Farmer Education and Farm Efficiency Dean T. Jamison, Lawrence J. Lau, World Bank. 1982 This book explores the relationship between the education farmers have received and their subsequent efficiency as farm operators. The concern is with the self-employed in agriculture, the small farmer. The study is concerned solely with ascertaining empirically the effect of schooling on agricultural efficiency and, when possible, the effect of access to information as measured by exposure to extension services. The study uses data from Korea, Malaysia, and Thailand; related findings from several other countries of Africa, Asia, and Latin America are reviewed. Surveys of individual farms provide the data used in the empirical analyses. Analyses from Thailand indicate that farmers of all educational levels are maximizing profits. However, more educated farmers do have higher levels of profits, which reflect the higher levels of productivity found in the production function analyses. Education has little effect on market efficiency. Higher levels of education and exposure to extension services increase the probabilities of using chemical fertilizers. The effects of education were much more likely to be positive in modernizing agricultural environments rather than in traditional ones.

Mathematisation and Demathematisation .2007-01-01 A common concern of all the authors of this volume is an attempt to draw attention to issues related to the formatting power of mathematics and to its role as implicit knowledge, which results in a process of demathematisation.

Recognising Non-Formal and Informal Learning Outcomes, Policies and Practices Werquin Patrick. 2010-04-15 This book provides policy recommendations on how best to structure and organise systems for recognition of non-formal and informal learning and is based on an OECD review of 22 countries.

The Tyranny of Metrics Jerry Z. Muller. 2019-04-30 How the obsession with quantifying human performance threatens business, medicine, education, government—and the quality of our lives Today, organizations of all kinds are ruled by the belief that the path to success is quantifying human performance, publicizing the results, and dividing up the rewards based on the numbers. But in our zeal to instill the evaluation process with scientific rigor, we've gone from measuring performance to fixating on measuring itself—and this tyranny of metrics now threatens the quality of our organizations and lives. In this brief, accessible, and powerful book, Jerry Muller uncovers the damage metrics are causing and shows how we can begin to fix the problem. Filled with examples from business, medicine, education, government, and other fields, the book explains why paying for measured performance doesn't work, why surgical scorecards may increase deaths, and much more. But Muller also shows that, when used as a complement to judgment based on personal experience, metrics can be beneficial, and he includes an invaluable checklist of when and how to use them. The result is an essential corrective to a harmful trend that increasingly affects us all.

Words and Worlds .2009-01-01 In this book, the reader is invited to enter a strange world in which you can tell the age of the captain by counting the animals on his ship, where runners do not get tired, and where water gets hotter when you add it to other water. It is the world of a curious genre, known as word problems or story problems.

The Advanced Montessori Method Maria Montessori. 1991 Presents the Montessori educational philosophy and methods as they relate to children from the ages of seven to eleven years. Surveys the child's psychical health, freedom and spirit, and considers such phenomena as intelligence,

attention, imagination and will.

World Class Schools Bert Creemers, David Reynolds, Sam Stringfield, Charles Teddlie. 2003-09-02 In this book the authors have conducted extensive research and describe what makes a successful school and how this varies in different countries. The book follows the progress of a cohort of 7-year-old children through their schools over a two-year period. It covers schools in the US, Canada, Hong Kong, Taiwan, Australia, the UK, Norway, the Netherlands, and Ireland and: *draw together what it is that the most and least effective schools do in each country *pinpoints what makes 'effective teaching' across the globe *analyses which effectiveness-producing school and teaching factors appear to be the same and which are context specific *discusses how educational policies can be used to generate World Class Schools and which new blends of practice can, or should be used The existing literature based upon the comparison of the educational achievements of different countries is inadequate. This unique study provides a rich picture of the processes of the education systems of different countries which will appeal to practitioners and policy makers.

Current Research in Bilingualism and Bilingual Education Piotr Romanowski, Małgorzata Jędynak. 2018-07-24 This book covers research topics in bilingual education, language policies, language contact, identity of bilingual speakers, early bilingualism, heritage languages, and more, and provides an overview of current theory, research and practice in the field of bilingualism. Each chapter is written by a specialist in the field. Part I focuses on the numerous and heterogeneous relations between languages as well as the implications arising from bilingual speech processing. In Part II, a series of contextualized studies on bilingual classrooms are presented, with diverse research designs applied in different educational settings being a key feature of these studies. Part III bridges theory and practice by offering an insight into mono- and multilingual school settings showcasing examples of educational institutions where bilingualism successfully soared and depicts the needs related to language education.

