Biogas Technology R. S. Khoiyangbam, Navindu Gupta, Sushil Kumar. 2011-01-01 The global demand for energy is met mainly by fossil fuels. Their excessive and indiscriminate use, coupled with increasing demand for energy, will soon deplete their existing reserves. Therefore, it is extremely important to find alternative, environment-friendly, and ecologically sound sources of energy for meeting the present and future energy requirements. *Biogas Technology: Towards Sustainable Development* makes an attempt to explore the potential of utilizing biodegradable biomass as fuel and manure.

Technical Evaluation and Standardization of Biogas Plants in Ghana Edem Bensah, Abeeku Brew-Hammond. 2012-02 This book reviews the nature of biogas promotion strategies as well as biogas digester designs widely disseminated in Ghana and other countries. It looks into challenges facing the design, construction, and operation of biogas plants in Ghana based on a field survey of 50 biogas installations, and interviews with both end-users and service providers. From the survey, sanitation was found to be the main motivational reason for people using biogas plants. Only 22 of the surveyed installations were functioning satisfactorily. Reasons for non-functioning include non-availability of dung, breakdown of balloon gasholders, absence of maintenance services, lack of operational knowledge, gas leakages, and bad odour in toilet chambers of biolatrines. Design

problems observed involved the wrong orientation of inlet pipes of biolatriner digesters and the faulty interconnection between tandem digesters. This book recommends the development of a national programme focussing on three major areas - sanitation, energy, and organic fertilizer production. It further advocates for the promotion of standardized digesters for large scale promotion in Ghana.

How do biogas solutions influence the sustainability of bio-based industrial systems? Linda Hagman.2018-11-26 Biomass is a valuable and limited resource that should be used efficiently. The potential of replacing fossil-based products with bio-based ones produced in biobased industrial systems is huge. One important aim of increasing the share of biobased products is to improve the sustainability of systems for production and consumption. Therefore, it is important to evaluate what solutions are available to improve the sustainability performance of bio-based industrial systems, and if they also bring negative impacts. The thesis focuses on assessing the role of biogas solutions in developing sustainable bio-based systems. Such assessments are often quite narrow in their scope and focus on quantitative environmental or economic aspects. This thesis aims at also including feasibility related aspects involving the contextual conditions that are assessed more qualitatively. Biogas solutions are identified as a versatile approach to treat organic materials which are generated in large volumes in bio-based industrial systems. The results show that biogas solutions in bio-based industrial systems (i) improve circular flows of energy and nutrients, (ii) are especially viable alternatives when the quality of the by-product streams become poorer, and (iii) may improve the profitability of the bio-based industrial system. To perform better assessments of these systems, it seems valuable to broaden the set of indicators assessed and include feasibility-related indicators, preferably through the involvement of relevant stakeholders as they contribute with different perspectives and can identify aspects that influence the sustainability in different areas. Future studies could benefit from applying those broader assessments on more cases to build on a more generalisable knowledge base.

Anaerobic Digestion in Built Environments Anna Sikora.2021-11-03 Anaerobic digestion of biomass to biogas, commonly occurring in natural anoxic ecosystems, is an excellent method for utilizing wastes and producing green energy. This book presents examples of local installations of AD, or their proposals, located at small factories, workplaces, and in rural areas and housing complexes. The facilities consider the specific nature of the region, site conditions, and specificity of the utilized wastes. They protect the environment and ensure dispersed energy production. The latter is of great economic significance due to its closeness to end customers. Small local installations expand the pool of renewable energy on a global scale.
