**Indexing and Retrieval of Non-Text Information** Diane Rasmussen Neal.2012-10-30 The scope of this volume will encompass a collection of research papers related to indexing and retrieval of online non-text information. In recent years, the Internet has seen an exponential increase in the number of documents placed online that are not in textual format. These documents appear in a variety of contexts, such as user-generated content sharing websites, social networking websites etc. and formats, including photographs, videos, recorded music, data visualizations etc. The prevalence of these contexts and data formats presents a particularly challenging task to information indexing and retrieval research due to many difficulties, such as assigning suitable semantic metadata, processing and extracting non-textual content automatically, and designing retrieval systems that speak in the native language of non-text documents.

**Society and Knowledge** Nico Stehr,Volker Meja.2011-12-31 The sociology of knowledge is generally seen as part of the sociology of cultural products. Along with the sociology of science, it explores the social character of science and in particular the social production of scientific knowledge. Knowledge in all its varieties is of crucial importance in social, political, and economic relations in modern society. Yet new realities, the editors argue in their introduction to this second edition, require a new perspective. In the past half century, the social role of knowledge has changed profoundly. The natural attitude toward scientific knowledge in science that assigned a special status to science's knowledge claims has lost its dominance, and the view that all knowledge is socially constructed has gained general acceptance. Science increasingly influences the political agenda in modern societies. Consequently, a new political field has emerged: knowledge politics. These fourteen essays by social scientists, philosophers, and historians cover fundamental issues, theoretical perspectives, knowledge and power, and empirical studies. Eight of the fourteen contributions were part of the first edition of *Society and Knowledge*, published in 1984, and most of these have been updated and revised for this new edition. Included in this edition are six new contributions by Robert K. Merton, Steve Fuller, Dick Pels, Nico Stehr, Barry Schwartz, and Michael Lynch. This second, revised edition builds on its predecessor in presenting cutting-edge theoretical and empirical efforts to transform the sociology of knowledge. Professionals, policymakers, and graduate students in the fields of sociology, political science, and social science will find this volume of interest and importance.

Indian Women in Leadership Rajashi Ghosh,Gary N. McLean.2018-10-10 This book provides intriguing insights into the development of highly qualified women leaders in diverse Indian contexts and their role at national and organizational levels. While India has made enormous economic strides in the past few decades, gender inequality and underutilization of female talent remain deeply rooted and widely spread in many parts of Indian society. This book addresses an urgent need to stop treating Indian women as under-developed human capital and begin realizing their potential as leaders of quality work. This book will fill the gap of research on international leadership for students, academics, and multinational organizations.

**Towards a New Human Being** Luce Irigaray,Mahon O'Brien,Christos Hadjioannou.2019-03-13 With my own introduction and epilogue, *Towards a New Human Being* gathers original essays by early career researchers and established academic figures in response to *To Be Born*, my most recent book. The contributors approach key issues of this book from their own scientific fields and perspectives - through calls for a different way of bringing up and educating children, the constitution of a new environmental and sociocultural milieu or the criticism of past metaphysics and the introduction of new themes into the philosophical horizon. However, all the essays which compose the volume correspond to proposals for the advent of a new human being - so answering the subtitle of *To Be Born: Genesis of a New Human Being*. *To Be Born* thus acts as a background from which each author had the opportunity to develop and think in their own way. As such *Towards a New Human Being* is part of a longer-term undertaking in which I engaged together and in dialogue with more or less confirmed thinkers with a view to giving birth to a new human being and building a new world. -Luce Irigaray

