Putting Nigeria to Work Volker Treichel.2010-06-17 Public debate in Nigeria on the country's progress since its return to democracy in 1999 has been dominated by two seemingly opposite themes. The first theme is the strong growth performance of the non-oil economy. This success has been marked by sharp increases in agriculture, trade, and construction and by the emergence of new industries in the financial, telecommunications, and entertainment sectors, supported by sound macroeconomic policies and structural reforms. The second, opposing theme is the seeming failure of Nigeria's much improved economic performance to reduce unemployment, especially among the young. Rising levels of unemployment have increased militancy among the young and impacted negatively on public order. 'Putting Nigeria to Work: A Strategy for Employment and Growth' looks at the ways in which Nigeria's improved economic performance has impacted the labor market. A number of relevant factors are carefully examined and analyzed, including industrial policy and the investment environment, the effects of restrictive trade policies on growth, and the ability of the technical and vocational education system to address the country's skills gap. The book proposes a strategy that will allow Nigeria to increase the availability of quality jobs, reduce rising youth unemployment, and sustain and further accelerate the country's economic performance and growth. At the core of this strategy are targeted interventions aimed at removing binding constraints to growth in sectors of the economy that are already growing fast, but have the potential to grow faster and have significant employment-creating potential.

Leadership Strategies for Global Supply Chain Management in Emerging Markets Dwivedi, Ashish, Alshamrani, Mohammed Saad. 2020-05-22 In recent decades, the rapid expansion of trade and investment among developing countries has resulted in a scenario wherein firms from developing countries account for an increasing share of capital, goods, and wealth in the global economy. America, and North America. More specifically, the chapters examine the situations, activities, and education of teachers in the societal contexts of Cuba, Equatorial Guinea, France, Germany, Ghana, Hong Kong, Ireland, Lithuania, The Netherlands, Scotland, Spain, Turkey, and the United States. The authors address a variety of important questions related to a group of employees who are key actors in determining the quality of education: How can pre-service teacher education best be organized for different purposes in various settings? What kinds of activities should be organized and who should be involved in in-service professional development to promote teacher capacity and commitment to perform their roles in classrooms and communities? What kinds of incentives can motivate teachers' engagement with various aspects of their work? How do certain educational policies and reforms promote the professionalization or the deprofessionalization and proletarianization of teaching? What are the opportunities and constraints for teachers as they seek to operate within the micro-politics of schools and the macro-politics of society? The book thus contributes to refining our understanding of the critical theoretical issues in the field of comparative and international education as well as calling attention to dynamics that should be considered in developing and implementing as well as critiquing and resisting educational policies in varying contexts.

In the last few decades, relationships within the transport and logistics industry have become more complex due to the rising importance of information and communication technology, the growth of just-in-time delivery and increasing globalization. Such changes call for new forms of training, both managerial and vocational, for the continued development of the industry. Through an original methodology, it advocates an innovative and modular training programme to meet the needs of expertise and flexibility within the sector. The results can be used by the industry in general as best practice operative guidelines.

Increasing Supply Chain Performance in Digital Society Leon, Ramona Diana, Rodriguez-Rodriguez, Raul, Alfaro-Saiz, Juan-Jose. 2022-06-03 Currently, the main operations of companies are either directly or indirectly interconnected in a global-world context. Competition has drifted from an individual to a supply chain basis, where digitalization plays a key role. Companies with better digital capabilities achieve sustainable competitive market advantages. In this context, companies must identify their current position in terms of digital capabilities, link these capabilities to supply chain performance, define their future desired competitive position and how their digital capabilities are going to help them to get there, and forecast their future desired performance not only at the individual company but also at the supply chain level. Increasing Supply Chain Performance in Digital Society considers innovative approaches to measure, manage, and project towards the future of the digital capabilities of both individual companies and supply chains. It also examines the relations these have with performance being a practical tool to identify not only where they are today in terms of digital capabilities but also where they should be long term and the resources needed to get them there. Covering a range of topics such as artificial intelligence and risk management, this reference work is ideal for practitioners, researchers, scholars, business owners,

Freight Transport and the Modern Economy Michel Savy,June Burnham.2013-06-26 Freight Transport and the Modern Economy adapts a well-known textbook by Michel Savy, revising, extending and updating it for British, European and international readers. It deals not only with the technical aspects of transport, logistics and supply chain management, but also the interactions between transport professionals and the public authorities in the modern social, political, economic and environmental context. The transport of freight is presented as a system, mixing empirics and theory, showing how transport itself functions and also its strong influence on the modern economy, with a growing volume of production, turnover and employment. The nature of freight transport, an industrial process widely marketed as a service, is analysed in depth, explaining the main characteristics of the transport operation, its market and the regulatory context. The main actors, the professional actors (carriers, shippers and other agents) and the public authorities are introduced, and their behaviour and interactions are clarified. This comprehensive approach allows the reader to go further and consider in particular the approaches and practices of transport by carriers, customers, logistics managers, political decision makers and citizens, to tackle long range issues such as the 'decoupling' of production and transport recommended by some institutions and experts, and to explore the need for more infrastructure, or the capacity of the freight transport industry to reduce its contribution to pollution and climate change. This book treats freight transport as a whole system in its technical, economic, social, political and environmental context, in contrast to existing transport literature focused on individual aspects, such as transportation planning (usually for cars or passengers), logistics (essentially management issues), or individual transport

modes. This book is comprehensive in its treatment of freight transport and in its use of multiple disciplinary perspectives.
