Portal Hypertension in the 21st Century R.J. Groszmann, J. Bosch. 2011-06-27 Portal hypertension is the most important complication of a great variety of both acute and chronic liver diseases. Nevertheless, hepatic cirrhosis is the most frequent cause of portal hypertension. Gastrointestinal bleeding due to rupture of oesophageal varices is, without doubt, the most severe complication of portal hypertension. At present, great advances are being made in the pathophysiology and in the development of new therapeutic tools for controlling and preventing this severe clinical event. This book contains the papers presented and discussed during the Symposium on 'Portal Hypertension in the 21st Century', held in Montréal, Canada, in April 2004, and sponsored by Axcan Pharma Inc. and NicOx S.A. There are eight sections covering basic mechanisms, new drugs, prevention and current treatment of variceal bleeding, prevention of recurrent bleeding and hepatic hemodynamic monitoring. An international faculty of authors have contributed chapters at an outstanding scientific level which will be vital reading for scientists and clinicians alike.

Nucleic Acid Amplification Technologies Helen H. Lee, Stephen A. Morse, Ørjan Olsvik. 1997-07-15 Providing current information and guidance on the uses of various nucleic acid amplification technologies for clinical laboratory diagnosis, this book goes beyond the Polymerase Chain Reaction to explore a broader range of important alternative DNA/RNA amplification methods including the Ligase Chain Reaction, Q[β] Replicase Assays and TMA. There are many examples of specific applications of these technologies, discussions of yet unresolved issues and demonstrations of the relevance of these technologies to medical research and disease diagnostics. Individual chapters cover uses of these methods in clinical situations such as detection of food pathogens, viral infections, STDs, Mycobacteria drug resistance mutations, and heritable diseases. Automation, diagnostic test evaluation, and the synthesis of artificial DNA are also discussed. This book is designed for all biomedical scientists interested in the application of molecular biology to clinical diagnosis.

What is a Disaster? Enrico Louis Quarantelli. 2005 What is a Disaster? Addresses the most basic question in the field: that of defining the phenomenon of study. For theoretical advancement, it is important that researchers begin to develop a consensus about the meaning of disasters and related phenomena. With the rise in international terrorism, one must clarify whether these events are disasters and if so, what kind of disasters. Similarly, in addition to natural disasters, do we include riots, explosions, nuclear power plant accidents, dam collapses, and land subsidence under the same conceptual umbrella? What practical and theoretical differences does it make if the same label is used or not used for such different situations? What is a Disaster? Brings together twelve social scientists representing eight disciplines and seven countries to share their definition and vision of disasters. In the process, a wide range of views are expressed and issues raised regarding the relationship of academic versus practical definitions, the impact of grouping types of disasters in different ways, and the epistemologies on which theoretical growth should rest. The forum provided involves the presentation of each author's views, followed by a discussant's critique, and closed with a response from the author. The editor's close the volume with discussions of the theoretical framework of disaster research and an agenda for disaster research in the twenty-first

century.

Recent Developments in Gastroenterology Cyrus Holt.2020-09-22 The human gastrointestinal system can be affected by infections, inflammation and cancer. The most common disease of the gastrointestinal (GI) tract is gastroenteritis. Pathogens such as bacteria can induce gastroenteritis due to inflammation of the stomach and small intestine. The use of antibiotics reduces the microbiome diversity of the GI tract, which further aggravates the inflammatory response. Ileitis and colitis are two inflammatory conditions of the ileum and large intestine respectively. Appendicitis is the inflammation of the appendix, which can be potentially fatal if left untreated. Gastrointestinal cancer can also occur at different areas of the GI tract, such as esophageal cancer, colorectal cancer, tongue cancer, mouth cancer, stomach cancer, etc. The field of medicine concerned with the treatment and management of such disorders is known as gastroenterology. Various diagnostic and therapeutic procedures are inherent to the field of gastroenterology, such as endoscopic retrograde cholangiopancreatography, colonoscopy, endoscopy, liver biopsy, endoscopic ultrasound, etc. This book is a compilation of chapters that discuss the most vital concepts and emerging trends in the field of gastroenterology. It aims to shed light on some of the unexplored aspects of gastroenterology and the recent researches in this field. This book, with its detailed analyses and data, will prove immensely beneficial to professionals and students involved in this area at various levels.

