Aging and Aging-Related Diseases Zhao Wang.2018-09-19 This book provides an overview of recent advances in the study of aging and aging related diseases, discussing the topics at individual, organ, tissue, cell, and molecular levels. It also presents studies on the biomarkers of aging and anti-aging interventions. Aging has been becoming a global health problem. However it was not possible to determine aging as we usually diagnose a disease because there are few biomarkers for age estimation. Since ancient times, people have been seeking anti-aging substances and methods for achieving immortality, while the scientific study of aging has only existed for 100 years. This book appeals to researchers both in institutes and in pharmaceutical companies interested in further studies in this field.

Techniques in Free Radical Research A.T. Diplock,M.C.R. Symons,C.A. Rice-Evans.1991-12-11 Free radical species are generally short-lived due to their high reactivity and thus direct measurement and identification are often impossible. ESR is the only technique which has the potential for direct detection of radicals but in biological systems even these must be trapped by a spin-trapping agent. Thus most investigations involve recognition of indicators of the presence of radicals in vivo or FOOTPRINTS of radical-mediated damage. Techniques in Free Radical Research assembles and critically assesses the most relevant and reliable experimental approaches used towards the measurement of radicals and radical-mediated damage in chemical systems, in cells and in tissues under the following six headings: a) Footprints of DNA damage, b) Footprints of protein damage, c) Footprints of lipid peroxidation, d) Footprints of antioxidant consumption, e) Footprints via indirect radical assays, and f) Footprints via the availability of transition metal complexes.

Health and Lifestyle Change Rebecca Huss-Ashmore,Joan Schall,Mary Hediger.1992-06-29 The health impacts of changing behavior and lifestyle in a range of prehistoric, historic, and extant populations are examined in this volume. Of particular interest to the authors is the identification of issues that link past and present, and the ability of research on disease in the past to shed light on modern health problems. Control of the Cardiovascular and Respiratory Systems in Health and Disease C. Tissa Kappagoda,Marc P. Kaufman.2012-12-06 On April 8-9, 1994, a symposium entitled Control of the Cardiovascular and Respiratory Systems in Health and Disease was held at the University of California Davis Medical Center in Sacramento. The purpose of this symposium was to honor the careers of Professors Hazel M. and John C. G. Coleridge. Participants in this symposium came from throughout the world. Their attendance at the symposium was a symbol of great respect and affection for the honorees. The Professors Coleridge have made many important contributions to the scientific literature concerning neural control of the cardiovascular and respiratory systems. In addition, they have made remarkable contributions to the lives of other scientists working in this field of investigation. Some of us have known them as mentors, counselors, friends, and supervisors; others have known them as co-investigators. Most importantly, all of us have known them as friends. This book, which contains the proceedings of the symposium, is dedicated to Hazel and John Coleridge. C. T. Kappagoda M. P. Somatotyping J. E. Lindsay Carter, Barbara Honeyman Heath.1990-06-28 Somatotyping is a method of description and assessment of the body on three shape and composition scales: endomorphy (relative fatness), mesomorphy (relative musculoskeletal robustness), and ectomorphy (relative linearity). This book (the first major account of the field for thirty years) presents a comprehensive history of somatotyping, beginning with W. J. Sheldon's introduction of the method in 1940. The controversies regarding the validity of Sheldon's method are described, as are the various attempts to modify the technique, particularly the Heath-Carter method, which has come into widespread use. The book reviews present knowledge of somatypes around the world, how they change with growth, ageing and exercise, and the contributions of genetics and environment to the rating. Also reviewed are the relationships between somatypes and sport, physical performance, health and behaviour. Students and research workers in human biology, physical and biological anthropology and physical education will all find valuable information in this book.

