Sky Hawk Gerit L. Fenega. 2014-03-13 This book is a firsthand account of the Vietnam conflict as it unfolded before a midlevel-career military officer. In a first-person account, it does not portend to be a microcosm of that war but, rather, what it was like for one year, at one place to participate and ultimately lead an attack squadron in combat. This an upbeat, anecdote-filled, historically accurate but nonscholarly tale of events seen or taken part in by the author. The book aims for a wide audience that likes aviation, adventure, and insight into leadership. It forcefully brings home the lessons we as a country should learn from such turmoil. This is no memoir to justify the action or inaction of a midlevel manager, but a month-by-month account of controlled mayhem and high humor among professionals in the maelstrom of battle.

OFDM for Underwater Acoustic Communications Sheng Zhou, Zhaohui Wang. 2014-03-21 A blend of introductory material and advanced signal processing and communication techniques, of critical importance to underwater system and network development This book, which is the first to describe the processing techniques central to underwater OFDM, is arranged into four distinct sections: First, it describes the characteristics of underwater acoustic channels, and stresses the difference from wireless radio channels. Then it goes over the basics of OFDM and channel coding. The second part starts with an overview of the OFDM receiver, and develops various modules for the receiver design in systems with single or multiple transmitters. This is the main body of the book. Extensive experimental data sets are used to verify the receiver performance. In the third part, the authors discuss applications of the OFDM receiver in i) deep water channels, which may contain very long separated multipath clusters, ii) interference-rich environments, where an unintentional interference such as Sonar will be present, and iii) a network with multiple users where both non-cooperative and cooperative underwater communications are developed. Lastly, it describes the development of a positioning system with OFDM waveforms, and the progress on the OFDM modem development. Closely related industries include the development and manufacturing of autonomous underwater vehicles (AUVs) and scientific sensory equipment. AUVs and sensors in the future could integrate modems, based on the OFDM technology described in this book. Asteroseismology Pere L. Pallé,César Esteban.2014-01-13 Our understanding of stars has grown significantly due to recent advances in asteroseismology, the stellar analog of helioseismology, the study of the Sun's acoustic wave oscillations. Using ground-based and satellite observatories to measure the frequency spectra of starlight, researchers are able to probe beneath a star's surface and map its interior structure. This volume provides a wide-ranging and up-to-date overview of the theoretical, experimental and analytical tools for carrying out front-line research in stellar physics using asteroseismological observations, tools and inferences. Chapters from seven eminent scientists in residence at the twenty-second Canary Islands Winter School of Astrophysics examine the interior of our Sun relative to data collected from distant stars, how to measure the fundamental parameters of single field stars, diffusion processes, and the effects of rotation on stellar structures. The volume also provides detailed treatments of modeling and computing programs, providing astronomers and graduate students a practical, methods-based guide.

Statistical Methods in Biology S.J. Welham,S.A. Gezan,S.J. Clark,A. Mead.2014-08-22 Written in simple language with relevant examples, *Statistical Methods in Biology: Design and Analysis of Experiments and Regression* is a practical and illustrative guide to the design of experiments and data analysis in the biological and agricultural sciences. The book presents statistical ideas in the context of biological and agricultural sciences to which they are being applied, drawing on relevant examples from the authors' experience. Taking a practical and intuitive approach, the book only uses mathematical formulae to formalize the methods where necessary and appropriate. The text features extended discussions of examples that include real data sets arising from research. The authors analyze data in detail to illustrate the use of basic formulae for simple examples while using the GenStat® statistical package for more complex examples. Each chapter offers instructions on how to obtain the example analyses in GenStat and R. By the time you reach the end of the book (and online material) you will have gained: A clear appreciation of the importance of a statistical approach to the design of your experiments, A sound understanding of the statistical methods used to analyse data obtained from designed experiments and of the regression approaches used to construct simple models to describe the observed response as a function of explanatory variables, Sufficient knowledge of how to use one or more statistical packages to analyse data using the approaches described, and most importantly, An appreciation of how to interpret the results of these statistical analyses in the context of the biological or agricultural science within which you are working. The book concludes with a guide to practical design and data analysis. It gives you the understanding to better interact with consultant statisticians and to identify statistical approaches to add value to your scientific research.

