The Food System Geoff Tansey,Anthony Worsley.2014-03-18 Food is a massive industry and the many key players involved have very different interests. In wealthy nations those interests can range from corporate survival and maintaining profitability in a market with limited demand, to promoting a healthy diet and ensuring food safety. For the poor, the emphasis is all too often on simply getting enough to eat. As information technology and biotechnology are set to revolutionize the food system, it is essential to understand the broad context in which the different actors operate, so that all the world's people can enjoy a safe, secure, sufficient and sustainable food supply. This text provides an overview of today's dominant food system - one developed in and controlled by northern industrialized countries, and one that is becoming increasingly globalized.

Heterotrophic Plate Counts and Drinking-water Safety Jamie Bartram,J. A. Cotruvo,M. Exner,C. Fricker,A. Glasmacher.2003-08-31 Heterotrophic Plate Counts and Drinking-water Safety provides a critical assessment of the role of the Heterotrophic Plate Count (HPC) measurement in drinking water quality management. It was developed from an Expert workshop of 32 scientists convened by the World Health Organization and the WHO/NSF International Collaborating Centre for Drinking Water Safety and Treatment in Geneva, Switzerland. Heterotrophs are organisms, including bacteria, yeasts and moulds, that require an external source of organic carbon for growth. The HPC test (or Standard Plate Count), applied in many variants, is the internationally accepted test for measuring the heterotrophic microorganism population in drinking water, and also other media. It measures only a fraction of the microorganisms actually present and does not distinguish between pathogens and non-pathogens. High levels of microbial growth can affect the taste and odor of drinking water and may indicate the presence of nutrients and biofilms which could harbor pathogens, as well as the possibility that some event has interfered with the normal production of the drinking water. HPC counts also routinely increase in water that has been treated by an in-line device such as a carbon filter or softener, in water-dispensing devices and in bottled waters and indeed in all water that has suitable nutrients, does not have a residual disinfectant, and is kept under sufficient conditions. There is debate among health professionals as to the need, utility or quantitative basis for health-based standards or guidelines relating to HPC-measured regrowth in drinking water. The issues that were addressed in this work include: the relationship between HPC in drinking water (including that derived from in-line treatment systems, dispensers and bottled water) and health risks for the general public the role of HPC as an indirect indicator or index for pathogens of concern in drinking water the role of HPC in assessing the efficacy and proper functioning of water treatment and supply processes the relationship between HPC and the aesthetic acceptability of drinking water. Heterotrophic Plate Counts and Drinking-water Safety provides valuable information on the utility and the limitations of HPC data in the management and operation of piped water systems as well as other means of providing drinking water to the public. It is of particular value to piped public water suppliers and bottled water suppliers, manufacturers and users of water treatment and transmission equipment and inline treatment devices, water engineers, sanitary and clinical microbiologists, and national and local public health officials and regulators of drinking water quality.

Encyclopedia of Artificial Intelligence Philip L. Frana,Michael J. Klein.2021-04-07 This authoritative reference work will provide readers with a complete overview of artificial intelligence (AI), including its historic development and current status, existing and projected AI applications, and present and potential future impact on the United States and the world. Some people believe that artificial intelligence (AI) will revolutionize modern life in ways that improve human existence. Others say that the promise of AI is overblown. Still others contend that AI applications could pose a grave threat to the economic security of millions of people by taking their jobs and otherwise rendering them obsolete—or, even worse, that AI could actually spell the end of the human race. This volume will help users understand the reasons AI development has both spirited defenders and alarmed critics; explain theories and innovations like Moore's Law, mindcloning, and Technological Singularity that drive AI research and debate; and give readers the information they need to make their own informed judgment about the promise and peril of this technology. All of this coverage is presented using language and terminology accessible to a lay audience.

