Mastering Excel Through Projects Hong Zhou.2022 Master Excel in less than two weeks with this unique project-based book! Let's face it, we all master skills in our own way, but building a soup-to-nuts project is one of the best ways to make learning stick and get up to speed quickly. Whether you are just getting started with Excel or are an experienced user, this book will elevate your knowledge and skills. For a beginner, the micro examples in each chapter will warm you up before you dive into the projects. For experienced users, the projects, especially those with table setup considerations, will help you become more creative in your interactions with Excel. Readers will benefit from building eight unique projects, each covering a different topic, including a word game, a food nutrition ranking, a payroll (tax withholding) calculation, an encryption, a two-way table, a Kaplan-Meier analysis, a data analysis via a pivot table and the K-means Clustering data mining method. Through these projects, you will experience firsthand how Excel skills are organized together to accomplish tasks that sound complex and daunting when first described. Get started with a word game which asks users to find English words that amount to exactly 100 points, with each letter of the alphabet assigned a point 1, 2, 3, ... 26, respectively. You will disassemble a word into letters and then sum up their points, and then take it one step further, contemplating how to make the completed Excel worksheet more user friendly and completely automated. Increasingly challenging tasks like this example build on what you have learned and increase your confidence along the way, ensuring your mastery of Excel. What You Will Learn Gain confidence to tackle a challenging Excel-related mission, even those that seem impossible Become skilled in the creative uses of Excel formulas and functions and other built-in features Appreciate the art of refining worksheets to maximize automation Understand the value of treating each worksheet as a unique product This book is for people who are interested in learning Excel as quickly and efficiently as possible. While Excel beginners and intermediate users are the primary audience, experienced Excel users might also discover new skills and ways of working with Excel. Hong Zhou is a professor of computer science and mathematics at the University of Saint Joseph in Connecticut. Before returning to school for his doctoral degree, Dr. Zhou worked as a Java developer in Silicon Valley. Since 2004, Dr. Zhou has been teaching various courses in computer science, data science, mathematics, statistics, and informatics. His major research interests include data mining, bioinformatics, software agents, and blockchain. Dr. Zhou became interested in Excel through teaching computer skills and using them for research purposes; for example, applying Excel in teaching data mining, encryption, and health informatics. He also enjoys applying his Excel skills to help colleagues in their research projects.

Compensation Management Er Soni Shyam Singh.2007 Because of pressure of changing business scenario and the need to develop competitive edge, companies are trying to attract and retain talent but competition for talent is also rising. Creating, maintaining and retaining have become a core strategy of every organization. Compensation being the most sensitive area of HRM, has been recognized as a core element of HR policy to build a corporate culture of employees commitments. The concept of wage and salary is also changing with the increased awareness of the employees and their changing aspirations or expectations. Perhaps, this may be the reason some of the universities have included Compensation as a separate paper in their MBA curriculum. This book is designed based on the course design of UGC but is unlike voluminous textbooks. It tries to clear the concepts of management students and practicing HR managers, enable them to understand relevant terminologies and their co-relevance to design and structure a sound compensation structure, evaluate and benchmark the jobs and tools of compensation management. It provides comprehensive yet to the point approaches to learn differentiations and tips to design the compensation for employees at various levels of the organization. Four parts of the book cover understanding and conceptualizing the compensation and compensation management, knowing various economic theories and factors affecting compensation designs. Deciding the job worth or evaluation of jobs, wage & salary administration-principles and practices, designing compensation structures and it's components, understanding the machineries involved in deciding or controlling compensation and the legal protection enacting to protect the interest of the employees. It also suggests ways to improve earning and employee s satisfaction and improving the performance to justify the higher hiring cost. It is so designed that the reader can update the contents at any moment of time and even the practicing managers may keep this as a ready reference.
