EBOOK: Teaching Geography 11-18: A Conceptual Approach David Lambert,John Morgan.2010-01-16 This is a must read for all 11-18 geography educators. It argues for a new geography curriculum founded on a set of major concepts that are profoundly relevant to 21st century life. For years, books on 11-18 geography education have focussed on classroom techniques, new pedagogic technologies and alternative modes of student assessment. Not this one. 'Teaching Geography 11-18' digs deep. It asks not only what geography is for, but bases its answer on a set of key concepts able to sustain an exciting and relevant curriculum. It also grounds its many arguments in the latest geographical research, thus re-establishing the broken connection between geography teaching in schools and that in higher education. Professor Noel Castree, University of Manchester, UK This engaging and stimulating book aims to radically re-shape and sharpen debates in geography education by taking an entirely fresh approach to both the subject and its place in secondary education.Key questions addressed in this book include: What is the place of geography within the secondary school curriculum? To what extent does school geography reflect and engage with contemporary issues and theories from the wider subject? What are the issues, challenges and opportunities of a concept-led approach to teaching geography? What are the implications of ICT, media and technology for the future of geography teaching in schools? Influenced by the revised national curriculum for geography which has reduced the prescribed content to be covered, this book offers an objective view of the concept-led approach. The new focus on concepts represents a significant shift in how geography is to be taught in schools, yet there has been little extended discussion of what a 'concept-led' approach to teaching and learning would entail. This book fills that void by examining geography's key concepts, and providing teachers with a theoretically robust and practical approach to curriculum planning using a concept-led approach. This is essential reading for all secondary geography teachers, trainee teachers and anyone involved with education and curriculum planning.

Geography Education for Global Understanding Ali Demirci,Rafael de Miguel González,Sarah Witham Bednarz.2018-04-26 This book presents the core concepts of geographical education as a means of understanding global issues from a spatial perspective. It treats education, supported by high standards, approaches, methodologies, and resources, as essential in exploring the interactions of the world's human and environmental systems at local, regional, and global scales embedded in the nature of the discipline of geography. It covers topics such as climate change, sustainable development goals, geopolitics in an uncertain world, global crisis, and population flows, which are of great interest to geography researchers and social sciences educators who want to explore the complexity of contemporary societies. Highly respected scholars in geography education answer

questions on key topics and explain how global understanding is considered in K-12 education in significant countries around the globe. The book discusses factors such as the Internet, social media, virtual globes and other technological developments that provide insights into and visualization - in real time - of the intensity of relationships between different countries and regions of the earth. It also examines how this does not always lead to empathy with other political, cultural, social and religious values: terrorism threats and armed conflicts are also essential features of the global world. This book opens the dialogue for global understanding as a great opportunity for teachers, educators, scholars and policy makers to better equip students and future citizens to deal with global issues.

An Introduction to Statistical Problem Solving in Geography J. Chapman McGrew, Jr., Charles B. Monroe. 2009-04-22 Written for undergraduate geography majors and entry-level graduate students with limited backgrounds in statistical analysis and methods, McGrew and Monroe provide a comprehensive and understandable introduction to statistical methods in a problem-solving framework. Engaging examples and problems are drawn from a variety of topical areas in both human and physical geography and are fully integrated into the text. Without compromising statistical rigor or oversimplifying, the authors stress the importance of written narratives that explain each statistical technique. After introducing basic statistical concepts and terminology, the authors focus on nonspatial and spatial descriptive statistics. They transition to inferential problem solving, including probability, sampling, and estimation, before delving deeper into inferential statistics for geographic problem solving. The final chapters examine the related techniques of correlation and regression. A list of major goals and objectives is included at the end of each chapter, allowing students to monitor their own progress and mastery of geographic statistical materials. An epilogue, offering over 150 geographic situations, gives students a chance to figure out which statistical technique should be used for a particular situation.

An Introduction to Statistical Problem Solving in Geography Arthur J. Lembo, Jr., J. Chapman McGrew, Jr. 2023-10-27 The fourth edition of *An Introduction to Statistical Problem Solving in Geography* continues its standing as the definitive introduction to statistics and quantitative analysis in geography. Assuming no reader background in statistics, the authors lay out the proper role of statistical analysis and methods in human and physical geography. They delve into the calculation of descriptive summaries and graphics to explain geographic patterns and use inferential statistics (parametric and nonparametric) to test for differences (t-tests, ANOVA), relationships (regression and correlation), and spatial statistics (point and area patterns, spatial autocorrelation). This edition introduces more advanced topics, including logistic regression, two-factor ANOVA, and spatial estimation (inverse distance weighting, Kriging). Many chapters also include thought-provoking discussions of statistical concepts as they relate to the COVID-19 pandemic. Maintaining an

exploratory and investigative approach throughout, the authors provide readers with real-world geographic issues and more than 50 map examples. Concepts are explained clearly and narratively without oversimplification. Each chapter concludes with a list of major goals and objectives. An epilogue offers over 150 open-ended geographic situations, inviting students to apply their new statistical skills to solve problems currently affecting our world.

It is about the land, the people on that land, the delicate balance of nature, and our very interdependence upon it, despite the miracles of technology and grocery stores. Completely revised and updated, it tours the world, its natural features, and the ever-changing mark humans make on our planet, answering 1,200 questions from the trivia (longest, hottest, tallest) to how geography has influenced history, religion, architecture, and the location of cities, including Who first had the idea that there is a magnetic North Pole? What is interesting about Google's "Streetview"? How many people are projected to live on the planet in 2050? Which state has the highest annual divorce rate?
