Genetic Engineering for Nitrogen Fixation Alexander

Hollaender.2012-12-06 There is a time in scientific research when a number of developments coincide making it possible to progress with a tough and complicated problem. It is believed that such a time has come in the area of biological nitrogen fixation. A better understanding of photosynthesis, cell hybridization, plasmid, and gene transfer between cells not necessarily genetically related, have opened new avenues of research. New developments in traditional genetics, cell biology, biochemistry, including enzyme chemistry, and plant physiology have brought about the feeling this is a most appropriate time to pull together the different approaches in a conference where the lines of research could be discussed and thus help to speed up developments in this area. What makes biological nitrogen fixation especially important is the promise that a good understanding of the basic problem would help us to make organisms more amenable to fix nitrogen, not only in symbiosis with legumes, but also with other plant species and develop a wider variety of organisms with the ability to fix N • It will also encourage a search for naturally occurring N₂ fixing organisms other than the traditional N₂ fixers. Some success has already been encountered in this area. Success in broadening the field of nitrogen fixing would help to increase food supply, especially in developing countries which cannot afford to purchase synthetic nitrogen sources.

Plant Stress Biology Bhoopander Giri, Mahaveer Prasad

Sharma.2021-02-05 Plants growing in the natural environment battle with a variety of biotic (pathogens infection) and abiotic

(salinity, drought, heat and cold stresses etc.) stresses. These physiological stresses drastically affect plant growth and productivity under field conditions. These challenges are likely to grow as a consequences of global climate change and pose a threat to the food security. Therefore, acquaintance with underlying signalling pathways, physiological, biochemical and molecular mechanisms in plants and the role of beneficial soil microorganisms in plant's stress tolerance are pivotal for sustainable crop production. This volume written by the experts in the stress physiology and covers latest research on plant's tolerance to abiotic and biotic stresses. It elaborates on the potential of plant-microbe interactions to avoid the damage caused by these stresses. With comprehensive information on theoretical, technical and experimental aspects of plant stress biology, this extensive volume is a valuable resource for researchers, academicians and students in the broad field of plant stress biology, physiology, microbiology, environmental and agricultural science.

Imagining Contagion in Early Modern Europe Claire L.

Carlin.2005-10-14 The ideological underpinnings of early modern theories of contagion are dissected in this volume by an integrated team of literary scholars, cultural historians, historians of medicine and art historians. Even today, the spread of disease inspires moralizing discourse and the ostracism of groups thought responsible for contagion; the fear of illness and the desire to make sense of it are demonstrated in the current preoccupation with HIV, SARS, 'mad cow' disease, West Nile virus and avian flu, to cite but a few contemporary examples. *Imagining Contagion in Early Modern Europe* explores the nature of understanding when humanity is faced with threats to its well-being, if not to its very survival.

The Historians' History of the World Henry Smith Williams.1907

A Company of Scientists Alice Stroup.1990 Who pays for science, and who profits? Historians of science and of France will discover that those were burning questions no less in the seventeenth century than they are today. Alice Stroup takes a new look at one of the earliest and most influential scientific societies, the Académie Royale des Sciences. Blending externalist and internalist approaches, Stroup portrays the Academy in its political and intellectual contexts and also takes us behind the scenes, into the laboratory and into the meetings of a lively, contentious group of investigators. Founded in 1666 under Louis XIV, the Academy had a dual mission: to advance science and to glorify its patron. Creature of the ancien régime as well as of the scientific revolution, it depended for its professional prestige on the goodwill of monarch and ministers. One of the Academy's most ambitious projects was its illustrated encyclopedia of plants. While this work proceeded along old-fashioned descriptive lines, academicians were simultaneously adopting analogical reasoning to investigate the new anatomy and physiology of plants. Efforts to fund and forward competing

lines of research were as strenuous then as now. We learn how academicians won or lost favor, and what happened when their research went wrong. Patrons and members shared in a new and different kind of enterprise that may not have resembled the Big Science of today but was nevertheless a genuine company of scientists.