Computers in Critical Care and Pulmonary Medicine Peter M. Osswald.2012-12-06 The anesthetist-computer interface tends to be a problem for the utilization of computer systems for anesthesia. Ergonomic interface design with an emphasis on the coherency of the interface's static and dynamic structure may improve this situation. To investigate this proposition we developed an Anesthesia Information System (AIS) with a touch-sensitive monitor as the hardware-user interface. Basic data input and system control techniques were defined and implemented. Record keeping is integrated into the user interface. Ventilator control from the same interface is an additional feature for laboratory simulations. The system is being evaluated using a technique that simulates live operations. Controversial Issues in the Management of Head and Neck Cancer: A Swiss Multidisciplinary and Multi-Institutional Patterns of Care Study Olgun Elicin,Marco Siano,Christian Simon.2020-02-26 The heterogeneity in the practice of diagnosis and treatment of head and neck squamous cell carcinoma (HNSCC) is known and expected to be inversely correlated with the level of evidence on a given topic. Literature on various aspects of management of HNSCC were previously published, but were usually restricted within narrow foci. Due to the lack of a similar comprehensive work published so far, the Head and Neck Cancer Working Group of Swiss Group for Clinical Cancer Research (SAKK) decided to perform a survey covering the whole spectrum of controversial topics concerning the diagnosis and the treatment of HNSCC among its member institutions. This survey was designed to discuss current diagnostic and treatment strategies for HNSCC of all localizations, and to find out probable differences and level of consensus between the participating academic institutions by means of a questionnaire-based pattern of care study. The items in the survey was generated with a scored voting system by inclusion of all involved centers, and divided into four sections, each of them not exceeding twenty

questions: head and neck surgery, radiation oncology, medical oncology and biomarkers. Surely, the topics and questions were intentionally chosen from controversial areas. Nonetheless, the lack of major consensus in most queried areas provide an insight to head and neck oncologist in terms of the scope of heterogeneity in their practice. Although none of the participated centers being plainly wrong, it is still disturbing to see, that a patient may be treated with quite discrepant diagnostic and treatment concepts even in a relatively small country adhering to up to date evidence based medicine. We believe that this work will serve the head and neck oncologists to be aware of their discrepancies and to stimulate discussion toward standardization of practice and prioritize topics of future clinical research.

Guide to Brain-Computer Music Interfacing Eduardo Reck Miranda,Julien Castet.2014-10-03 This book presents a world-class collection of Brain-Computer Music Interfacing (BCMI) tools. The text focuses on how these tools enable the extraction of meaningful control information from brain signals, and discusses how to design effective generative music techniques that respond to this information. Features: reviews important techniques for hands-free interaction with computers, including event-related potentials with P300 waves; explores questions of semiotic brain-computer interfacing (BCI), and the use of machine learning to dig into relationships among music and emotions; offers tutorials on signal extraction, brain electric fields, passive BCI, and applications for genetic algorithms, along with historical surveys; describes how BCMI research advocates the importance of better scientific understanding of the brain for its potential impact on musical creativity; presents broad coverage of this emerging, interdisciplinary area, from hard-core EEG analysis to practical musical applications.

Patient Blood Management Hans Gombotz,Kai Zacharowski,Donat R. Spahn.2015-11-10 Patient Blood Management (PBM) is an innovative clinical