Arctic Mirrors Yuri Slezkine.2016-11-01 For over five hundred years the Russians wondered what kind of people their Arctic and sub-Arctic subjects were. They have mouths between their shoulders and eyes in their chests, reported a fifteenth-century tale. They rove around, live of their own free will, and beat the Russian people, complained a seventeenth-century Cossack. Their actions are exceedingly rude. They do not take off their hats and do not bow to each other, huffed an eighteenth-century scholar. They are children of nature and guardians of ecological balance, rhapsodized early nineteenth-century and late twentieth-century romantics. Even the Bolsheviks, who categorized the circumpolar foragers as authentic proletarians, were repeatedly puzzled by the peoples from the late Neolithic period who, by virtue of their extreme backwardness, cannot keep up either economically or culturally with the furious speed of the emerging socialist society. Whether described as brutes, aliens, or endangered indigenous populations, the so-called small peoples of the north have consistently remained a point of contrast for speculations on Russian identity and a convenient testing ground for policies and images that grew out of these speculations. In *Arctic Mirrors*, a vividly rendered history of circumpolar peoples in the Russian empire and the Russian mind, Yuri Slezkine offers the first in-depth interpretation of this relationship. No other book in any language links the history of a colonized non-Russian people to the full sweep of Russian intellectual and cultural history. Enhancing his account with vintage prints and photographs, Slezkine reenacts the procession of Russian fur traders, missionaries, tsarist bureaucrats, radical intellectuals, professional ethnographers, and commissars who struggled to reform and conceptualize this most alien of their subject populations. Slezkine reconstructs from a vast range of sources the successive official policies and prevailing attitudes toward the northern peoples, interweaving the resonant narratives of Russian and indigenous contemporaries with the extravagant images of popular Russian fiction. As he examines the many ironies and ambivalences involved in successive Russian attempts to overcome northern—and hence their own—otherness, Slezkine explores the wider issues of ethnic identity, cultural change, nationalist rhetoric, and not-so European colonialism.

Respiratory Health Mieczyslaw Pokorski.2015-07-29 The tracheobronchial tree is open to the environment surrounding the body. Respiration has thus the essential bearing on general morbidity, vulnerability to disease and immunity. Further, respiratory function shapes the neuropsychological responses to succumbing to disease, controls the mind-to-body interaction and sets the perception of quality of life. The chapters of this book deal with the preventable drivers of poor respiratory health, the role of health information technology, the improvement in health care delivery and the integration of respiratory health and behavioral health services. Innovative strategies to promote prevention, care coordination and care integration as well as to align disease acceptance and quality of life measures also are tackled. Maintaining respiratory health is of rising research interest as a way of preventing a disease or a non pharmacological therapeutic succor. The book will be of interest to clinicians, family practitioners and medical researchers.

Chronobiology and Obesity Marta Garaulet, Jose M. Ordovás. 2012-11-13 Circadian rhythms are such an innate part of our lives that we rarely pause to speculate why they even exist. Some studies have suggested that the disruption of the circadian system may be causal for obesity and manifestations of Metabolic Syndrome (MetS). Shift-work, sleep-deprivation and bright-light-exposure at night are related to increased adiposity (obesity) and prevalence of MetS. It has been provided evidence of clock genes expression in human adipose tissue and demonstrated its association with different components of the MetS. Moreover, current studies are illustrating the particular role of different clock genes variants and their predicted haplotypes in MetS. The purpose of "Chronobiology and Obesity" is to describe the mechanisms implicated in the interaction between chonodisruption and metabolic-related illnesses, such as obesity and MetS, with different approaches.

Variability in Human Fertility Lyliane Rosetta, C. G. Nicholas Mascie-Taylor. 1996-08-28 It is widely believed that reproductive cycles are very similar between human females. However, there are in fact considerable variations both between individuals and within the reproductive life of any given individual. 'Normal' reproductive cycles cover a wide range of eventualities, and the likelihood of successful monthly egg release and ensuing pregnancy can be modified by a large number of factors. In this book, the variability of human fertility is examined by first looking at the physiological processes regulating reproduction, and the roles of metabolic adaptation and metabolic load. Inter-population variation in normal ovarian function is then discussed, covering the

importance of factors such as age, disease and breastfeeding in modifying ovarian function. First published in 1996, this is an important book for all those interested in human fertility.

