Bâtir René Vittone.2010 Bâtir, c'est concevoir, inventer, réaliser, et cet art s'inscrit dans les limites de règles de construction précises liées aux contraintes extérieures naturelles ou artificielles ainsi qu'aux exigences des utilisateurs. Ce Manuel de la construction offre un synopsis exhaustif des méthodes de construction. Il apporte au bâtisseur une assistance dans la partie technique de ses prestations et constitue pour lui un instrument pratique de consultation. A cet effet, il se subdivise en six parties fondamentales : la première rassemble les principales contraintes et exigences que constituent les données du problème de bâtir ; les suivantes présentent les éléments constitutifs de la construction et leur mise en oeuvre. Véritable bible de l'art de bâtir, très vite devenue la référence en la matière, cet ouvrage est illustré de plus de 1500 dessins de construction ; il est l'aboutissement d'une double expérience, celle d'une pratique professionnelle d'architecte façonnée par les multiples tribulations de la 'construction et celle d'une activité d'enseignant enrichie par la curiosité critique des étudiants. Le livre se propose donc d'offrir autant aux étudiants en architecture, génie civil ou génie rural qu'aux bureaux d'architectes, ingénieurs ou entreprises de construction la meilleure connaissance de l'art de construire ainsi qu'une aide précieuse dans cette extraordinaire aventure qu'est le projet architectural. Cette nouvelle édition a été entièrement revue sous l'angle des exigences contemporaines d'économies d'énergie et de la prise en compte du concept de développement durable, dont les répercussions sont importantes et inévitables sur l'art de bâtir. Elle fait ainsi état de l'ensemble des contraintes actuelles et des nouvelles normes en la matière.

Architects' Data Ernst Neufert, Peter Neufert.1991-01-15 This is an essential aid in the initial design and planning of a project. The relevant building type is located by a comprehensive index and cross reference system, a condensed commentary covers user requirements, planning criteria, basic dimensions and other considerations of function, siting aspect etc. A system of references based on an extensive bibliography supports the text. In every section plans, sections, site layouts, design details and graphs illustrated key aspects of a building type's design. Most illustrations are dimensioned or scaled - the metric system of measurement is used throughout, and the equivalent in feet/inches can easily be read either off a graphic scale on the page or from the built-in conversion table. The illustrations are international in origin and include both well know and less famous designers. Architects Data is primarily a handbook of building types rather than of construction techniques and details. However its treatment of components (such as doors and windows) and of spaces for building services is extremely thorough, since consideration of this data is an essential element of the planning process. The opening pages of basic data on man and his buildings cover critical subjects such as scale, drawing practice, noise, light and space for the same reason. Particular attention has also been paid to the implications of energy conservation, means of escape from fire and the needs of the elderly and the disabled.

Islam and Democracy in the Maldives Azim Zahir.2021-11-29 This book examines Islam's relationship to democratization in the Indian Ocean nation of the Maldives. It explores how and why an electoral democracy based in a constitution that has many liberal features but also Islam-based limitations, especially lack of religious freedom, emerged in the country by 2009. In doing so, the book interrogates a major approach to Muslim politics that assumes reformist interpretations of Islam are a positive, and even a necessary, force for liberalization and democratization in Muslim-majority contexts. This book shows reformist Islam did play certain positive roles in democratization in the Maldives. However, the book suggests reformist Islam may not be an invariably uncontroversial force in the space of politics. It argues that modern nation building in the Maldives shaped by political actors with reformist Islamic orientations, since around the 1930s, has also completely transformed Islam as a modern institutional and discursive political religion. These transformations of Islam as a modern political religion have existed as path-dependent constraints on the depth of democratization, ensuring religion-based limitations and intensifying controversy over religion vis-à-vis the state and individual rights. An original empirical contribution towards a better understanding of Islam and politics in the Maldives, this book will be of interest to academics and students working on democracy, and Islam in particular, and in the fields of political science and area studies, especially South Asian politics.
