Precast Concrete Structures Kim S. Elliott.2019-08-08

This second edition of Precast Concrete Structures introduces the conceptual design ideas for the prefabrication of concrete structures and presents a number of worked examples that translate designs from BS 8110 to Eurocode EC2, before going into the detail of the design, manufacture, and construction of precast concrete multi-storey buildings. Detailed structural analysis of precast concrete and its use is provided and some details are presented of recent precast skeletal frames of up to forty storeys. The theory is supported by numerous worked examples to Eurocodes and European Product Standards for precast reinforced and prestressed concrete elements, composite construction, joints and connections and frame stability, together with extensive specifications for precast concrete structures. The book is extensively illustrated with over 500 photographs and line drawings.

Construction Materials Marios Soutsos, Peter

Domone.2017-10-10 This established textbook provides an understanding of materials' behaviour through knowledge of their chemical and physical structure. It covers the main classes of construction materials: metals, concrete, other ceramics (including bricks and masonry), polymers, fibre composites, bituminous materials, timber, and glass. It provides a clear and comprehensive perspective on the whole range of materials used in modern construction, to form a must-have for civil and structural engineering students, and those on courses such as architecture, surveying and construction. It begins with a Fundamentals section followed by a section on each of the major groups of materials. In this new edition: - The section on fibre composites FRP and FRC has been completely restructured and updated. - Typical questions with answers to any numerical examples are given at the end of each section, as well as an instructor's manual with further questions and answers. - The links in all parts have also been updated and extended, including links to free reports from The Concrete Centre, as well as other online resources and material suppliers' websites. - and now with solutions manual and resources for adopting instructors on <https://www.crcpress.com/9781498741101>

companion to G. D. Taylor's *Materials in Construction: Principles, Practice and Performance* - an advanced text that will develop the topics presented in this book. The coverage of a wide range of construction materials provides a comprehensive foundation to the subject, and includes an overview of performance characteristics and standards for many materials. The text also reviews material properties, and examines and evaluates modes of deterioration while emphasising preventative techniques and remedial treatment. Throughout the text carefully devised example experiments and questions support the theory and practical information. *Materials in Construction* is an essential handbook for any student studying materials as part of a construction course at BTEC NC/D, HNC/D and undergraduate level.

Composite Structures of Steel and Concrete Roger P.

Johnson.2018-08-21 This book provides an introduction to the theory and design of composite structures of steel and concrete. Material applicable to both buildings and bridges is included, with more detailed information relating to structures for buildings. Throughout, the design methods are illustrated by calculations in accordance with the Eurocode for composite structures, EN 1994, Part 1-1, 'General rules and rules for buildings' and Part 1-2, 'Structural fire design', and their cross-references to ENs 1990 to 1993. The methods are stated and explained, so that no reference to Eurocodes is needed. The use of Eurocodes has been required in the UK since 2010 for building and bridge structures that are publicly funded. Their first major revision began in 2015, with the new versions due in the early 2020s. Both authors are involved in the work on Eurocode 4. They explain the expected additions and changes, and their effect in the worked examples for a multi-storey framed structure for a building, including resistance to fire. The book will be of interest to undergraduate and postgraduate students, their lecturers and supervisors, and to practising engineers seeking familiarity with

Bray, David Easterbrook. 2006-07-12 This major handbook covers the structural use of brick and blockwork. A major feature is a series of step-by-step design examples of typical elements and buildings. The book has been revised to include updates to the code of practice BS 5628:2000-2 and the 2004 version of Part A of the Building Regulations. New information on sustainability issues, innovation in masonry, health and safety issues and technical developments has been added.

Construction Materials Peter Domone, John Illston. 2010-05-21

So far in the twenty-first century, there have been many developments in our understanding of materials' behaviour and in their technology and use. This new edition has been expanded to cover recent developments such as the use of glass as a structural material. It also now examines the contribution that material selection makes to sustainable construction practice, considering the availability of raw materials, production, recycling and reuse, which all contribute to the life cycle assessment of structures. As well as being brought up-to-date with current usage and performance standards, each section now also contains an extra chapter on recycling. Covers the following materials: metals concrete ceramics (including bricks and masonry) polymers fibre composites bituminous materials timber glass. This new edition maintains our familiar and accessible format, starting with fundamental principles and continuing with a section on each of the major groups of materials. It gives you a clear and comprehensive perspective on the whole range of materials used in modern construction. A must have for Civil and Structural engineering students, and for students of architecture, surveying or construction on courses which require an understanding of materials.

