidate prevailing styles. Recipes and techniques are accompanied by step-by-step instructions with photographs, and a concealed spiral binding allows the book to lie flat. Ten appendices include a worksheet for recording chemicals, procedures, and costs for all projects; a guide to washing fabric; descriptions of stock solutions, thickeners, and steaming; a metric conversion table; and a guide to water temperatures.

The Dyer's Garden Rita Buchanan.1995 An explanation of the plants to grow for fabric dyes, how to care for them, and how to make dyes.

The Art and Craft of Natural Dyeing J. N. Liles.1990 For several thousand years, all dyes were of animal, vegetable, or mineral origin, and many ancient civilizations possessed excellent dye technologies. The first synthetic dye was produced in 1856, and the use of traditional dyes declined rapidly thereafter. By 1915 few non-synthetics were used by industry or craftspeople. The craft revivals of the 1920s explored traditional methods of natural dyeing to some extent, particularly with wool, although the great eighteenth- and nineteenth-century dye manuals, which recorded the older processes, remained largely forgotten. In *The Art and Craft of Natural Dyeing*, J.N. Liles consolidates the lore of the older dyers with his own first-hand experience to produce both a history of natural dyes and a practical manual for using pre-synthetic era processes on all the natural fibers--cotton, linen, silk, and wool. A general section on dyeing and mordanting and a glossary introduce the beginner to dye technology. In subsequent chapters, Liles summarizes the traditional dye methods available for each major color group. Scores of recipes provide detailed instructions on how to collect ingredients--flowers, weeds, insects, wood, minerals--prepare the dyevat, troubleshoot, and achieve specific shades--Publisher's description.

The Dyer's Handbook Dominique Cardon.2016-08-31 Persian blue, pomegranate flower, spiny lobster, wine soup, pale flesh, dove breast, golden wax, grass green, green sand, rotten olive, modest plum, agate, rich French gray, gunpowder of the English.....just some of the colour names of old fabric to fire the imagination. *Memoirs on Dyeing* concerns a unique manuscript from the eighteenth century; a dyers memoirs from Languedoc, containing recipes for dyes with corresponding colour samples. It is an exceptional document, hugely rare and of great significance not only to textile historians but dyers and colourists today, as thanks to the information in the manuscript the colours can be reproduced exactly, with the same ingredients, or reproduced using modern techniques by matching the colour samples. To the English translation of the text, together with facsimile pages reproduced in colour from the original manuscript, are added essays meant to situate it in its historical, economic and technological contexts. For those historians who have long been fascinated by the change in scale and the amount of innovation that occurred in woollen cloth production in Europe during the 17th and 18th centuries, the *Memoirs on Dyeing* bring first-hand insight into the daily preoccupations and tasks of a key actor in the success story of the Languedocian broadcloth production specially devised for export to the Levant. Even non-specialists may be interested in understanding the clever management and technical organisation that made it possible for the author to produce, dye, finish, pack and export up to 1,375 pieces of superfine broadcloth per year, representing nearly 51 km of cloth.

Shibori Nicola Gouldsmith.2018-05-08 Learn the Japanese art of shibori, including tie-dyeing, folded, rolled, and sewn techniques, using indigo dye. Then make one of the 25 projects using the fabric you have created. Shibori is the name for a range of dyeing techniques that have been practiced in Japan for centuries. Using just plain white cloth and indigo dye, you can create a huge range of patterns that will each be unique. Full photographic step-by-step instructions are given for preparing the vat and plain dyeing, so you can master these steps before you move on to the different types of shibori. Each chapter then starts with a photographic step-by-step explanation of a different shibori technique. The first chapter covers kanoko and kumo (tie-dyeing with and without stones). Next there is shibori itajime (folding the fabric and clamping it between pieces of wood), then arashi (wrapping fabric around tubes), and nui (sewing and gathering the fabric with thread). After each technique has been explained, there are simple projects to make that show off the patterns you have created at their best. A sewing techniques section completes the book, with all the basic stitches and skills you will need to make the projects.

**The Complete book on Natural Dyes & Pigments** NIIR Board of Consultants & Engineers.2005-10-04 Natural dyes are dyes or colorants derived from plants, invertebrates, or minerals. The majority of natural dyes are vegetable dyes from plant sources. Dyeing is the process of imparting colors to a textile material. Different classes of dyes are used for different types of fiber and at different stages of the textile production process, from loose fibers through yarn and cloth to completed garments. There are technologies that manufacture the pigments for plastics, rubber and cosmetics. Therefore; dyes and pigments have a vast area of applications and have a huge demand in industry. Contrary to popular opinion, natural dyes are often neither safer nor more ecologically sound than synthetic dyes. They are less permanent, more difficult to apply, wash out more easily, and often involve the use of highly toxic mordant. Of course, the colour possibilities are far more limited; the color of any natural dye may be easily copied by mixing synthetic dyes, but many other colors are not easily obtained with natural dyes. However, some mordant are not very toxic, and the idea of natural dyestuffs is aesthetically pleasing. Applying natural dyes in your fabric production using enzymes will reduce your production cost and improve control. There are various kind of natural dyes; quinonoid dyes, cyanine dyes, azo dyes, biflavyon dyes, omochromes, anthraquinone, coprosma gesus etc. The use of natural dyes in cloth making can be seen as a necessary luxury to trigger off a change in habits. Dyes which stand out for their beauty and ecological attributes would never be employed on just any material but on noble fabrics such as wool, silk, linen or cotton, made to last more than one season. Market value will benefit from consumer preferences for environmentally friendly products, which will support consumption of high performance dyes and organic pigments. This book basically deals with the use of carotenoids as food colours , bianthraquinones and related compounds, intermediate degradation products of biflavonyls, dyestuffs containing nuclear sulphonic and carboxylic acid groups, quinonoid dyes, cyanine dyes, optical whitening agents, natural dyes for food, stability of natural colourants in foods effect of additives, pyrimidine pigments, the total synthesis of the polyene pigments, red pigment from geniposidic acid and amino compound, effect of acid and amine on the formation of red pigment from geniposidic acid, effect of the substituted position of amino group and chain length of amino compound etc. Due to pollution problems in synthetic dyes and pigments industry, the whole world is shifting towards the manufacturing of natural dyes and pigments. The present book contains techniques of producing different natural dyes and pigments, which has huge demand in domestic as well as in foreign market. It is hoped that entrepreneurs, technocrats, existing units, institutional libraries will find this book very useful.