Analysis of Repeated Measures Martin J. Crowder, David J. Hand. 1990-05-01 Repeated measures data arise when the same characteristic is measured on each case or subject at several times or under several conditions. There is a multitude of techniques available for analysing such data and in the past this has led to some confusion. This book describes the whole spectrum of approaches, beginning with very simple and crude methods, working through intermediate techniques commonly used by consultant statisticians, and concluding with more recent and advanced methods. Those covered include multiple testing, response feature analysis, univariate analysis of variance approaches, multivariate analysis of variance approaches, regression models, two-stage line models, approaches to categorical data and techniques for analysing crossover designs. The theory is illustrated with examples, using real data brought to the authors during their work as statistical consultants.

Iraq International Monetary Fund. 2004-10-18 This paper reviews Iraq's Request for Emergency Post-Conflict Assistance (EPCA). The authorities' main goals under the EPCA-supported program are to improve the general welfare of the Iraqi people and address Iraq's external debt problem. The authorities' program is to be underpinned by a prudent fiscal policy that aims to limit spending to available government revenues and external resources, the use of the exchange rate to anchor inflation expectations, and the planning and undertaking of key structural reforms to transform Iraq into a market economy.

Sedentary Behaviour Epidemiology Michael F. Leitzmann, Carmen Jochem, Daniela Schmid. 2024-03-14 This book addresses the origins, determinants and magnitude of the global problem of sedentary behaviour, along with concise yet in-depth solutions for tackling it. As a consequence of major technological advances in modern society, many people find themselves in environments characterized by prolonged sedentary behaviour. Building on the contributions of leading experts in the field, the new edition of this book presents updated knowledge about sedentary behaviour, its medical and public health significance, its correlates and determinants, measurement techniques, and recommendations for addressing this behaviour at the individual, community, environmental, and policy level. The book encompasses current research linking the COVID-19 pandemic to increased levels of sedentary behavior, and it covers global and planetary health aspects of sedentary behavior, highlighting sustainable development goals such as health and well-being for all. Applying a cross-disciplinary methodology, the book avoids considering physical activity and sedentary behavior as a single continuum, which potentially hampers progress in confronting widespread levels of sedentariness. Rather, the book helps readers better understand how sedentary and physically active behavior co-occur and how the two behaviours have distinct contributing factors. Building on the contributions of distinguished international experts in the field, this thorough resource is a valuable asset and challenges professionals, researchers, students, and practitioners alike to adopt new strategies and expand their reach.

Science and Application of High-Intensity Interval Training Laursen, Paul, Buchheit, Martin. 2019 The popularity of high-intensity interval training (HIIT), which consists primarily of repeated bursts of high-intensity exercise, continues to soar because its effectiveness and efficiency have been proven in use by both elite athletes and general fitness enthusiasts. Surprisingly, few resources have attempted to explain both the science behind the HIIT movement and its sport-specific application to

athlete training. That's why *Science and Application of High-Intensity Interval Training* is a must-have resource for sport coaches, strength and conditioning professionals, personal trainers, and exercise physiologists, as well as for researchers and sport scientists who study high-intensity interval training.

Supercentenarians Heiner Maier, Jutta Gampe, Bernard Jeune, James W. Vaupel, Jean-Marie Robine. 2010-05-17 Does human mortality after age 110 continue to rise, level off, or start to decline? This book describes a concerted, international research effort undertaken with the goal of establishing a database that allows the best possible description of the mortality trajectory beyond the age of 110. The International Database on Longevity (IDL) is the result of this ongoing effort. The IDL contains exhaustive information on validated cases of supercentenarians (people 110 years and older) and allows unbiased estimates of mortality after age 110. The main finding is remarkable: human mortality after age 110 is flat at a probability of death of 50% per year. The sixteen chapters of this book discuss age validation of exceptional longevity, data on supercentenarians in a series of countries, structure and contents of the IDL, and statistical analysis of human mortality after age 110. Several chapters include short accounts of specific supercentenarians that add life to demographic research.