concept that aims to reduce the need for allogenic blood transfusions, cut health-care costs, and avert or correct the risk factors related to blood transfusion, thus minimizing the rate of side effects and complications. This comprehensive hands-on volume offers a three-point approach for the implementation of PBM to improve patient outcome, focusing on how to prevent or treat anemia, reduce blood loss, and increase anemia tolerance. The book also goes beyond preoperative PBM, with detailed accounts of coagulation disorder management and the administration of coagulation products and platelet concentrates. Special Features: Presents a clear three-pillar strategy for the application of PBM: diagnosis and treatment of anemia, reduction of peri-interventional blood loss, and optimization of the tolerance to anemia in the everyday clinical setting Covers issues such as PBM during surgery, requirements for modern transfusion medicine, ordering blood products, the role of pre-anesthesia clinics, benchmarking processes, and potential implications of PBM in the public health sector Overview of research in PBM including landmark studies and current clinical trials Boxes in each chapter highlighting key information, core statements, and summaries A multidisciplinary and international team of contributors experienced in PBM Patient Blood Management is a guide for clinicians and residents whose patients are at risk for anemia, coagulation disorders, or severe blood loss. Anesthesiologists, surgeons, and specialists involved in the use of blood and blood products can use the book for quick reference or to learn more about a leading-edge concept for optimizing patient safety and improving outcome.

Electrocardiography in Clinical Practice Te-Chuan Chou, Timothy K. Ambulatory Assessment Jochen Fahrenberg, Michael Myrtek. 1996 This is the first book to appear on the topic of Ambulatory Assessment, a new approach to behavioral and psycho-physiological assessment. The ambulatory assessment approach is based on naturalistic observations and measurements made during everyday life, and has high ecological validity. This also means that ambulatory assessment techniques are ideally suited for practical application in a wide range of fields. Individual differences in behavior and physiology, as well as behavior disorders, can be investigated in real-life situations, where the relevant behavior can be studied much more effectively than in the artificial environment of the laboratory. In this book, an international group of researchers provide a comprehensive overview of ambulatory assessment. The most recently developed methodologies are examined. Their use is then illustrated with numerous examples of monitoring and assessment, both in the workplace and with patients, and including the pertinent hard- and software components. The essential objectives of ambulatory assessment, which are covered in this volume include: Recording of relevant data in natural settings -- Real-time measurement of behavioral and physiological changes -- Interactive real-time assessment by automatically prompting the subject to respond to questions or instructions -- Real-time assessment and feedback by reporting physiological changes to subjects -- Concurrent assessment of psychological and physiological changes (events, episodes) -- Correlation and contingency (symptom-context) analysis across systemic levels as suggested in triple-response models (multimodal assessment) -- Ecological validity of results and suitability for direct applications. It will be of specific interest for those interested in psychology research and its practical applications (especially differential, clinical, and applied psychology), for psychophysicists, for ergonomics/human factors specialists, and for

The Radiological Accident in Yanango International Atomic Energy Agency. 2000 In February 1999 a serious radiological accident occurred in Yanango, Peru, when a welder picked up an ¹⁹²Ir industrial radiography source and put it in his pocket for several hours. This action resulted in his receiving a high radiation dose that necessitated the amputation of one leg. His wife and children were also exposed, but to a much less extent. The purpose of this report is to provide an account of the circumstances of the accident and its medical aspects.

Clinical Ethics: A Practical Approach to Ethical Decisions in Clinical Medicine, Ninth Edition Albert R. Jonsen, Mark Siegler, William J. Winslade. 2021-12-17 A Doody's Core Title for 2023! The go-to textbook on the increasingly important and rapidly evolving topic of medical ethics. Ethical issues are embedded in every clinical encounter between patients and clinicians. In order to practice excellent clinical care, clinicians must understand ethical issues such as informed consent, decisional capacity, surrogate decision making, truth telling, confidentiality, privacy, the distinction between research and clinical care, and end-of-life care. This popular, clinically-oriented guide provides crystal-clear case-based coverage of the ethical situations encountered in everyday medical practice. Clinical Ethics introduces the proven Four Box Method—a much-needed pattern for collecting, sorting, and ordering the facts of a clinical ethical problem. This easy-to-apply system is based on simple questions about medical indications, patient preferences, quality of life, and contextual features that explain clinical ethics and help clinicians formulate a sound diagnosis and treatment strategy. In each chapter, the authors discuss case examples and provide analysis, comments, and specific recommendations. The book is divided into the four topics that constitute the essential ethical structure of every clinical encounter: Medical Indications, Preferences of Patients, Quality of Life, Contextual Features.

