Short-and Long-term Memory in Infancy and Early Childhood Lisa M. Oakes,Patricia J. Bauer.2007 Despite early speculations that young infants are unable to form memories, since the 1950s developmental scientists have documented amazing memory abilities in infancy and explored how these abilities develop. This research on memory development in infancy and early childhood has recently moved in exciting new directions. Extensions of work on memory systems in adults and the use of behavioral and neuroscience methods to study early developing memory abilities have lead to an explosion of ideas about the neural underpinnings of memory, its development, and the mechanisms involved in these developmental changes. This book focuses on recent empirical and theoretical advances in the study of memory development in infancy and early childhood and on mechanisms of developmental change. Its chapters allow readers to compare and contrast contemporary views of memory development, and gain an understanding of what we do and do not yet know about how memory develops in early childhood.

Creating Child-centered Programs for Infants and Toddlers Eleanor Stokes Szanton.1997 In child-centered education programs, children construct their own knowledge from their experiences and interactions with the world around them, and caregivers foster children's growth and development by building on children's interests, needs, and strengths within a safe and caring environment. The Step by Step educational program developed a series of child-centered teaching manuals for caregivers and teachers in early childhood programs in Central and Eastern Europe. The series was initially intended for preschool but has been extended to include children from birth to age 10. This manual offers caregivers (birth to age 3) practical advice on how to: (1) support infants' and toddlers' emotional, social, cognitive, language, and physical development; (2) recognize and respond to each child's temperament and interests; (3) create an environment that is safe, healthy, and stimulating; and (4) work with families and other professionals to ensure a quality program. The manual's contents are: (1) Part 1: Introduction, includes program rationale and philosophy; (2) Part 2: The Research Base for the Methodology, includes infant and toddler development; (3) Part 3: How Infants and Toddlers Learn, includes supporting emotional development; guiding social development; guiding cognitive development; guiding early language development; guiding physical development; using daily routines as learning experiences; observing, recording, and reporting on children's development; and families and caregivers together supporting infants and toddlers; (4) Part 4: The Environment for Learning, includes ensuring a healthy environment, ensuring a safe environment, promoting good nutrition, and physical space: designing responsive environments for infants and toddlers; and (5) Part 5: Program Staffing and Evaluation. Contains approximately 120 references. (EV)

Moving with Pleasure from the Beginning Agnes Szanto-Feder.2020-05-04 It's not many children who have had the privilege to say that he or she was a true Pikler baby. But Ágnes Szántó-Féder, was not only such a child, but also one who had an ongoing relationship - working and otherwise - with the celebrated pediatrician, Dr. Emmi Pikler (1902-1984). Indeed, Ágnes had been so profoundly affected by the woman who revolutionized infant and early childhood care that she, too, devoted her life's work to the philosophy known as the Pikler® Pedagogical Approach. This book will allow the reader to see infants and young children through a lens of competence. Because of this singular approach, youngsters are not coerced or forced to be - or to become - anyone other than who they truly are. This, in a nutshell, is the core Piklerian philosophy, something that is so very simple yet also undeniably deep. Ágnes's acute observational skills guide the reader to understand at a much greater level, what freedom and autonomy actually means for an infant. One of the author's answers lies in the power of "balance; balance (in physical sense) of the infant in their self-initiated gross motor development, and balance in their caring and nurturing relationship with the adult who cares for them." This jewel of a book should be required reading for any parent, policy maker, early childcare professional or any such person advocating for the health of young children around the world... Child Development 0-3 Years Robin Harvey.1996

The Magic Years Selma Fraiberg.1959 Abstract: Research and knowledge about infant and child ego development are synthesized into a child rearing guide for parents. Development is dealt with in 3 stages: the first 18 months, 18 months to 3 years, and 3 to 6 years. Personality development is outlined and then practical problems are discussed for each stage. Parents are better able to help and discipline, when they approach problems with an understanding of the anxieties and mental coping tools that children have at different stages. Feeding, separation anxiety, bowel training, self-control, sexual awareness, and value development are discussed.