Online Teaching and Learning in Higher Education Pedro Isaias,Demetrios G. Sampson,Dirk Ifenthaler.2020-09-29 This book is to explore a variety of facets of online learning environments to understand how learning occurs and succeeds in digital contexts and what teaching strategies and technologies are most suited to this format. Business, health, government and education are some of the core sectors of society which have been experiencing deep transformations due to a generalized digitalization. While these changes are not novel, the swift progress of technology and the rising complexity of digital environments place a focus on the need for further research and novel strategies. In the context of education, the promise of increased flexibility and broader access to educational resources is impelling much of higher education's course offerings to online

environments. The 21st century learner requires an education that can be pursued anytime and anywhere and that is more aligned with the demands of a digital society. Online education not only assists students to successfully integrate a workforce that is increasingly digital, but it helps them to become more comfortable with the use of technology in general and, hence, more prepared to be prolific digital citizens. The variety of settings portrayed in this volume attest to the unlimited opportunities afforded by online learning and serve as valuable evidence of its benefit for students' educational experience. Moreover, these research efforts assist a more comprehensive reflection about the delivery of higher education in the context of online settings.

Crossing the Global Quality Chasm National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Board on Health Care Services, Board on Global Health, Committee on Improving the Quality of Health Care Globally. 2019-01-27 In 2015, building on the advances of the Millennium Development Goals, the United Nations adopted Sustainable Development Goals that include an explicit commitment to achieve universal health coverage by 2030. However, enormous gaps remain between what is achievable in human health and where global health stands today, and progress has been both incomplete and unevenly distributed. In order to meet this goal, a deliberate and comprehensive effort is needed to improve the quality of health care services globally. *Crossing the Global Quality Chasm: Improving Health Care Worldwide* focuses on one particular shortfall in health care affecting global populations: defects in the quality of care. This study reviews the available evidence on the quality of care worldwide and makes recommendations to improve health care quality globally while expanding access to preventive and therapeutic services, with a focus in low-resource areas. *Crossing the Global Quality Chasm* emphasizes the organization and delivery of safe and effective care at the patient/provider interface. This study explores issues of access to services and commodities, effectiveness, safety, efficiency, and equity. Focusing on front line service delivery that can directly impact health outcomes for individuals and populations, this book will be an essential guide for key stakeholders, governments, donors, health systems, and others involved in health care.

Fragments of Parmenides A. H. Coxon. 2009-11-22 This book is a revised and expanded version of A.H. Coxon's full critical edition of the extant remains of Parmenides of Elea—the fifth-century B.C. philosopher by many considered "one of the greatest and most astonishing thinkers of all times." (Karl Popper) Coxon's presentation of the complete ancient evidence for Parmenides and his comprehensive examination of the fragments, unsurpassed to this day, have proven invaluable to our understanding of the Eleatic since the book's first publication in 1986. This edition, edited by Richard McKirahan and with a new preface by Malcolm Schofield, is released on the 100th anniversary of Coxon's birth. This new edition for the first time includes English translations of the testimonia and of any Ancient Greek throughout the book, as well as an English/Greek glossary by Richard McKirahan, and revisions by the late author himself. The text consists of Coxon's collations of the relevant folios of manuscripts of Sextus Empiricus, Proclus and Simplicius and includes all extant fragments, a commentary, the testimonia, a complete list of sources, linguistic parallels from both earlier and later authors, and the fullest critical apparatus that has appeared since Diels' *Poetarum Philosophorum Fragmenta* (1901). The collection of testimonia includes the philosophical discussions of Parmenides by Plato, Aristotle and the Neoplatonists, most of which had been omitted by Diels. The introduction discusses the history of the text, the language and form of the poem, Parmenides' use and understanding of the verb 'to be', his place in the history of earlier and later philosophy and the biographical tradition. In the commentary Coxon deals in detail with both the language and the subject matter of the poem and pays full attention to Parmenides' account of the physical world. The appendix relates later Eleatic arguments to those of Parmenides.