**Spatial Mobility, Migration, and Living Arrangements** Can M. Aybek,Johannes Huinink,Raya Muttarak.2014-10-29 This book brings together ten original empirical works focusing on the influence of various types of spatial mobility - be it international or national- on partnership, family and work life. The contributions cover a range of important topics which focus on understanding how spatial mobility is related to familial relationships and life course transitions. The volume offers new insights by bringing together the state of the art in theoretical and empirical approaches from spatial mobility and international migration research. This includes, for example, studies that investigate the relationships between international migration and changing patterns of partnership choice, family formation and fertility. Complementing to this, this volume presents new empirical studies on job-related residential mobility and its impact on the relationship quality of couples, family life, and union dissolution. It also highlights the importance of research that looks at the reciprocal relationships between mobility and life course events such as young adults leaving the parental home in international migration context, re-arrangements of family life after divorce and spatial mobility of the elderly following life transitions. The scholarly work included in this volume does not only contribute to theoretical debates but also provide timely empirical evidence from various societies which represent the common features in the dynamics of spatial mobility and migration.

**Bad Girls and Transgressive Women in Popular Television, Fiction, and Film** Julie Chappell,Mallory Young.2017-07-03 This collection of essays focuses on the representations of a variety of "bad girls"—women who challenge, refuse, or transgress the patriarchal limits intended to circumscribe them—in television, popular fiction, and mainstream film from the mid-twentieth century to the present. Perhaps not surprisingly, the initial introduction of women into Western cultural narrative coincides with the introduction of transgressive women. From the beginning, for good or ill, women have been depicted as insubordinate. Today's popular manifestations include such widely known figures as Lisbeth Salander (the "girl with the dragon tattoo"), The Walking Dead's Michonne, and the queen bees of teen television series. While the existence and prominence of transgressive women has continued uninterrupted, however, attitudes towards them have varied considerably. It is those attitudes that are explored in this collection. At the same time, these essays place feminist/postfeminist analysis in a larger context, entering into ongoing debates about power, equality, sexuality, and gender.

**Correspondence 1943-1955** Theodor W. Adorno,Thomas Mann.2006-12-04 In December 1945 Thomas Mann wrote a famous letter to Adorno in which he formulated the principle of montage adopted in his novel Doctor Faustus. The writer expressly invited the philosopher to consider, with me, how such a work and I mean Leverkhn's work could more or less be practically realized. Their close collaboration on questions concerning the character of the fictional composers putatively late works (Adorno produced specific sketches which are included as an appendix to the present volume) effectively laid the basis for a further exchange of letters. The ensuing correspondence between the two men documents a rare encounter of creative tension between literary tradition and aesthetic modernism which would be sustained right up until the novelists death in 1955. In the letters, Thomas Mann openly acknowledged his fascinated reading of Adorno's *Minima Moralia* and commented in detail on the *Essay on Wagner*, which he was as eager to read as the one in the *Book of Revelation* consumes a book which tastes as sweet as honey. Adorno in turn offered detailed observations upon and frequently enthusiastic commendations of Mann's later writings, such as *The Holy Sinner*, *The Betrayed One* and *The Confessions of Felix Krull*. Their correspondence also touches upon issues of great personal significance, notably the sensitive discussion of the problems of returning from exile to postwar Germany. The letters are extensively annotated and offer the reader detailed notes concerning the writings, events and personalities referred or alluded to in the correspondence.

**Financial Crises, Sovereign Risk and the Role of Institutions** Dominik Maltritz,Michael Berlemann.2014-01-17 The recent world economic crisis showed very clearly that financial crises and sovereign defaults are severe threats to economic and social prosperity. In addition, it became apparent that currency crises and banking crises often occur together and are closely related to sovereign debt crises and defaults. The present book contains new research on various important issues related to financial crises and sovereign default risk by leading experts in the field. The book discusses new modelling approaches to financial crises, defaults and their interdependencies. It also sheds light on the consequences of different sorts of crises for the trust in the institutions which are concerned with managing them. Moreover, it provides discussions of several institutional features of the EMU and the world financial system and in particular the risks inherent in these institutions. The book also includes interesting suggestions for solving crises and improving financial stability.

