Cardiovascular diseases (CVDs) are a major cause of premature death worldwide and a cause of loss of disability-adjusted life years. For most types of CVD early diagnosis and intervention are independent drivers of patient outcome. Clinicians must be properly trained and centres appropriately equipped in order to deal with these critically ill cardiac patients. This new updated edition of the textbook continues to comprehensively approach all the different issues relating to intensive and acute cardiovascular care and addresses all those involved in intensive and acute cardiac care, not only cardiologists but also critical care specialists, emergency physicians and healthcare professionals. The chapters cover the various acute cardiovascular diseases that need high quality intensive treatment as well as organisational issues, cooperation among professionals, and interaction with other specialities in medicine. SECTION 1 focusses on the definition, structure, organisation and function of ICCU's, ethical issues and quality of care. SECTION 2 addresses the pre-hospital and immediate in-hospital (ED) emergency cardiac care. SECTIONS 3-5 discuss patient monitoring, diagnosis and specific procedures. Acute coronary syndromes (ACS), acute decompensated heart failure (ADHF), and serious arrhythmias form SECTIONS 6-8. The main other cardiovascular acute conditions are grouped in SECTION 9. Finally SECTION 10 is dedicated to the many concomitant acute non-cardiovascular conditions that contribute to the patients' case mix in ICCU. This edition includes new chapters such as low cardiac output states and cardiogenic shock, and pacemaker and ICDs: troubleshooting and chapters have been extensively revised. Purchasers of the print edition will also receive an access code to access the online version of the textbook which includes additional figures, tables, and videos to better illustrate diagnostic and therapeutic techniques and procedures in IACC. **Textbook of Real-Time Three Dimensional Echocardiography** Luigi Badano, Roberto M. Lang, Jose Luis Zamorano. 2010-12-07 This Textbook will give the reader a detailed understanding of the use of 3D echo covering a wide range of topics; from the evolution of RT3D echo to the role of RT3D echo in drug trials, including chapters on the Principles of Transthoracic and Transesophageal Real-time 3D echocardiography. Other books in this area are more varied, less specific.

**Essential Echocardiography** Alisdair Ryding. 2008-01-01 This title provides a step by step manual for the complete echo-novice, focusing on the practicalities of performing an examination, and the interpretation of images. The book balances theory with practical step-by-step guidance, clear explanations and helpful illustrations. It starts with the basic concepts of how ultrasound works and moves on to how to perform an echo. Most of the chapters concentrate on assessing specific aspects of cardiac function and systematically cover normal function as well as the whole range of pathologies encountered in day-to-day clinical practice. The text avoids unnecessary technicalities, placing particular emphasis on the diagnostic features of example cases, and covering the entire breadth of adult cardiology. In addition to the still images the majority of the echo images will be presented additionally in a dynamic form in an accompanying CD-Rom that mirrors the presentation of the textbook. The combination of the book and the CD-Rom provides an unparalleled learning experience for people who do not routinely practise echocardiography. Another unique feature is a self-assessment section which presents case scenarios and images for interpretation. This provides invaluable feedback on diagnostic skills, and reinforces the teaching of the main textbook.
