The Science of Near-Death Experiences John C.

Hagan.2017-01-30 What happens to consciousness during the act of dying? The most compelling answers come from people who almost die and later recall events that occurred while lifesaving resuscitation, emergency care, or surgery was performed. These events are now called near-death experiences (NDEs). As medical and surgical skills improve, innovative procedures can bring back patients who have traveled farther on the path to death than at any other time in history. Physicians and healthcare professionals must learn how to appropriately treat patients who report an NDE. It is estimated that more than 10 million people in the United States have experienced an NDE. Hagan and the contributors to this volume engage in evidence-based research on near-death experiences and include physicians who themselves have undergone a near-death experience. This book establishes a new paradigm for NDEs.

Anatomofisiología y patología básicas María del Carmen López Viado.2021

From Them to Us Mel Ainscow, Tony Booth.2005-06-23 Inclusive education has become a phrase with international currency shaping the content of conferences and national educational policies around the world. But what does it mean? Is it about including a special group of disabled learners or students seen to have 'special needs' (them) or is it concerned with making educational institutions inclusive, responsive to the diversity of all their students (us)? In this unique comparative study, the editors have brought together an international team of researchers from eight countries to develop case-studies which explore the processes of inclusion and exclusion within a school or group of schools set in its local and national context. The study includes classroom observation, the experiences of the school day of students and interviews with staff, students, parents and school governors. Through an innovative juxtaposition of the case-studies and commentaries on them, differences of perspective within and between countries are revealed and analysed. The study arose from a dissatisfaction with previous research, which presents 'national perspectives' or seeks findings that have global significance. This book avoids such simplification and draws attention to the problems of translation of practice across cultures. The editors start from an assumption of diversity of perspective which like the diversity of students within schools can be viewed as problematic or as a resource to be recognized and celebrated.

Toxicología fundamental Manuel Repetto Jiménez, Guillermo Repetto Kuhn. 2009 La publicación de esta cuarta edición de *Toxicología Fundamental* demuestra, por sí misma, el interés que la obra despierta entre estudiosos y profesionales, y no sólo de la Toxicología y ciencias afines (Ciencias Experimentales, de la Vida y Ambientales, Medicina Clínica y Forense, Ingenierías, etc.) que han agotado las anteriores ediciones. La obra no es un diccionario o catálogo de tóxicos sino una revisión progresiva y panorámica de la ciencia toxicológica en nuestros días. Aunque mantiene su

estructura original de dieciséis capítulos, todos ellos han sido revisados, actualizados y ampliados, cuidando en todo momento que la exposición sea perfectamente asequible a lectores con diferente formación previa; por ello, las materias se inician con elementos de Biología, Anatomía, Química, Física, Farmacología o Medicina, que se van profundizando a lo largo del capítulo, tratando de incorporar los conocimientos toxicológicos basados en la evidencia más reciente y los avances sobre mecanismos de toxicidad que permiten comprender los procesos fisiopatológicos y las posibilidades terapéuticas; igualmente, las bases toxicocinéticas contribuyen al diagnóstico y a la interpretación de los resultados analíticos; se ha renovado en su totalidad el capítulo de valoración de la toxicidad y del riesgo tóxico. Se han introducido nuevos esquemas, figuras y tablas que ayudan a clarificar los conceptos con menor exigencia memorística.

INDICE RESUMIDO: Desarrollo y evolución histórica de la Toxicología. Conceptos y definiciones: Toxicología, Toxicidad. Tránsito de los xenobióticos en el organismo. Biotransformaciones de los tóxicos. Fenómenos de inhibición, activación e inducción enzimática. Mecanismos de toxicidad. Factores que modifican la toxicidad. Interacciones entre fármacos. Antagonistas y antidotos. Evaluación de la toxicidad y del riesgo. Toxicología experimental. Toxicología clínica. Diagnóstico de la intoxicación. El análisis químico-toxicológico.