Paediatric Exercise Physiology Neil Armstrong. 2007-01-01 Children are not mini-adults. They are growing and maturing at their own individual rates and their physiological responses to exercise are dependent on a large number of variables as they progress through childhood and adolescence into adult life. Understanding has been limited by the fact that measurement techniques and equipment developed for use with adults are often not appropriate or even ethical for use with young people. These issues are addressed in this book which provides an analysis of physiological responses to exercise in relation to age, growth, maturation and sex. Structured in an easy, accessible way for students and lecturers Well referenced, including a further reading list with each chapter Numerous standard textbook elements, including learning objectives, key points and an extensive glossary of terms and commonly used abbreviations The editor and contributors are all active researchers in paediatric exercise physiology with experience of teaching modules in this area

Tourism and the Night Andrew Smith, Adam Eldridge. 2021-05-18 Over recent decades, municipal authorities have promoted their cities as places boasting desirable night-time activities. Light festivals, museum lates, nightclubbing, and night markets extend the typical tourist experience into the night and have become a key part of the way some cities are branded. This anthology draws together research addressing the relationship between tourism and the night, facilitating a better understanding of nocturnal city destinations. *Tourism and the Night: Rethinking Nocturnal Destinations* covers an array of different tourist activities taking place at night and a range of European cities. The challenges facing late-night workers, the relationship between tourists and residents, and the effects of local policies on the expansion of late-night entertainment are examined in the first part of the book. The latter part focuses on the significance of night-time events, addressing the rising popularity of light art festivals and established religious rituals. Ultimately, this ground-breaking collection of papers examines how the night has become an important setting for city tourism. This trend means there is a need to rethink the management of urban districts and destinations, but there are also important implications for our understanding and experiences of the urban night. The chapters in this book were originally published as a special issue in the *Journal of Policy Research in Tourism, Leisure and Events*.

Sports Performance and Health Matej Supej, Jörg Spörri. 2021-08-30 Sports performance is primarily associated with elite sport, however, recreational athletes are increasingly attempting to emulate elite athletes. Performance optimization is distinctly multidisciplinary. Optimized training concepts and the use of state-of-the-art technologies are crucial for improving performance. However, sports performance enhancement is in constant conflict with the protection of athletes' health.

Notwithstanding the known positive effects of physical activity on health, the prevention and management of sports injuries remain major challenges to be addressed. Accordingly, this Special Issue on Sports Performance and Health consists of 17 original research papers, one review paper, and one commentary, and covers a wide range of topics related to fatigue, movement asymmetries, optimization of sports performance by training, technique, and/or tactics enhancements, prevention and management of sports injuries, optimization of sports equipment to increase performance and/or decrease the risk of injury, and innovations for sports performance, health, and load monitoring. As this Special Issue offers several new insights and multidisciplinary perspectives on sports performance and health, readers from around the world who work in these areas are expected to benefit from this Special Issue collection.

Energy Metabolism in Animals and Man Sir Kenneth Lyon Blaxter. 1989-06-29 Abstract: This book discusses the factors which affect the heat produced by animals and man and the ways in which the energy of the organic components of their diets are used to support growth and reproduction. The general thermodynamic principles are considered in addition to the physical principles related to heat loss by radiation, convection, conduction and evaporation of water. Major parts of the book deal with the minimal or basal production of heat, with the heat produced during muscular work and as a result of physiological reactions to the climatic environment. The text is intended for undergraduates and postgraduates who are studying energy metabolism in the context of zoology, agriculture, ecology, or medicine.
