Pedal Power for Occupational Activities Prem Shanker Tiwari.2012-04 Pedalling is the most efficient method of utilizing human power for occupational work. Maximal power produced during pedalling is generally limited by adaptations within the oxygen transport system. On the other hand, the capacity for hand cranking is limited by the amounts of muscle mass engaged. Owing to these limitations, a person can generate more power (about four times) by pedalling than by hand cranking. Research work on the ergonomics of bicycle, reported in literature, mainly deals with sports and rehabilitation activities. However, the use of pedal power for occupational work such as stationary farm operations has got scant attention in the past. Keeping these points into consideration a study was conducted at CIAE, Bhopal to optimise the design parameters for a pedal operated rotary device (dynapod), which could be used as an interface between human worker and any rotary type process machine. The developed dynapod was interfaced with a hand operated rotary type maize sheller and the performance of the machine and drudgery reduction while operated in pedalling mode was quantified and compared with those of hand cranking mode.

Water from Sand Rivers Stephen Hussey.2007-01-15 Sand rivers can be found in arid and semi-arid areas of the world where water is in short supply. Despite their dry appearance, useable quantities of water often reside in aquifers beneath the surface and can provide a sustainable and safe supply for rural communities. Nevertheless, dry rivers are often overlooked as a realizable source of water. This book sets out to address this issue and promotes the abstraction of water from sand rivers as a viable and affordable option for dryland areas. It enables the reader to assess the potential for abstraction from beneath a dry river bed and provides practical guidelines for doing so. The book is a 'how to' manual and is essential reading for engineers, technicians, fieldworkers and project planners who are faced with the challenge of providing and sustaining safe and reliable water sources for low-income communities. It is also aimed at providing decision-makers in the water industry, commercial, government and non-governmental organizations with an overview of an alternative, appropriate water supply solution for dryland areas.

An Easy Pedal Richard Jakl.2018-12-11 The converting of my bicycle to a pedal assist electric started with the idea of putting to use an automotive power window motor I had for many years. I first made a list of my design objectives. Main objectives were: very easy to pedal or no pedaling, very low in cost, parts readily available, simple design to make and assemble. I took this project as a fun engineering challenge. After making many various prototypes, the final design concept made pedaling almost effortless. I thank two of my grandchildren for making suggestions, comments and helped with some road testing. After further testing, I thought why not share this design concept with others and write a book on how to convert a bicycle to a pedal assist electric. Pedal assist electric bicycles are not conserved motorized vehicles, so they can travel on pathways and trails marked Motorized Vehicles Prohibited The step by step building instructions, detailed drawings,

schematics, wiring diagrams, complete material lists and many pictures should greatly help in building and assembly. Hopefully you can make this a fun project as it was for me.
