ISO 31000 - 2018 Enterprise Risk Management Greg Hutchins.2018-05-28 The key idea of this

book is ISO 31000:2018 is a standard that certified companies, consultants, and management system auditors need to know. Why? ISO has integrated risk into ISO 9001:2015 and has adopted the tagline 'Risk Based Thinking' (RBT). All organizations regardless if they are public or private, for profit or not for profit, large or small face uncertainty. Uncertainty results in risks. More organizations will face uncertainty in the design, implementation, and assurance of their Quality Management System (QMS), Environmental Management System (EMS), Information Security Management System (ISMS), and most ISO management systems. The critical organizational challenge over the next decade is how organizations will address and treat the risks that result from the uncertainty. ISO 31000:2018 was developed to address this growing uncertainty. ISO 31000:2018 consists of risk management principles, framework and process that have been adopted as a national risk management standard by more than 60 countries. The ISO 31000:2018 process can be used to:

- Support ISO 9000:2015 in the design and implementation of Risk Based Thinking (RBT).
- Form the basis for Risk Based Problem Solving (RBPS) and Risk Based Decision Making (RBDM).
- Establish the basis and foundation for ISO 31000:2018 Enterprise Risk Management (ERM).
- Become the basis for the organization's risk management principles, framework, and process.
- Identify risk stakeholders, customers, and other interested parties.
- Identify stakeholder risk requirements, needs, and expectations.
- Identify and establish the context for designing, implementing, and assuring a risk management process.
- Evolve as the guideline to evaluate and manage upside risk and downside risk.
- Design and implement a risk management process.
- Treat and manage risks.
- Report and document the results and effectiveness of risk treatment and risk management.
- Communicate the effectiveness of the ISO 31000:2018 risk management framework and process to stakeholders, customers, and interested parties.
- Monitor and review risks based on organizational risk criteria and risk appetite.

Ioannis Tsiouras - The risk management according to the standard ISO 31000 Ioannis

Tsiouras. 2015-09-25 The organizations, of any type and size, conducting their activities are faced to uncertainties, due, mainly, to the factors and influences that reside in the external as well as in the internal context. The uncertainties, therefore, are sources of risks, which have an effect on the achievement of the objectives and the impact could be significant to the business. The organizations to deal with this situation try in any case to manage the risks by implementing approaches more or less known, sometimes in effective manner and sometimes not and often they rely on the technological solutions. To address risks in systematic, effective and efficient manner, the International Organization for Standardization (ISO) has issued a set of standards for the risk. Among them, the main standard for the risk management is the ISO 31000. The ISO 31000 Risk Management - Principles and guidelines is applicable to all types of organizations and to any size and type of goods. The ISO 31000 as a guideline provides a framework for risk management giving quick instructions without examining in detail the concepts and without providing operational support for the effective implementation of methodology proposed. With a wide and significant lived experience in this field, the author proposes to managers, security managers and all those who want or are forced to make decisions in the presence of uncertainty, a practical method for risk management, also through practical case study. The author does not limit to generic interpretations, but develops approaches in detail through matrices and calculations of real risks and refers to case studies bringing examples in order to guide those involved in managing any form of risk in a systematic, transparent and credible and in any scope and context. The book provides an introduction to risk management, to risk governance and to the risk management process; provides an introduction on the concept of risk, risk factors, the level of risk and correlation between the elements involved in risk analysis. It illustrates also the importance of risk management in decision-making, the awareness to the risk management and the benefits that may be obtained from risk management. The author has paid special attention to the process of developing risk management flow and detailing all activities: establishing the context and the scope, risk assessment (identification, analysis and risk assessment), treatment plan with countermeasures to implement in order to reduce the risks, calculation of the residual risks, acceptance of the residual risks proposed, implementation of the countermeasures and monitoring and review. The risk management process here developed is supported by a practical case study example useful to learn and to apply the methodology in all the contexts of the life of the organizations, but also in the activities of life.