Low-Power Galileo/GPS Single-Shot Receiver Architecture for Mobile Terminals Christoph Kandziora.2014-12-30 Der Inhalt dieses Buches gibt die Ergebnisse der Arbeit im Rahmen meiner Dissertation wieder. Zum ersten Mal wurde im Rahmen der vorliegenden Forschungsarbeit die Funktionalität eines GNSS-Empfängers mit der Information eines Zeitsignals kombiniert. Die vorliegende Arbeit verwendet dazu die

Eigenheiten des DCF77-Signals um eine hocheffiziente kombinierte Signalverarbeitung zu ermöglichen. Die Kombination von Zeitsynchronisations- und Navigationssignalen eliminiert den größten Nachteil klassischer Assisted-Empfängerarchitekturen, den massiven Einsatz von Rechenleistung in der digitalen Signalverarbeitung. Trotzdem bleiben die Vorteile der bekannten Architekturen, eine kurze Time-to-First-Fix bei geringem Stromverbrauch erhalten. Aufbauend auf der bekannten Architektur des Single-Shot-Empfängers erlaubt die Erweiterung um die Zeitinformation zusammen mit der bereits bekannten Navigationsnachricht und der geschätzten Position eine Vorausberechnung der zu erwartenden Satellitensignale. Die Vorausberechnung der Satellitensignale resultiert in einer Reduktion des Suchfensters für die Kodephase der Satellitensignale. Neben einer Beschreibung der Grundlagen der Satellitennavigation und der Übertragung von Zeitsignalen über Langwelle, werden in diesem Buch die entwickelte Architektur vorgestellt. Außerdem sind die Ergebnisse einer komplexen Systemsimulation, Teil dieses Buches.

Readings in Artificial Intelligence and Databases John Mylopoulos, Michael L. Brodie. 2014-06-28 The interaction of database and AI technologies is crucial to such applications as data mining, active databases, and knowledge-based expert systems. This volume collects the primary readings on the interactions, actual and potential, between these two fields. The editors have chosen articles to balance significant early research and the best and most comprehensive articles from the 1980s. An in-depth introduction discusses basic research motivations, giving a survey of the history, concepts, and terminology of the interaction. Major themes, approaches and results, open issues and future directions are all discussed, including the results of a major survey conducted by the editors of current work in industry and research labs. Thirteen sections follow, each with a short introduction. Topics examined include semantic data models with emphasis on conceptual modeling techniques for databases and information systems and the integration of data model concepts in high-level data languages, definition and maintenance of integrity constraints in databases and knowledge bases, natural language front ends, object-oriented database management systems, implementation issues such as concurrency control and error recovery, and representation of time and knowledge incompleteness from the viewpoints of databases, logic programming, and AI.

The Experiment at Philadelphia Kurt B. Bakley. 2016-08-29 The Experiment at Philadelphia Did Einstein discover God? If God created all things, then who Created God? What Was and Happened Before the Big-Bang. The Philadelphia Experiment was Einsteins experiment in which he had not only discovered, in 1943, the way to make things invisible and transport them at great speeds but also positively proven scientifically, physically, and spiritually that the Almighty God exists! He had literally discovered God! That question, is there a god? Thats been going through peoples minds for so long, was discussed on the street corner, talked about on the porch on a hot summers night, and is now a proven fact. Yes, there is a god! Did Einstein in the Philadelphia Experiment make contact with UFO beings, who gave him advance knowledge of all things, which Einstein later destroyed, fearing what the world would do with that knowledge? Are the first fourteen chapters of this book about the advance knowledge Einstein received? Does it reveal the deepest, darkest secrets of God and Satan and how the universe works? Does it answer these questions? Many have asked since the beginning of the world: Which is known as the mystery of God? Why am I here? Whats the true meaning of life? How was everything created? Who are God and the devil? If God created all, who created God? If he is the first in creation, where and how did he come into existence? Why does God allow evil in the world? Why do good things happen to bad people and bad things to good people? Why if we all came from Adam and Eve, who were Jewish are there Gentiles? Are Gentiles children of devils? Is that why the Jews are Gods chosen race? Why in the Garden of Eden was the knowledge of good on the tree forbidden? How old is the earth? Why is God known as the Trinity? Why have religions, down through the ages, done such evil? What, when, and how did the big bang start? What happened to Satan? Who is he really, and what did he do in the past? What are his beliefs and ways? What is he and God literally made of? What is the meaning of the great pyramids and the sphinx? Is there scientific proof that God exists? Read this whole book for the answers to all these tough questions, and be sure to read the introduction first before reading the rest of this book. It will help you better understand this whole book.

Astronomy in the Near-Infrared - Observing Strategies and Data Reduction Techniques Jochen Heidt. 2022-07-04 Near-infrared astronomy has become one of the most rapidly developing branches in modern astrophysics. Innovative observing techniques, near-infrared detectors with quantum efficiencies in excess of 90%, highly specialised instruments as well as advanced data reduction techniques have allowed major breakthroughs in various areas like exoplanets, star-forming regions, the supermassive black hole in the Galactic center, and the high-redshift Universe. In this book, the reader will be introduced to the basic concepts of how to prepare near-infrared observations with maximized scientific return. Equal weight is given to all aspects of the data reduction for both - imaging and spectroscopy. Information is also provided on the state of the art instrumentation available and planned, on detector technology or the physics of the atmosphere, all of which influence the preparation and execution of observations and data reduction techniques. The beginner but also the expert will find a lot of information in compact form which is otherwise widely dispersed across the internet or other sources.