European Film and Television Co-production Julia Hammett-Jamart, Petar Mitric, Eva Novrup Redvall. 2019-01-28 This volume offers an up-to-date analysis of film and television co-production in Europe. It brings together the voices of policy professionals, industry practitioners and media industry scholars to trace the contours of a complex practice that is of increasing significance in the global media landscape. Analysis of the latest production statistics sits alongside interviews with producers and the critical evaluation of public film policies. The volume incorporates contributions from representatives of major public institutions—Eurimages, the European Audiovisual Observatory and the European Commission—and private production companies including the pan-European Zentropa Group. Policy issues are elucidated through case studies including the Oscar-winning feature film *Ida*, the BAFTA-winning *I am not a Witch* and the Danish television serial *Ride Upon the Storm*. Scholarly articles span co-development, co-distribution and regional cinemas as well as emerging policy challenges such as the digital single market. The combination of qualitative and quantitative approaches, and the juxtaposition of industry and scholarly voices, provides a unique perspective on European co-production that is information-rich, complex and stimulating, making this volume a valuable companion for students, scholars, and industry professionals.

Debating Euthanasia Emily Jackson, John Keown. 2011-12-02 In this new addition to the 'Debating Law' series, Emily Jackson and John Keown re-examine the legal and ethical aspects of the euthanasia debate. Emily Jackson argues that we owe it to everyone in society to do all that we can to ensure that they experience a 'good death'. For a small minority of patients who experience intolerable and unrelievable suffering, this may mean helping them to have an assisted death. In a liberal society, where people's moral views differ, we should not force individuals to experience deaths they find intolerable. This is not an argument in favour of dying. On the contrary, Jackson argues that legalisation could extend and enhance the lives of people whose present fear of the dying process causes them overwhelming distress. John Keown argues that voluntary euthanasia and physician-assisted suicide are gravely unethical and he defends their continued prohibition by law. He analyses the main arguments for relaxation of the law - including those which invoke the experience of jurisdictions which permit these practices - and finds them wanting. Relaxing the law would, he concludes, be both wrong in principle and dangerous in practice, not least for the dying, the disabled and the disadvantaged.

National Classification System for Contaminated Sites Canadian Council of Ministers of the Environment, Canadian Council of Ministers of the Environment. Subcommittee on Classification of Contaminated Sites. 1992 This National Classification System for Contaminated Sites is a method for evaluating contaminated sites according to their current or potential adverse impact on human health and the environment. The system was developed based on a review of existing provincial, territorial, and international methods for classifying contaminated sites and a review of the availability of Canadian contaminated site information. The

system uses an additive numerical method that assigns scores to contaminant characteristics, exposure pathways, and receptors. This document describes the development of the system and its purpose; the methodology of the system; and methods of use, including minimum data requirements, use of the detailed evaluation form and the short evaluation form, and site classification categories.

Sexually Transmitted Infections Among Adolescents Karl L. Dehne, World Health Organization, Gabriele Riedner. 2005 This document presents a comprehensive literature review, documenting existing experience with the provision of services for sexually transmitted infections (STIs) to adolescents. It draws from programme experience worldwide, including the following service delivery models: public and nongovernmental organization health services which have been made adolescent-friendly, sexual and reproductive health clinics and multipurpose centres for young people, school-based or school-linked services, and community-based and private sector services.

The Neurological Assessment of the Preterm and Full-term Newborn Infant Lilly M. S. Dubowitz, Victor Dubowitz, Eugenio Mercuri. 1999-01-26 This is the second edition of the manual describing this popular and practical tool for the clinical neurological examination of the newborn. In addition to a number of developments on the original scheme in the light of clinical and research experience, the new manual also facilitates the recording and performance of the examination by providing clear information on its administration aided by illustrative diagrams. New sections include a simplified version of the examination suited to inexperienced staff, applicable both for screening and for use in developing countries; a revised proforma that may be used for the follow-up of infants beyond the neonatal period; and a new section describing clinical patterns in newborns with brain lesions and their correlation with imaging and neurological findings. Scoring tables are included in the back of the book.