History of Law and Other Humanities.Views of the legal world across the time Valerio Massimo Minale, Virginia

Amorosi.2019-07-09 The collection of essays presented here examines the links forged through the ages between the realm of law and the expressions of the humanistic culture.We collected thirty-five essays by international scholars and organized them into sections of ten chapters based around ten different themes. Two main perspectives emerged: in some articles the topic relates to the conventional approach of law and/in humanities (iconography, literature, architecture, cinema, music), other articles are about more traditional connections between fields of knowledge (in particular, philosophy, political experiences, didactics).We decided not to confine authors to one particular methodological framework, preferring instead to promote historiographical openness. Our intention was to create a patchwork of different approaches, with each article drawing on a different area of culture to provide a new angle to the history being told. The variety of authorial nationalities gives the collection a multicultural character and the breadth of the chronological period it deals with from antiquity to the contemporary age adds further depth of insight.As the element that unites the collection is historiographical interpretation, we wanted to bring to the fore its historical depth. Thus for every chapter we organized the articles in chronological order according to the historical context covered.Looking at the final outcome, it was interesting to learn that more often than not the connection between law and humanities is not simply a relation between a specific branch of the law and a single field of the

humanities, but rather a relation that could be developed in many directions at once, involving different fields of knowledge, and of arts and popular culture. We are grateful to Luigi Lacchè for his contribution to this collection. His essay outlines the coordinates of the law and humanities world, laying out the instruments necessary for an understanding of the origins of a complex methodology and the different approaches that exist within it. This project is the result of discussions that took place during the XXIII Forum of the Association of Young Legal Historians held in Naples in the spring of 2017. The book was made possible thanks to the advice and support of Cristina Vano. The Editors

The Development of Intelligence in Children Alfred Binet, Théodore Simon. 1916 This book of reprinted articles from the journal *L'Année Psychologique* as a whole constitutes a complete history and exposition of the Measuring Scale as Binet left it. In Chapter I the authors show the origin of the Scale and their first methods of attacking the problem. Chapter II describes the first results--a series of test questions arranged in order of difficulty but not yet assigned to definite years. An immense amount of work had been done on this series, and the authors may have been justly proud of what they had accomplished, though it was soon to be largely discarded for a much more useful plan. This was the so called 1905 Tests. Chapter III shows the laborious and painstaking methods of standardization. Nowhere does Binet more clearly show his genius. It is here that he has taught us the method which must be used in all extensions or revisions of the Scale, that lay any claim to scientific value. In Chapter IV he gives us the Measuring Scale for Intelligence--the so called 1908 Scale. It is the most complete statement of the Scale. Chapter V gives some of his later 1911 corrections and revisions--his last word on the subject. In making up this book we have attempted to include everything Binet and Simon wrote explanatory of the Scale. The reader will find many repetitions and some contradictions, and the date of each article should be

taken into account in deciding which is the authoritative statement. It has been thought best to include all of these repetitions and contradictions, in order to show the development of Binet's own thought in regard to his Scale. Only in this way does the marvelous work that he did on this subject become fully appreciated--Introduction. (PsycINFO Database Record (c) 2006 APA, all rights reserved).

Squid as Experimental Animals W.J., Jr. Adelman, J.M. Arnold, D.L. Gilbert. 2013-06-29 The predecessor to this book was *A Guide to the Laboratory Use of the Squid Loligo pealei* published by the Marine Biological Laboratory, Woods Hole, Massachusetts in 1974. The revision of this long out of date guide, with the approval of the Marine Biological Laboratory, is an attempt to introduce students and researchers to the cephalopods and particularly the squid as an object of biological research. Therefore, we have decided to expand on its original theme, which was to present important practical aspects for using the squid as experimental animals. There are twenty two chapters instead of the original eight. The material in the original eight chapters has been completely revised. Since more than one method can be used for accomplishing a given task, some duplication of methods was considered desirable in the various chapters. Thus, the methodology can be chosen which is best suited for each reader's requirements. Each subject also contains a mini-review which can serve as an introduction to the various topics. Thus, the volume is not just a laboratory manual, but can also be used as an introduction to squid biology. The book is intended for laboratory technicians, advanced undergraduate students, graduate students, researchers, and all others who want to learn the purpose, methods, and techniques of using squid as experimental animals. This is the reason why the name has been changed to its present title. Preceding the chapters is a list of many of the abbreviations, prefixes, and suffixes used in this volume.

