**Raised by Animals** Jennifer L. Verdolin.2017-05-02 When it comes to family matters, do humans know best? Leading animal behaviorist Dr. Jennifer Verdolin argues otherwise in this eye-opening book. Welcome to the wild world of raising a family in the animal kingdom . . . sometimes shocking, often ingenious! Every species can surprise us: Chimps have a knack for minimizing temper tantrums, and owl chicks have a remarkable gift for sharing. A prairie vole knows exactly when his stressed-out partner needs a massage. And anyone who considers reptiles "cold-blooded" should consider the caecilian, a snakelike animal from Kenya: After laying eggs, the mother grows a fatty layer of skin, which her babies eat after hatching (not one of the book's many lessons from the wild to be tried at home!). Along the way Verdolin challenges our often counterproductive beliefs about what families ought to be like and how we should feel. By finding common ground with our furry, feathered, and even slimy cousins, we can gain new insight on what "natural" parenting really means—and perhaps do a better job of forgiving ourselves for those days when we're "only human"!

**Our Babies, Ourselves** Meredith Small.2011-09-07 A thought-provoking combination of practical parenting information and scientific analysis, *Our Babies, Ourselves* is the first book to explore why we raise our children the way we do--and to suggest that we reconsider our culture's traditional views on parenting. New parents are faced with innumerable decisions to make regarding the best way to care for their baby, and, naturally, they often turn for guidance to friends and family members who have already raised children. But as scientists are discovering, much of the trusted advice that has been passed down through generations needs to be carefully reexamined. In this ground-breaking book, anthropologist Meredith Small reveals her remarkable findings in the new science of ethnopediatrics. Professor Small joins pediatricians, child-development researchers, and anthropologists across the country who are studying to what extent the way we parent our infants is based on biological needs and to what extent it is based on culture--and how sometimes what is culturally dictated may not be what's best for babies. Should an infant be encouraged to sleep alone? Is breast-feeding better than bottle-feeding, or is that just a myth of the nineties? How much time should pass before a mother picks up her crying infant? And how important is it really to a baby's development to talk and sing to him or her? These are but a few of the important questions Small addresses, and the answers not only are surprising, but may even change the way we raise our children.