The Mechanical and Physical Properties of the British Standard
En Steels (B.S. 970 - 1955), Volume 2 focuses on the most
commonly used range of steels in the United Kingdom - B.S.970
En Steels. The publication first offers information on 3 percent
nickel steel and 3 1/2 percent nickel steel. Concerns focus on
welding, machinability, hot working and heat treatment
temperatures, physical properties, transformation characteristics,
and hardenability. The text then explores 3 percent nickel-
chromium steel, 1 1/2 percent nickel-chromium-molybdenum
steel, and 2 1/2 percent nickel-chromium-molybdenum steel
(medium carbon). The manuscript takes a look at 2 1/2 percent
nickel-chromium-molybdenum steel (high carbon) and 3 percent
nickel-chromium-molybdenum steel. Topics include welding,
machinability, hot working and heat treatment temperatures,
continuous cooling transformation, hardenability, and physical
properties. The text also ponders on 4 1/4 percent nickel-
chromium steel (with or without molybdenum), 1 percent carbon-
chromium steel, and carbon case-hardening steel. The publication
is a dependable source material for readers interested in the
mechanical and physical properties of steels.

This is followed by self-contained chapters concerning design examples of steel and steel-concrete composite bridge components as well as finite element modeling of the bridges and their components. The final chapter focuses on finite element analysis and the design of composite highway bridges with profiled steel sheeting. This volume will serve as a valuable reference source addressing the issues, problems, challenges, and questions on how to enhance the design of steel and steel-concrete composite bridges, including highway bridges with profiled steel sheeting, using finite element modeling techniques. Provides all necessary information to understand relevant terminologies and finite element modeling for steel and composite bridges Discusses new designs and materials used in highway and railway bridge Illustrates how to relate the design guidelines and finite element modeling based on internal forces and nominal stresses Explains what should be the consistent approach when developing nonlinear finite element analysis for steel and composite bridges Contains extensive case studies on combining finite element analysis with design for steel and steel-concrete composite bridges, including highway bridges with profiled steel sheeting

Design of Prestressed Concrete to Eurocode 2, Second Edition

Raymond Ian Gilbert, Neil Colin Mickleborough, Gianluca Ranzi. 2017-01-27 The design of structures in general, and prestressed concrete structures in particular, requires considerably more information than is contained in building codes. A sound understanding of structural behaviour at all stages of loading is essential. This textbook presents a detailed description and explanation of the behaviour of prestressed concrete members and structures both at service loads and at ultimate loads and, in doing so, provide a comprehensive and up-to-date guide to structural design. Much of the text is based on first principles and relies only on the principles of mechanics and the properties of concrete and steel, with numerous worked

examples. However, where the design requirements are code specific, this book refers to the provisions of Eurocode 2: Design of Concrete Structures and, where possible, the notation is the same as in Eurocode 2. A parallel volume is written to the Australian Standard for Concrete Structures AS3600-2009. The text runs from an introduction to the fundamentals to in-depth treatments of more advanced topics in modern prestressed concrete structures. It suits senior undergraduate and graduate students and also practising engineers who want comprehensive introduction to the design of prestressed concrete structures. It retains the clear and concise explanations and the easy-to-read style of the first edition, but the content has been extensively re-organised and considerably expanded and updated. New chapters cover design procedures, actions and loads; prestressing systems and construction requirements; connections and detailing; and design concepts for prestressed concrete bridges. The topic of serviceability is developed extensively throughout. All the authors have been researching and teaching the behaviour and design of prestressed concrete structures for over thirty-five years and the proposed new edition of the book reflects this wealth of experience. The work has also gained much from Professor Gilbert active and long-time involvement in the development of standards for concrete buildings and concrete bridges.

Chatzimichailidou.2020-09-29 Public safety, as well as the safety of products and services, is of paramount importance and interest to individuals, organisations and society. Safety successes are achieved every second, but we take them for granted and we do not appreciate the challenges professionals meet to make the world as safe as possible. Safety failures are less frequent but become focal points of stakeholders and the public with a tendency to blame and not comprehend the context and the hard decisions professionals have to make when balancing safety with competing goals. This edited book includes case studies from industry practitioners exactly as they experience them without relying on the understanding of researchers who conduct studies and try to map the overall situation per case based on multiple interviews, observations and questionnaires. Included are case studies from the aviation, construction, oil and gas, telecommunications, transportation, health and public safety industries. They are stories told by frontline practitioners who work to keep the public safe. In each chapter, the author, based on his/her professional experience, shares two real cases, one success and one failure, explaining the background and approach, and critically reflecting why his/her initiatives and activities worked or didn't work. They are descriptive of the case, context and tools, techniques, methods and approaches followed and include the valuable safety lesson learned.