Landscapes of Realism Dirk Göttsche, Rosa Mucignat, Robert Weninger. 2021-04-15 Few literary phenomena are as elusive and yet as persistent as realism. While it responds to the perennial impulse to use literature to reflect on experience, it also designates a specific set of literary and artistic practices that emerged in response to Western modernity. *Landscapes of Realism* is a two-volume collaborative interdisciplinary exploration of this vast territory, bringing together leading-edge new criticism on the realist paradigms that were first articulated in nineteenth-century Europe but have since gone on globally to transform the literary landscape. Tracing the manifold ways in which these paradigms are developed, discussed and contested across time, space, cultures and media, this first volume tackles in its five core essays and twenty-five case studies such questions as why realism emerged when it did, why and how it developed such a transformative dynamic across languages, to what extent realist poetics remain central to art and popular culture after 1900, and how generally to reassess realism from a twenty-first-century comparative perspective.

This book attempts to dissect the complexity of the molecular mechanisms of insulin action with a special emphasis on those features of the system that are subject to alteration in type 2 diabetes and other insulin resistant states. It explores insulin action at the most basic levels, through complex systems.

Comparative Physiology of Fasting, Starvation, and Food

Limitation Marshall D. McCue. 2012-05-17 All animals face the

possibility of food limitation and ultimately starvation-induced mortality. This book summarizes state of the art of starvation biology from the ecological causes of food limitation to the physiological and evolutionary consequences of prolonged fasting. It is written for an audience with an understanding of general principles in animal physiology, yet offers a level of analysis and interpretation that will engage seasoned scientists. Each chapter is written by active researchers in the field of comparative physiology and draws on the primary literature of starvation both in nature and the laboratory. The chapters are organized among broad taxonomic categories, such as protists, arthropods, fishes, reptiles, birds, and flying, aquatic, and terrestrial mammals including humans; particularly well-studied animal models, e.g. endotherms are further organized by experimental approaches, such as analyses of blood metabolites, stable isotopes, thermobiology, and modeling of body composition.

Frontiers in Eating and Weight Regulation Wolfgang Langhans, Nori Geary. 2010 The development of effective preventive and therapeutic measures to control eating and body weight involves basic physiology as well as cognitive and social psychology. The potential of molecular genetics to illuminate brain-behavior relationships became apparent with the discovery of the leptin gene in 1994. At present, molecular methodologies are being integrated with other physiological approaches, resulting in a number of options from which effective therapeutic strategies may evolve. This book highlights this exciting juncture: Fifteen leading experts present brief descriptions of some of the latest developments of the physiology of eating and weight regulation, ranging from endocrine and neural controls to genetics and functional brain imaging. These Frontier chapters are preceded by a general overview that provides requisite background on the physiology of eating as well as a conceptual framework for the Frontier chapters. Due to its special nature, this book will be of great interest to students at a variety of levels, to basic researchers already in the area or new to it, and to researchers and clinicians interested in translational issues.