Mathematical Modelling in Education Research and Practice Gloria Ann Stillman, Werner Blum, Maria Salett Biembengut. 2015-07-20 In this volume cultural, social and cognitive influences on the research and teaching of mathematical modelling are explored from a variety of theoretical and practical perspectives. The authors of the current volume are all members of the International Community of Teachers of Mathematical Modelling

and Applications, the peak research body in this field. A distinctive feature of this volume is the high number of authors from South American countries. These authors bring quite a different perspective to modelling than has been showcased in previous books in this series, in particular from a cultural point of view. As well as recent international research, there is a strong emphasis on pedagogical issues including those associated with technology and assessment, in the teaching and learning of modelling. Applications at various levels of education are exemplified. The contributions reflect common issues shared globally and represent emergent or on-going challenges.

Musical Creativities in Practice Pamela Burnard.2012-03-22 *Musical Creativities in Practice* explores the social and the cultural contexts in which creativity in music occurs. It begins by considering what constitutes creativity - taking a cross cultural view of music, while investigating creative processes far beyond just the classical music genre - including electronic media, popular music, and improvised music. In addition it looks at creativity in both writing and performing. The field of musical education is a key focus - examining why creativity is important within the educational environment, and looking at how schools might sometimes stifle creativity in their music teaching, rather than encourage it. The book is packed with case studies and real-life examples taken from studies across the world, providing a powerful corrective to myths and outmoded conceptions which privilege the creative practice of individual artists. *Musical Creativity in Practice* argues the need for conceptual expansion of musical creativities in line with vital contemporary real world practices. It explores how different types of musical creativities are recognised and communicated in the real world practices of a diversity of professional musicians. The book covers creative practice issues underlying composing, improvising, singer songwriting, originals bands, DJ cultures, live coding and interactive sound designing and the implications of creativity research for music education and for the assessment of creativities in industry and education. *Musical Creativities in Practice* will be valuable for those in fields of music psychology and music education, from advanced undergraduate level upwards.

The Modern Invention of Information Ronald E Day.2008-02-20 In *The Modern Invention of Information: Discourse, History, and Power*, Ronald E. Day provides a historically informed critical analysis of the concept and politics of information. Analyzing texts in Europe and the United States, his critical reading method goes beyond traditional historiographical readings of communication and information by engaging specific historical texts in terms of their attempts to construct and reshape history. After laying the groundwork and justifying his method of close reading for this study, Day examines the texts of two pre-World War II documentalists, Paul Otlet and Suzanne Briet. Through the work of Otlet and Briet, Day shows how documentation and information were associated with concepts of cultural progress. Day also discusses the social expansion of the conduit metaphor in the works of Warren Weaver and Norbert Wiener. He then shows how the work of contemporary French multimedia theorist Pierre Lévy refracts the earlier philosophical writings of Gilles Deleuze and Félix Guattari through the prism of the capitalist understanding of the “virtual society.”

Turning back to the pre-World War II period, Day examines two critics of the information society: Martin Heidegger and Walter Benjamin. He explains Heidegger's philosophical critique of the information culture's model of language and truth as well as Benjamin's aesthetic and historical critique of mass information and communication. Day concludes by contemplating the relation of critical theory and information, particularly in regard to the information culture's transformation of history, historiography, and historicity into positive categories of assumed and represented knowledge.

Themes in French Culture Rhoda Métraux, Margaret Mead. 2001 Margaret Mead collaborated with her long-time colleague Rhoda Métraux in this unique study of French culture. The Hoover Institute at Stanford University originally published this volume, which grew out of the Columbia University project on Research of Contemporary Cultures in 1954. It is one of the few works by American social scientists dealing with broad themes of French life. Mead and Métraux present a vivid picture of the French starting with the organization of the house and its architecture, and drawing original conclusions for the structure of French families and overall cultural values. This work, long out of print, is a fascinating and penetrating portrait of a contemporary European society.

The Science of Education Part 2B Caleb Gattegno. 2010-03 Until now, it was left to chance to produce the number of mathematicians the world needed. Now we can work deliberately and diligently at increasing their numbers . . . Each individual will be able to decide whether becoming a professional mathematician suits him or her, or whether, after tasting this intellectual nourishment, they prefer other involvements to become more permanent. Such a choice was never mentioned in the past because the gift for doing math was considered rare and not easily brought about in those who did not display it spontaneously. This volume attempts to show how at least the first steps can be taken in this enterprise. -Caleb Gattegno
Writers and Readers in Medieval Italy Armando Petrucci. 1995-01-01 This study of reading and writing in medieval Italy addresses the concerns of how people learned to write, what they wrote and read, how scribes were trained, the purpose for which books were copied, and how ideas about books influenced their use, preservation and transmission.