Treatment of Hydrocephalus Computer Tomography R. Wüllenweber, H. Wenker, M. Brock, M. Klinger. 2011-11-24 More than 40 years ago British and German neurosurgeons met in Berlin and Breslau to exchange their experiences, to strengthen their friendly bonds, and to enjoy the attractions of both cities and their surroundings. In 1960 a joint meeting of the Dutch and German societies took place in Rotterdam by invitation of the Nederlandse Vereniging van Neurochirurgen. All who attended this meeting thankfully remember the great hospitality during these unforgettable days. In 1970, by courtesy of the Society of British Neurological Surgeons, German neurosurgeons had the pleasure to become acquainted with the great tradition of British sciences at one of the most famous places during the meeting in Cambridge. These impressions were deepened by visits to other famous sources of British scientific tradition during the European Congress in Oxford in 1975. The critical distance sometimes necessary towards our own discipline is implicit in the major themes of this meeting. Complications following shunting procedures for hydrocephalus have been discussed on the basis of the results of a cooperative study of some German neurosurgical departments. The second main topic was problems and diagnostic errors in computer tomography. The papers presented contain critical considerations about the findings obtained by this method, as well as on its possibilities and limitations. German neurosurgeons felt deeply indebted to their British and Dutch colleagues and wanted to return their kindness at this joint meeting in Berlin. We hope that all participants will retain pleasant memories of the days in this city.

Geriatrische Notfallversorgung Georg Pinter, Rudolf Likar, Walter Schippinger, Herbert Janig, Olivia Kada, Karl Cernic. 2013-09-13 Aufgrund der demographischen und ökonomischen Entwicklung erlangt die Behandlung geriatrischer Patienten steigende Bedeutung. Am Beispiel der Zentralen Notfallaufnahme am Klinikum Klagenfurt wird ein Modell für eine spezifische geriatrische Notfallversorgung präsentiert, die hochbetagten multimorbiden Patienten gerecht wird. Das Buch spannt den Bogen von der hausärztlichen Akut- über die intrahospitale Notfallversorgung bis zur Pflegeheimmedizin. Im medizinischen Bereich werden Schnittstellen zwischen eindimensionaler und geriatrischer Sicht beleuchtet. Weitere erfolgreiche Projekte aus D, A und CH, in denen durch organisatorische Veränderungen eine massive Auswirkung auf Patientenströme aus Pflegeheimen gezeigt wurde, vervollständigen das Werk. Es richtet sich an Führungskräfte mit gesundheitsökonomischer Ausrichtung im Gesundheitswesen, an Pflegedienstleitungen, Mediziner (Geriatrer, Notfallmediziner und Hausärzte) und Studierende der Gesundheitsökonomie/-management, Pflegewissenschaft und Public Health.

A National Trauma Care System National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Board on the Health of Select Populations, Board on Health Sciences Policy, Committee on Military Trauma Care's Learning Health System and Its Translation to the Civilian Sector.2016-10-12 Advances in trauma care have accelerated over the past decade, spurred by the significant burden of injury from the wars in Afghanistan and Iraq. Between 2005 and 2013, the case fatality rate for United States service members injured in Afghanistan decreased by nearly 50 percent, despite an increase in the severity of injury among U.S. troops during the same period of time. But as the war in Afghanistan ends, knowledge and advances in trauma care developed by the Department of Defense (DoD) over the past decade from experiences in Afghanistan and Iraq may be lost. This would have implications for the quality of trauma care both within the DoD and in the civilian setting, where adoption of military advances in trauma care has become increasingly common and necessary to improve the response to multiple civilian casualty events. Intentional steps to codify and harvest the lessons learned within the military's trauma system are needed to ensure a ready military medical force for future combat and to prevent death from survivable injuries in both military and civilian systems. This will require partnership across military and civilian sectors and a sustained commitment from trauma system leaders at all levels to assure that the necessary knowledge and tools are not lost. A National Trauma Care System defines the components of a learning health system necessary to enable continued improvement in trauma care in both the civilian and the military sectors. This report provides recommendations to ensure that lessons learned over the past decade from the military's experiences in Afghanistan and Iraq are sustained and built upon for future combat operations and translated into the U.S. civilian system.

