Adaptive Strategies for Water Heritage Carola Hein.2019-10-18 This Open Access book, building on research initiated by scholars from the Leiden-Delft-Erasmus Centre for Global Heritage and Development (CHGD) and ICOMOS Netherlands, presents multidisciplinary research that connects water to heritage. Through twenty-one chapters it explores landscapes, cities, engineering structures and buildings from around the world. It describes how people have actively shaped the course, form and function of water for human settlement and the development of civilizations, establishing socio-economic structures, policies and cultures; a rich world of narratives, laws and practices; and an extensive network of infrastructure, buildings and urban form. The book is organized in five thematic sections that link practices of the past to the design of the present and visions of the future: part I discusses drinking water management; part II addresses water use in agriculture; part III explores water management for land reclamation and defense; part IV examines river and coastal planning; and part V focuses on port cities and waterfront regeneration. Today, the many complex systems of the past are necessarily the basis for new systems that both preserve the past and manage water today: policy makers and designers can work together to recognize and build on the traditional knowledge and skills that old structure embody. This book argues that there is a need for a common agenda and an integrated policy that addresses the preservation, transformation and adaptive reuse of historic water-related structures. Throughout, it imagines how such efforts will help us develop sustainable futures for cities, landscapes and bodies of water.

Mapping Empires: Colonial Cartographies of Land and Sea Alexander James Kent, Soetkin Vervust, Imre Josef Demhardt, Nick Millea.2019-08-26 This book comprises 17 chapters derived from new research papers presented at the 7th International Symposium of the ICA Commission on the History of Cartography, held in Oxford from 13 to 15 September 2018 and jointly organized by the ICA Commission on Topographic Mapping and the Bodleian Libraries, University of Oxford. The overall conference theme was 'Mapping Empires: Colonial Cartographies of Land and Sea'. The book presents a breadth of original research undertaken by internationally recognized authors in the field of historical cartography and offers a significant contribution to the development of this growing field and to many interdisciplinary aspects of geography, history and the geographic information sciences. It is intended for researchers, teachers, postgraduate students, map librarians and archivists.

History of Cartography Elri Liebenberg, Imre Josef Demhardt.2012-01-05 This volume comprises the proceedings of the 2010 International Symposium of the ICA Commission on the History of Cartography. The nineteen papers reflect the research interests of the Commission which span the period from the Enlightenment to the evolution of Geographical Information Science. Apart from studies on general cartography, the volume, which reflects some co-operation with the ICA Commission on Maps and Society and the United States Geological Survey (USGS), contains regional studies on cartographic endeavours in Northern America, Brazil, and Southern Africa. The ICA Commission on Maps and Society participated as its field of study often overlaps with that of the ICA Commission on the History of Cartography. The USGS which is the official USA mapping organisation, was invited to emphasise that the ICA Commission on the History of Cartography is not only interested in historical maps, but also has as mandate the research and document the history of Geographical Information Science. Water & Heritage Willem Willems,Henk Van Schaik.2017-01-15 Water is vital for life, and its availability has been a concern for mankind throughout the ages. Its presence has always been ascertained in a variety of ways and the development of human society everywhere is connected with various forms of water management. Man also needed to manage water to find protection from its dangers and the need for that is increasing. In the coming decades, the impact of climate change is expected to intensify floods and droughts, affect groundwater resources, raise sea levels, increase pollution and enhance the frequency and magnitude of disasters. Societies around the world are challenged to adapt to these threats to ensure water security, economic prosperity and environmental and cultural sustainability. This book deals with the heritage of water management and the use that was made of water, as well as the impact of water management on heritage. An example of the former may be an ancient irrigation system in the Filipines or in the Middle East that still functions today, while the latter may reflect the importance of maintaining groundwater levels for the preservation of organic remains on archaeological sites or of wooden piles underneath standing buildings. In either case the papers in this book reflect the dynamic nature of water, and hence the equally dynamic relation between water management and heritage. This publication follows up on a Heritage and Water conference in Amsterdam, the first of its kind. Its main purpose is to credibly present the importance and value of heritage and historical experience for water and sustainable development, and vice versa, present the importance of water management for the protection of heritage. It presents evolving insights and concepts about Water and about Heritage from a variety of disciplines, policy and public perspectives illustrated with cases studies and aims to connect decision makers with experts such as engineers, archaeologists, historians, geographers, ecologist and landscape architects

Driving Europe Frank Schipper.2008 Today we can hardly imagine life in Europe without roads and the automobiles that move people and goods around. In fact, the vast majority of movement in Europe takes place on the road. Travelers use the car to explore parts of the continent on their holidays, and goods travel large distances to reach consumers. Indeed, the twentieth century has deservedly been characterized as the century of the car. The situation looked very different around 1900. People crossing national borders by car encountered multiple hurdles on their way. Technically, they imported their vehicle into a neighboring country and had to pay astronomical import duties. Often they needed to pass a driving test in each country they visited. Early on, automobile and touring clubs sought to make life easier for traveling motorists. International negotiations tackled the problems arising from differing regulations. The resulting volume describes everything from the standardized traffic signs that saved human lives on the road to the Europe bus taking tourists from Stockholm to Rome in the 1950s. *Driving Europe* offers a highly original portrait of a Europe built on roads in the course of the twentieth century.