**Theory and Principled Methods for the Design of Metaheuristics** Yossi Borenstein,Alberto Moraglio.2013-12-19 Metaheuristics, and evolutionary algorithms in particular, are known to provide efficient, adaptable solutions for many real-world problems, but the often informal way in which they are defined and applied has led to misconceptions, and even successful applications are sometimes the outcome of trial and error. Ideally, theoretical studies should explain when and why metaheuristics work, but the challenge is huge: mathematical analysis requires significant effort

even for simple scenarios and real-life problems are usually quite complex. In this book the editors establish a bridge between theory and practice, presenting principled methods that incorporate problem knowledge in evolutionary algorithms and other metaheuristics. The book consists of 11 chapters dealing with the following topics: theoretical results that show what is not possible, an assessment of unsuccessful lines of empirical research; methods for rigorously defining the appropriate scope of problems while acknowledging the compromise between the class of problems to which a search algorithm is applied and its overall expected performance; the top-down principled design of search algorithms, in particular showing that it is possible to design algorithms that are provably good for some rigorously defined classes; and, finally, principled practice, that is reasoned and systematic approaches to setting up experiments, metaheuristic adaptation to specific problems, and setting parameters. With contributions by some of the leading researchers in this domain, this book will be of significant value to scientists, practitioners, and graduate students in the areas of evolutionary computing, metaheuristics, and computational intelligence.

**Non-equilibrium Thermodynamics and the Production of Entropy** Axel Kleidon, Ralph D. Lorenz. 2004-11-18 The present volume studies the application of concepts from non-equilibrium thermodynamics to a variety of research topics. Emphasis is on the Maximum Entropy Production (MEP) principle and applications to Geosphere-Biosphere couplings. Written by leading researchers from a wide range of backgrounds, the book presents a first coherent account of an emerging field at the interface of thermodynamics, geophysics and life sciences.

**Processionary Moths and Climate Change : An Update** Alain Roques. 2014-10-10 Because of its peculiar biology, its negative impacts on forestry, and its urticating larvae affecting human and animal health, pine processionary moth has largely been studied in many European countries during the last century. However, knowledge remained scattered and no synthesis has ever been published. Since the IPCC retained the moth as one of the two insect indicators of climate change because of its expansion with warming up, filling this gap became increasingly important. Led by INRA, this book associates 101 authors from 22 countries of Europe, Minor Asia and North Africa, combining all the concerned research fields (entomology, ecology, genetics, mathematical modelling, medical and veterinary science, pest management) in a multidisciplinary approach to understand and model the processes underlying past, present and future moth expansion and to propose adapted management methods. Besides, the major biological patterns of the related processionary species are also detailed.

**Affective Dimensions in Chemistry Education** Murat Kahveci, MaryKay Orgill. 2015-01-08 This is a unique resource for those wishing to address the affective domain as they research and solve problems in chemistry education. Contributions by world-leading experts cover both fundamental considerations and practical case studies. This work fills a gap in the literature of chemistry education, which so far has focussed mainly on the cognitive domain. The affective domain refers to feelings-based constructs such as attitudes, values, beliefs, opinions, emotions, interests, motivation, and a degree of acceptance or rejection. It can affect students' interest in science topics and their motivation to persevere in learning science concepts.

**Neuroimaging of Consciousness** Andrea Eugenio Cavanna, Andrea Nani, Hal Blumenfeld, Steven Laureys. 2013-07-20 Within the field of neuroscience, the past few decades have witnessed an exponential growth of research into the brain mechanisms underlying both normal and pathological states of consciousness in humans. The development of sophisticated imaging techniques to visualize and map brain activity in vivo has opened new avenues in our understanding of the pathological processes involved in common neuropsychiatric disorders affecting consciousness, such as epilepsy, coma, vegetative states, dissociative disorders, and dementia. This book presents the state of the art in neuroimaging exploration of the brain correlates of the alterations in consciousness across these conditions, with a particular focus on the potential applications for diagnosis and management. Although the book has a practical approach and is primarily targeted at neurologists, neuroradiologists, and psychiatrists, it will also serve as an essential reference for a wide range of researchers and health care professionals.