From Day One Joyce Banda. 2018-06-12 The case for narrowing the gender gap is well established, and programs seeking to empower women in sub-Saharan Africa have multiplied. Yet a critical piece is missing: a focus on rural girls from zero to ten years old. Discrimination and social norms that penalize girls and women do not start at adolescence, and by the time many rural girls are 10, it is often too late to undo the damage that has already been done. As an African woman leader who has grown up on the African soil, Joyce Banda, Malawi's first female president and Africa's second, has seen firsthand how young rural girls face obstacles in areas that are critical in shaping their future. This book makes the case of how, if African girls are to realize their potential as leaders and change the narrative of their continent, gender interventions should and can be started from day one. For we cannot leave any girl behind.

Optimizing Chloramine Treatment Gregory J. Kirmeyer. 2004 This manual recommends optimal operational criteria for chloramine application to enhance and protect distribution system water quality. It examines the chemical characteristics of chloramines, documents the use of chloramines with case studies, and provides planning, design, startup, and monitoring strategies for optimizing the use of chloramines.

Advanced Oxidation Processes for Water and Wastewater Treatment Simon Parsons. 2004-03-01 The suitability of Advanced Oxidation Processes (AOPs) for pollutant degradation was recognised in the early 1970s and much research and development work has been undertaken to commercialise some of these processes. AOPs have shown great potential in treating pollutants at both low and high concentrations and have found applications as diverse as ground water treatment, municipal wastewater sludge destruction and VOCs control. Advanced Oxidation Processes for Water and Wastewater Treatment is an overview of the advanced oxidation processes currently used or proposed for the remediation of water, wastewater, odours and sludge. The book contains two opening chapters which present introductions to advanced oxidation processes and a background to UV photolysis, seven chapters focusing on individual advanced oxidation processes and, finally, three chapters concentrating on selected applications of advanced oxidation processes. Advanced Oxidation Processes for Water and Wastewater Treatment will be invaluable to readers interested in water and wastewater treatment processes, including professionals and suppliers, as well as students and academics studying in this area. Dr Simon Parsons is a Senior Lecturer in Water Sciences at Cranfield University with ten years' experience of industrial and academic research and development.

Contaminants in the Subsurface National Research Council, Division on Earth and Life Studies, Water Science and Technology Board, Committee on Source Removal of Contaminants in the Subsurface. 2005-04-23 At hundreds of thousands of commercial, industrial, and military sites across the country, subsurface materials including groundwater are contaminated with chemical waste. The last decade has seen growing interest in using aggressive source remediation technologies to remove contaminants from the subsurface, but there is limited understanding of (1) the effectiveness of these technologies and (2) the overall effect of mass removal on groundwater quality. This report reviews the suite of technologies available for source remediation and their ability to reach a variety of cleanup goals, from meeting regulatory standards for groundwater to reducing costs. The report proposes elements of a protocol for accomplishing source remediation that should enable project managers to decide whether and how to pursue source remediation at their sites.

Decentralisation and the Management of Ethnic Conflict Aisling Lyon. 2015-10-30 Ethnic inequalities in divided societies can exacerbate social divisions and lead to conflict. Reducing these inequalities could have a de-escalating effect, yet there is little consensus on how this can be achieved most effectively and sustainably. Decentralisation is held to improve inter-ethnic relations in multi-ethnic states by allowing territorially concentrated groups greater autonomy over their own affairs, and the case of the Republic of Macedonia offers an example of the successes and failings of decentralisation. Decentralisation and the Management of Ethnic Conflict offers new insight into the dynamics of conflict management through decentralisation, using an in-depth case study of decentralisation in the Republic of Macedonia between 2005 and 2012. Guided by the concept of horizontal inequalities, the volume identifies the factors which influenced the decision to devolve responsibilities to the municipalities after 2001. Taking an integrative approach to studying the political, administrative, and fiscal dimensions of decentralisation and its implementation, the book investigates whether these institutional reforms have indeed contributed to the reduction of inequalities between Macedonia's ethnic groups, and what the obstacles were in those areas in which decentralisation has not reached its full potential. The key lesson of the Macedonian case is that attempts to solve internal self-determination conflicts through decentralisation will fail if local self-governance exists only in form but not in substance. This book contributes to a more nuanced understanding of the challenges facing different forms of decentralisation in the long term, and as such represents a significant contribution to Conflict Studies, Development Studies and Political Science more generally.