Ventilatory Failure J.J. Marini, C. Roussos.2012-12-06 This book reviews the most recent developments in the patho- physiology and therapy of ventilatory failure. It contains contributions by twenty-five internationally recognized authorities on respiratory muscle function and investigators actively contributing to our knowledge of the cause, diagnosis and therapy of ventilatory failure. Of particular interest are the descriptions of new modalities of partial and complete ventilatory assistance as well as new knowledge regarding ventilatory control and fatigue during stressful

breathing. The reader will find here a state-of-the-art re- view of the latest research and practical applications in this most critical area of intensive care medicine.

Imaging of Orbital and Visual Pathway Pathology Wibke S. Müller-Forell.2006-01-14 Deals with imaging of pathology of the visual system. This book is divided into two parts, general and special. 55th Anniversary of the German Society for Anaesthesiology and Intensive Care Jürgen Schüttler.2012-08-16 This book presents to all those who are interested in the history of Anaesthesiology historical details and information on the development of anaesthesiology in Germany and the remarkable growth of our Society. At the founding session of the German Society of Anaesthesia in Munich on 10 April 1953 42 persons had signed the founding documents. Today about 12,000 anaesthetists are members of the German Society of Anaesthesiology and Intensive Care Medicine, making the DGAI the biggest national society within ESA. Well known are the pioneering contributions of German scientists and surgeons to the development of general, regional and local anaesthesia during the 19th and the beginning of the 20th centuries. But less known outside Germany are the reasons for the delayed evolution of anaesthesiology as a specialty of its own in German medicine, far later than in the UK, Scandinavia or the USA. In this book you will find answers to this question and detailed information on the successful evolution of anaesthesiology especially at the Faculties of Medicine at German universities.

Biochemical Thermodynamics Robert A. Alberty.2006-03-31 Navigate the complexities of biochemical thermodynamics with Mathematica(r) Chemical reactions are studied under the constraints of constant temperature and constant pressure; biochemical reactions are studied under the additional constraints of pH and, perhaps, pMg or free concentrations of other metal ions. As more intensive variables are specified, more thermodynamic properties of a system are defined, and the equations that represent thermodynamic properties as a function of independent variables become more complicated. This sequel to Robert Alberty's popular Thermodynamics of Biochemical Reactions describes how researchers will find Mathematica(r) a simple and elegant tool, which makes it possible to perform complex calculations that would previously have been impractical. Biochemical Thermodynamics: Applications of Mathematica(r) provides a comprehensive and rigorous treatment of biochemical thermodynamics using Mathematica(r) to practically resolve thermodynamic issues. Topics covered include: * Thermodynamics of the dissociation of weak acids * Apparent equilibrium constants * Biochemical reactions at specified temperatures and various pHs * Uses of matrices in biochemical thermodynamics * Oxidoreductase, transferase, hydrolase, and lyase reactions * Reactions at 298.15K * Thermodynamics of the binding of ligands by proteins * Calorimetry of biochemical reactions Because Mathematica(r) allows the intermingling of text and calculations, this book has been written in Mathematica(r) and includes a CD-ROM containing the entire book along with macros that help scientists and engineers solve their particular problems.

Mountain Emergency Medicine Hermann Brugger, Ken Zafren, Luigi Festi, Peter Paal, Giacomo Strapazzon.2021-03-15T00:00:00+01:00 Mountain emergency medicine has seen exponential development due to the ever increasing number of people who hike or trek as well as practice extreme sports. Emergency physicians and nurses need to be equipped with the necessary training to be able to manage "on the field" accidents and sicknesses as well as their own physical security. Theoretical knowledge is generally of high level but practical expertise is dangerously lacking in many operators. Furthermore, treatment modalities on the field have not been completely codified and are not supported by internationally-accepted guidelines. This book is the first to offer a complete and thorough approach to this field of Emergency Medicine based on the latest research findings.