The Legacy of Hans Freudenthal Leen Streefland. 1994-01-31 The Legacy of Freudenthal pays homage to Freudenthal and his work on mathematics, its history and education. Almost all authors were his scholars or co-workers. They testify to what they learned from him. Freudenthal himself contributes posthumously. His didactical phenomenology of the concept of force is both provocative and revealing in its originality, compared with what is usually found in physics instruction. Freudenthal is portrayed as a universal human being by Josette Adda. He made considerable contributions to mathematics itself, e.g. on homotopy theory and Lie groups in geometry. The exposition of Freudenthal's mathematical life and work is on Van Est's account. Henk Bos discusses his historical work. The essay review of the 8th edition of Hilbert's *Grundlagen der Geometrie* serves as a vehicle of thought. The main part of the book, however, concerns Freudenthal's work on mathematics education. Christine Keitel reviews his final book *Revisiting Mathematics Education* (1991). Fred Goffree describes Freudenthal's 'Working on Mathematics Education' both from an historical as

well as a theoretical perspective. Adrian Treffers analyses Freudenthal's influence on the development of realistic mathematics education at primary level in the Netherlands, especially his influence on the Wiskobas-project of the former IOWO. Freudenthal once predicted the disappearance of mathematics as an individual subject in education sometime around the year 2000, because it would by then have merged with integrated thematic contexts. Jan de Lange anticipates this future development and shows that Freudenthal's prediction will not come true after all. Reflective interludes unveil how he might have influenced those developments. Freudenthal contributed a wealth of ideas and conceptual tools to the development of mathematics education -- on contexts, didactical phenomenology, guided reinvention, mathematisation, the constitution of mental objects, the development of reflective thinking, levels in learning processes, the development of a mathematical attitude and so on -- but he did not design very much concrete material. Leen Streefland deals with the question of design from a theoretical point of view, while applying Freudenthal's ideas on changing perspective and shifting. For teachers, researchers, mathematics educators, mathematicians, educationalists, psychologists and policy makers.

Dewey and European Education Jürgen Oelkers, Heinz Rhyn.2000-04-30 Although John Dewey's ideas have been of central interest in Anglo-Saxon philosophy and history of education, it is only recently that similar interest has developed in continental Europe. Deweyan philosophy of education has had to pass through national filters, which meant that it was received in national contexts of reform. The 'German Dewey' was differently construed to the French, Italian, or English Dewey. This seems to change after 1989 (and the fall of socialist education) when interest in Dewey increased. The new political and philosophical interest in Dewey has to do with the lost alternative 'socialism', and thus with the opening of Eastern Europe and the new problems of education within a worldwide community. This volume stresses two points. The original interest of European education in Dewey will be presented in case studies, concerning different national contexts and thus different Dewey's. What can be called the renewal of interest will be argued from different sides. It is our intention to show that today's interest in Dewey is not the remake of the reception within the different camps of progressive education. This volume will be of interest to philosophers of education, historians of education, and people engaged in the philosophy, history and the reception of Dewey.

Hermeneutics and Catechesis Robert J. Hurley.1997 This work examines aspects of a religious education program published by Paulist Press in the 1960s and 1970s, the Come to the Father series. This is the only study of this major catechetical series. The author examines the interpretation of the Bible in a confessional setting, and explores the history of the modern catechetical renewal in Canada and beyond. The author also critiques the way in which the Come to the Father series exploits the reader's experience in its interpretation of the Bible.

The Disorder of Mathematics Education Hauke Straehler-Pohl, Nina Bohlmann, Alexandre Pais.2016-08-23 Research within a socio-political paradigm or "turn" has been gradually recognized and institutionalized as an important part of mathematics education. This book focuses on the neglected problems, tensions and contradictions evoked by this process. The authors do this by challenging current regimes of truth about mathematics education; by identifying how recent technological developments challenge or suspend contemporary conceptions of mathematics education; by critiquing the ideological entanglement of mathematics, its education and schooling with capitalism; by self-reflective analyses of researchers' impacts on shaping what is and can be perceived as the practice of mathematics education (research); and by confronting main-stream

mathematics education with socio-political contexts that are usually neglected. In this way, mathematical rationality becomes contextualized within contemporary society, where it reproduces itself through technologies, social practices, media and other spheres of social life.