Milk Proteins C.A. Barth, E. Schlimme. 2012-12-06 This book reviews the state of knowledge and progress of research on food proteins, and in particular, milk proteins. Its basis is the Symposium on Milk Proteins that was held at the Federal Dairy Research Centre in Kiel, FRG, in June, 1988. Scientists from around the world attended and addressed pure, as well as applied fields of protein research and technology. This book is divided into five sections, each adapted from the symposium's invited lectures, short communications, and poster presentations. New criteria for the biological value of dietary proteins and their relationships are considered according to: - Milk Proteins and Nitrogen Equilibrium - Milk Proteins and Ligands - Milk Proteins: Structural and Genetic Aspects - Milk Proteins: Technological and Functional Aspects - Milk Proteins and Clinical Nutrition Generally, different dietary proteins are classified according to their biological value, i.e., their capacity to cause different retention of nitrogen in the body. But we think there are other intriguing leads worth studying that may help to identify which dietary proteins are best recommended for specific dietary situations or clinical conditions. In addition, we have taken into consideration new fields such as attempts to determine the three-dimensional structure of proteins using two-dimensional NMR spectroscopy, and the application of genetic engineering to the lactating cell. In other words, we are on the way to the transgenic cow with customized milk constituents and composition.

Selected Papers on Language and the Brain N.

Geschwind.2012-12-06 Philosophers of science work not only with the methods of the sciences but with their contents as well. Substantive issues concerning the relation between mind and matter, between the material basis and the functions of cognition, have been central within the entire history of philosophy. We recall such philosophers as Aristotle, Descartes, the early Kant, Ernst Mach, and the early William James as directly inquiring of the organs and structures of thinking. Science and its philosophical self-criticism are especially and deeply united in the effort to understand the biological brain and human behavior, and so it requires no apology to include this collection of clinical studies among Boston Studies in the Philosophy of Science. The work of Dr. Norman Geschwind, well represented in this selection, explores the relation between structure and function, between the anatomy of the brain and the 'higher' behavior of men and women. As a clinical neurologist, Geschwind was led to

these studies particularly by his interest in those pathologies which have to do with human perception and language. His research into the anatomical substrates of specific disorders-and strikingly the aphasias -present a fascinating and provocative examination of fundamental questions which will concern not neurologists alone but also psychologists, physicians, linguists, speech pathologists, educators, anthropologists, historians of medicine, and philosophers, among others, namely all those interested in the characteristic modes of human activity, in speech, in perception, and in the learning process generally.

Systems of Classification in Premodern Medical Cultures

Ulrike Steinert.2020-07-21 Systems of Classification in Premodern Medical Cultures puts historical disease concepts in cross-cultural perspective, investigating perceptions,

constructions and experiences of health and illness from antiquity to the seventeenth century. Focusing on the systematisation and classification of illness in its multiple forms, manifestations and causes, this volume examines case studies ranging from popular concepts of illness through to specialist discourses on it. Using philological, historical and anthropological approaches, the contributions cover perspectives across time from East Asian, Middle Eastern and Mediterranean cultures, spanning ancient Egypt, Mesopotamia, Greece and Rome to Tibet and China. They aim to capture the multiplicity of disease concepts and medical traditions within specific societies, and to investigate the historical dynamics of stability and change linked to such concepts. Providing useful material for comparative research, the volume is a key resource for researchers studying the cultural conceptualisation of illness, including anthropologists, historians and classicists, among others.

From Revolt to Riches Theo Hermans, Reinier Salverda, Ulrich Tiedau. 2017-03-28 This collection investigates the culture and history of the Low Countries in the sixteenth and seventeenth centuries from both international and interdisciplinary perspectives. The period was one of extraordinary upheaval and change, as the combined impact of Renaissance, Reformation and Revolt resulted in the radically new conditions - political, economic and intellectual - of the Dutch Republic in its Golden Age. While many aspects of this rich and nuanced era have been

studied before, the emphasis of this volume is on a series of interactions and interrelations: between communities and their varying but often cognate languages; between different but overlapping spheres of human activity; between culture and history. The chapters are written by historians, linguists, bibliographers, art historians and literary scholars based in the Netherlands, Belgium, Great Britain and the United States. In continually crossing disciplinary, linguistic and national boundaries, while keeping the culture and history of the Low Countries in the Renaissance and Golden Age in focus, this book opens up new and often surprising perspectives on a region all the more intriguing for the very complexity of its entanglements.