**Re-engineering the Uptake of ICT in Schools** Frans Van Assche, Luis Anido, David Griffiths, Cathy Lewin, Sarah McNicol. 2015-08-11 This book reports on a novel and comprehensive approach to the uptake of ICT in Schools. It focuses on key questions, pedagogically sound ways of introducing ICT, new technical artifacts supporting the approach, the evaluation in a large-scale validator, and future work. While many innovations in Technology Enhanced Learning (TEL) have emerged over the last two decades, the uptake of these innovations has not always been very successful, particularly in schools. The transition from proof of concept to integration into learning activities has been recognized as a bottleneck for quite some time. This major problem, which is affecting many TEL stakeholders, is the focus of this book which focuses on developing a more effective and efficient approach based on more than 2500 pilots in European classrooms. Teachers, head teachers, and policy makers may benefit from reading how novel learning scenarios can be elaborated, adapted to a local context, and implemented in the classroom; how new technologies can support this process for teachers and their national/regional communities; how teachers and other stakeholders can be educated in such a re-engineering process; how the approach can be scaled up through MOOCs, ambassador schemes, and train-the-trainer programs; how future classroom labs can inspire teachers, head teachers, and policy makers; how teachers and, above all, learners can become more engaged in learning through the adoption of the iTEC approach. Readers with a more technical focus may also be interested in the discussion of recommender systems, the flexible provision of resources and services, the deployment of the cloud in schools, and systems for composing technological support for lesson plans.

**International Perspectives on Teaching and Learning with GIS in Secondary Schools** Andrew J. Milson, Ali Demirci, Joseph J. Kerski. 2014-11-28 This, the first publication to collate a broad international perspective on the pedagogical value of GIS technology in classrooms, offers an unprecedented range of expert views on the subject. Geographic Information Systems (GISs) are now ubiquitous and relatively inexpensive. They have revolutionized the way people explore and understand the world around them. The capability they confer allows us to capture, manage, analyze, and display geographic data in ways that were undreamt of a generation ago. GIS has enabled users to make decisions and solve problems as diverse as designing bus routes, locating new businesses, responding to emergencies, and researching climate change. GIS is also having a major impact in the classroom. Students and teachers around the world are using this significant emerging technology in the secondary school classroom to study social and scientific concepts and processes, to broaden their technical skills, and to engage in problem solving and decision making about local and global issues. *International Perspectives on Teaching and Learning with GIS in Secondary Schools* brings together authors from 34 countries who profile the current status of GIS in secondary school teaching and learning in their country. Each chapter includes a summary of the country's educational context, a case study illustrating how GIS is used in secondary schooling, and an assessment of the opportunities and challenges in teaching and learning with GIS now and in the future. The book demonstrates that GIS is not only a technological tool to be used in the classroom, but also a catalyst for motivation, encouragement, and cooperation in understanding and solving global problems. The most up to date and extensive survey of GIS in the secondary education landscape, covering both principles and practice. Professor David Maguire, Pro-Vice-Chancellor, Birmingham City University, UK *International Perspectives on Teaching and Learning With GIS in Secondary Schools* is a highly relevant, critically important, reflective contribution to the literature, providing strong arguments supporting the inclusion for spatial studies for all in secondary school education. Karl Donert, President, EUROGEO This is an invaluable and inspirational examination of innovation in geospatial technologies in secondary schools around the world. Each chapter contains practical models for how to integrate powerful tools for spatial analysis into a range of subjects. It will be useful to classroom teachers and administrators seeking pathways to implementation and teacher educators considering how to prepare the next generation to use geospatial technologies. Sarah Witham Bednarz, Department of Geography, Texas A&M University, College Station, TX, USA
