Architectural Regeneration Aylin Orbasli,Marcel Vellinga.2020-08-03 A comprehensive and detailed overview of the active regeneration, rehabilitation and revitalisation of architectural heritage. The combined processes of globalisation, urbanisation, environmental change, population growth and rapid technological development have resulted in an increasingly complex, dynamic and interrelated world, in which concerns about the meaning of cultural heritage and identity continue to grow. As the need for culturally and environmentally sustainable design grows, the challenge for professionals involved in the management of inherited built environments is to respond to this ever-changing context in a critical, dynamic and creative way. Our knowledge and understanding of the principles, approaches and methods to sustainably adapt existing buildings and places is rapidly expanding. Architectural Regeneration contributes to this knowledge-base through a holistic approach that links policy with practice and establishes a theoretical framework within which to understand architectural regeneration. It includes extensive case studies of the regeneration, rehabilitation and revitalisation of architectural heritage from around the world. Different scales and contexts of architectural regeneration are discussed, including urban, suburban, rural and temporary. At a time when regeneration policy has shifted to the recognition that 'heritage matters' and that the historic environment and creative industries are a vital driver of regeneration, an increasing workload of architectural practices concerns the refurbishment, adaptive re-use or extension of existing buildings. As a result, this book is ideal for undergraduate and graduate students of architecture, historic conservation, urban and environmental design, sustainability, and urban regeneration, as well as for practitioners and decision makers working in those fields.

A Guide to Energy Efficient Ventilation Martin W. Liddament.1996

Water Safety in Buildings World Health Organization,David Cunliffe.2011 Extensive experience shows that poor design and management of water systems in buildings can cause outbreaks of disease. The types of building, water uses, disease outcomes and individuals affected are diverse. The health risks are preventable and can be readily controlled. However, evidence from outbreak detection suggests that the overall trend is increasing. With increasing global urbanization, the overall exposure of the human population to poorly designed or managed water systems in buildings is increasing rapidly. Consequently, the risk of disease outbreaks is also increasing. Actions to reduce the risk of disease should be considered a public health priority. This document provides guidance for managing water supplies in buildings where people may drink water; use water

for food preparation; wash, shower, swim or use water for other recreational activities; or be exposed to aerosols produced by water-using devices, such as cooling towers. These uses occur in a variety of buildings, such as hospitals, schools, child and aged care, medical and dental facilities, hotels, apartment blocks, sport centres, commercial buildings and transport terminals. The target audience for this document includes the full range of actors who influence the overall safe management of building water supplies. In particular, it is directed at those who design, construct, manage, operate, maintain and regulate building water systems.

Deep Energy Retrofit Alexander Zhivov,Rüdiger Lohse.2020-07-13 This book provides detailed information on how to set up Deep Energy Retrofits (DERs) in public buildings, and shares in-depth insights into the current status of the major technologies, strategies and best practice examples of how to cost-effectively combine them. Case studies from the U.S.A. and Europe show that that Deep Energy Retrofit can be achieved with a limited core technologies bundle readily available on the market. Characteristics of some of these core technology measures depend on the technologies available on an individual nation's market, on the minimum requirements of national standards, and on economics (as determined by a life cycle cost analysis). Also, requirements to building envelope-related technologies (e.g., insulation levels, windows, vapor and water barriers, and requirements for building airtightness) depend on specific climate conditions. This Guide provides best practice examples of how to apply these technologies in different construction situations. High levels of energy use reduction using core technology bundles along with improvements in indoor climate and thermal comfort can be only achieved when a Deep Energy Retrofit adopts a quality assurance process. In addition to design, construction, commissioning, and post-occupancy phases of the quality assurance process, the Guide emphasizes the importance of clearly and concisely formulating and documenting the Owner's goals, expectations, and requirements for the renovated building during development of the statement of work. Another important component of the quality assurance process is a procurement phase, during which bidders' qualifications, their understanding of the scope of work and its requirements, and their previous experience are analyzed. The building sector holds the potential for tremendous improvements in terms of energy efficiency and reducing carbon emissions, and energy retrofits to the existing building stock represent a significant opportunity in the transition to a low-carbon future. Moreover, investing in highly efficient building materials and systems can replace long-term energy imports, contribute to cost cutting, and create a wealth of new jobs. Yet, while the technologies needed in order to improve energy efficiency are readily available, significant progress has not yet been made, and "best practices" for implementing building technologies and renewable energy sources are still relegated to small "niche" applications. Offering essential information on Deep Energy Retrofits, the book offers a valuable asset for architects, public authorities, project developers, and engineers alike.

Domestic Building Services Compliance Guide (for Part L 2013 Edition) Dclg.2014-03 This guide is referred to in the 2013 edition of Approved Document L1A and the 2010 edition of Approved Document L1B (as amended in 2013) for dwellings as a source of guidance on complying with Building Regulations requirements for space heating and hot water systems, mechanical ventilation, comfort cooling, fixed internal and external lighting and renewable energy systems.