Food Safety and Quality-Based Shelf Life of Perishable Foods Peter J. Taormina, Margaret D. Hardin. 2021 This book addresses the shelf life of foods, a key factor in determining how food is distributed and consequently where and when different food products are available for consumption. Shelf life is determined by several factors, including microbiological, chemical, physical, and organoleptic deterioration. Often these factors are interrelated and interdependent. The editors of this volume focus specifically on the microbial factors related to shelf life of perishable foods and food commodities. This allows for more detailed coverage of foodborne bacterial pathogens and spoilage microorganisms of concern. The initial part of the book covers the why and how of shelf life determination as well as the specific microbial pathogens and spoilage microorganisms of concern for perishable foods. Contributors address topics such as the techniques utilized for determination of shelf life, the frequency of shelf life testing for different products, the interpretation of data to make shelf life determinations, and management of shelf life of food products from the perspective of the food producer, distributor, retailer, and regulator. Three key areas impacting shelf life are addressed in detail: sanitation, processing, and packaging. The sanitation chapter explains the necessary components of cleaning and sanitizing to assure a hygienic processing environment and why that is critical to shelf life control. Traditional processing procedures are reviewed and advanced processing technologies are explored. Materials used in food packaging and the utilization of traditional and activated food packaging by product type are covered in detail. The latter two chapters of the book delve into newer techniques of analysis and explore the microbiome of food products. Implications of microbial ecology and microbial quantification in food products are discussed in chapters on genomics and in the changing dogma of meat shelf life. The primary audience for this work includes food industry quality and food safety technicians, managers, directors, and executives

End of Days 2014 to 2018, New World Order by 2045 Steve Canada.2014-01-17 Crop Circles hold the key to the notification system communicated to us by our genetic creators, the Anunnaki of Nibiru, 10th planet of the solar system (see 2 NASA press releases of 1987) ... telling of their return (armed with at least 2 ancient weapons of theirs depicted in crop circles and known in the ancient world) and identifying all 12 of their names, members of the ancient Ruling Council known by the Sumerians, the first human civilization. End of Days and New World Order Anunnaki of Nibiru are scheduled to descend in worldwide mass landings on the date discovered by the author encoded in the Torah, after which their extermination program begins, replacing humans with grey-human hybrids (terms encoded in the Torah), to stop humans from ruining the Earth's capacity to support life, to prevent the destruction of the Anunnakis Eridu, their Home in the Faraway. Revealed here are secrets hidden in sacred text for over 3400 years, secrets uncovered by the author and published here for the first time.

Multistate Analysis of Life Histories with R Frans Willekens.2014-09-11 This book provides an introduction to multistate event history analysis. It is an extension of survival analysis, in which a single terminal event (endpoint) is considered and the time-to-event is studied. Multistate models focus on life histories or trajectories, conceptualized as sequences of states and sequences of transitions between states. Life histories are modeled as realizations of continuous-time Markov processes. The model parameters, transition rates, are estimated from data on event counts and populations at risk, using the statistical theory of counting processes. The Comprehensive R Network Archive (CRAN) includes several packages for multistate modeling. This book is about Biograph. The package is designed to (a) enhance exploratory analysis of life histories and (b) make multistate modeling accessible. The package incorporates utilities that connect to several packages for multistate modeling, including survival, eha, Epi, mvna,, mstate, msm, and TraMineR for sequence analysis. The book is a 'hands-on' presentation of Biograph and the packages listed. It is written from the perspective of the user. To help the user master the techniques and the software, a single data set is used to illustrate the methods and software. It is the subsample of the German Life History Survey, which was also used by Blossfeld and Rohwer in their popular textbook on event history modeling. Another data set, the Netherlands Family and Fertility Survey, is used to illustrate how Biograph can assist in answering questions on life paths of cohorts and individuals. The book is suitable as a textbook for graduate courses on event history analysis and introductory courses on competing risks and multistate models. It may also be used as a self-study book. The R code used in the book is available online. Frans Willekens is affiliated with the Max Planck Institute for Demographic Research (MPIDR) in Rostock, Germany. He is Emeritus Professor of Demography at the University of Groningen, a Honorary Fellow of the Netherlands Interdisciplinary Demographic Institute (NIDI) in the Hague, and a Research Associate of the International Institute for Applied Systems Analysis (IIASA), Laxenburg, Austria. He is a member of Royal Netherlands Academy of Arts and Sciences (KNAW). He has contributed to the modeling and simulation of life histories, mainly in the context of population forecasting.

The Last Pagan Emperor H. C. Teitler.2017 The Roman emperor Julian (361-363) was raised as a Christian, but soon after apostatized, and, during his short reign, attempted to revive paganism. This provoked the anger of the Christians, who raised accusations against him as a persecutor. In *The Last Pagan Emperor*, these claims are carefully investigated.