Conflicts and Crises Daniel Schultz.2021-05-19 The book reviews the life of James K. McGuire, the youngest mayor of Syracuse, New York, his role as lobbyist for the Asphalt Trust and his contributions as an activist in the fight for Irish freedom. The book explores the issues of domestic political reforms, trusts, political corruption and international intrigue. McGuire began his career as a populist reformer but became tainted by his abuse of power which led to two indictments as mayor and an investigation by the federal government during World War I involving his role as a propagandist for the German Imperial government. He was at one time a major player in Democratic party politics at the state and national level having connections to such national figures as Woodrow Wilson, William Jennings Bryan and Tammany Boss Charles Murphy. He was a ranking member in the cause of Irish freedom familiar with prominent nationalists as John Devoy, Daniel Cohalan, Eamon De Valera and Harry Boland. McGuire's story, now more than a century old, has a familiar ring to contemporary American politics.

Search for New Guinea's Boundaries Paul W. Van der Veur.2012-12-06 The paucity of published material on the borders of New Guinea and the international significance of the Irian boundary led me to bring together the information I had gathered over the past few years. Ideally, a book of this kind should cover the subject in its total historical and geographical context. The aim of this work is more modest: it intends merely to throw some light on the birth and development of New Guinea's boundaries. With this purpose in mind, after an introductory chapter attention is given to the historical events leading up to the partition of New Guinea among three European powers. In subsequent chapters the development of the boundaries between the various parts of the island is discussed. It is realized that this approach may tend to convey the impression that each particular border is in some way unique. This, however, is not intended and it is hoped that the reader will recognize some of the common underlying themes and problems which are given attention in the introductory and concluding chapters. It was intended originally to present in a brief appendix those documents which define the borders. It soon appeared desirable to include also the unpublished records of more recent border conferences and relevant correspondence leading up to the actual treaties, exchange of notes, Orders in Council, or (as the case might be) lack of action.

Hidden Geographies Marko Krevs.2021-10-21 This book defines and discusses the term "hidden geographies" in two ways: systematically and by presenting a variety of examples of the research fields and topics concerning hidden geographies, with the aim of stimulating further basic and applied research in this area. While the term is quite rarely used in the scientific literature (more often as a figure of speech than to illustrate or problematize its deeper meaning), we argue that hidden geographies are everywhere and many of them have significant impacts on (other) natural and social phenomena and processes, subsequently triggering changes, for example in landscape, economy, culture, health or quality of life. The introductory section of the book conceptualises hidden geographies and discusses cognitive geography, symbolization of space, and the hidden geographies in mystical literature. Case studies of hidden environmental geographies address soils,

air pollution, coastal pollution and the allocation of an astronomical tourism site. Revealing hidden historical and sacred places is illustrated through examples of the visualisation of the subterranean mining landscape, the analysis of the historical road network and trade, border stones and historical spatial boundaries, and the monastic Carthusian space. Hidden urban geographies are discussed in terms of the urban development of an entire city, presenting the role of geography in rescuing architecture, revealing illegal urbanisation, and the quality of habitation in Roma neighbourhoods. Case studies of hidden population geographies shed light on the ageing of rural populations and the impact of spatial-demographic disparities on fertility variations. Discussions of hidden social and economic geographies problematize recent social changes and conflicts in a country, present the implementation of the fourth industrial revolution and borders as hidden obstacles in the organisation of public transport. Hidden geographies are explicitly linked to perceptions and explanations in case studies that address local responses to perceived marginalisation in a city, the solo women travellers' perceived risk and safety, and hidden geographical contexts of visible post-war landscapes. The book brings such a diversity of views, ideas and examples related to hidden geographies that can serve both to deepen their understanding and their various impacts on our lives and environment, and to attract further cross-disciplinary interest in considering hidden geographies - in research and in our every-day lives.

Principles of Sequence Stratigraphy Octavian Catuneanu. 2022-07-22 Principles of Sequence Stratigraphy, Second Edition presents principles to practical workflow that guide applications in a consistent manner that is independent of model, geological setting and the types and resolution of the data available. The book explains the points of agreement and difference between the various approaches to sequence stratigraphy, while also defining the common ground that affords the standard application of the method. This enables the practitioner to avoid nomenclatural and methodological confusions and apply sequence stratigraphy. The text is richly illustrated with hundreds of full-color diagrams and examples of outcrop, borehole and seismic data. The book's balanced approach helps students and professionals acquire a sound understanding of the concepts and methodology. It will appeal to geologists, geophysicists and engineers with interest in basin analysis, stratigraphy and sedimentology, as well as in all economic applications that concern the exploration and production of natural resources, including water, hydrocarbons, coal and sediment-hosted mineral deposits. Updates the award-winning first edition in all aspects of sequence stratigraphy, from the underlying theory to the practical applications. Presents the standard approach to sequence stratigraphic methodology, nomenclature, and classification; the role of modeling in sequence stratigraphy, and the difference between modeling and methodology. Discusses the roles of scale and stratigraphic resolution in sequence stratigraphy, and the workflow

that affords a consistent application of the method irrespective of the types of data available
Describes the three-dimensional nature of the stratigraphic architecture, and the variability of
stratigraphic sequences with the tectonic setting, depositional setting, and the climatic regime
Illustrates all concepts with high-quality, full-color diagrams, outcrop photographs, and subsurface
well data and seismic images

Street Addressing and the Management of Cities Catherine Farvacque-Vitkovi?. 2005 There has
been a dramatic demographic shift from rural areas to cities in sub-Saharan African countries over
the last few decades. This continuing urbanisation trend has created new challenges for local
governments in terms of managing urban services, since over half of the city streets in these
countries have no names or addresses, and the problem is particularly acute in the poorest
neighbourhoods. This publication examines the use of street addressing initiatives to address this
problem, giving information on current and future applications, considering examples of use in many
African countries, and setting out a methodological guide for implementing such initiatives.