Russia R. Kanet. 2007-06-28 The authors argue that Vladimir Putin and his advisors are committed to re-establishing Russia as a great power and that the existence of nuclear weapons and the revival of the Russian economy have provided the foundations for an expanded Russian role in global affairs.

Alternatives for Managing the Nation's Complex Contaminated Groundwater Sites National Research Council, Division on Earth and Life Studies, Water Science and Technology Board, Committee on Future Options for Management in the Nation's Subsurface Remediation Effort. 2013-02-27 Across the United States, thousands of hazardous waste sites are contaminated with chemicals that prevent the underlying groundwater from meeting drinking water standards. These include Superfund sites and other facilities that handle and dispose of hazardous waste, active and inactive dry cleaners, and leaking underground storage tanks; many are at federal facilities such as military installations. While many sites have been closed over the past 30 years through cleanup programs run by the U.S. Department of Defense, the U.S. EPA, and other state and federal agencies, the remaining caseload is much more difficult to address because the nature of the contamination and subsurface conditions make it difficult to achieve drinking water standards in the affected groundwater. Alternatives for Managing the Nation's Complex Contaminated Groundwater Sites estimates that at least 126,000 sites across the U.S. still have contaminated groundwater, and their closure is expected to cost at least \$110 billion to \$127 billion. About 10 percent of these sites are considered complex, meaning restoration is unlikely to be achieved in the next 50 to 100 years due to technological limitations. At

sites where contaminant concentrations have plateaued at levels above cleanup goals despite active efforts, the report recommends evaluating whether the sites should transition to long-term management, where risks would be monitored and harmful exposures prevented, but at reduced costs.

Nuclear Weapons under International Law Gro Nystuen,Stuart Casey-Maslen,Annie Golden Bersagel.2014-08-28 Nuclear Weapons under International Law is a comprehensive treatment of nuclear weapons under key international law regimes. It critically reviews international law governing nuclear weapons with regard to the inter-state use of force, international humanitarian law, human rights law, disarmament law, and environmental law, and discusses where relevant the International Court of Justice's 1996 Advisory Opinion. Unique in its approach, it draws upon contributions from expert legal scholars and international law practitioners who have worked with conventional and non-conventional arms control and disarmament issues. As a result, this book embraces academic consideration of legal questions within the context of broader political debates about the status of nuclear weapons under international law.

Measuring National Power in the Postindustrial Age Ashley J. Tellis.2001 The arrival of postindustrial society has transformed the traditional bases of national power, and thus the methods used to measure the relative power of nations should be reassessed as well. Appreciating the true basis of national power requires not merely a meticulous detailing of visible military assets but also a scrutiny of larger capabilities embodied in such variables as the aptitude for innovation, the soundness of social institutions, and the quality of the knowledge base--all of which may bear upon a country's capacity to produce the one element still fundamental to international politics: effective military power. The authors reconfigure the notion of national power to accommodate a wider understanding of capability, advancing a conceptual framework that measures three distinct areas--national resources, national performance, and military capability--to help the intelligence community develop a better evaluation of a country's national power. The analysis elaborates the rationale for assessing each of these areas and offers ideas on how to measure them in tangible ways. An analyst's handbook, RAND/MR-1110/1-A, is also available.
