**Atlas of Implant Dentistry and Tooth-Preserving Surgery** Zoran Stajčić.2017-03-29 This atlas is unique in comparing the two disciplines of dental implant surgery and tooth-preserving surgery with respect to common procedures, problems, and failures and in providing excellent guidance on the prevention and management of complications. The etiology of a wide variety of implant-related and non-implant-related complications and failures is carefully explained. Since many complications have their roots in oral and periodontal surgical maneuvers, these maneuvers are themselves discussed and extensively illustrated. The most frequently used tooth preservation procedures are also fully described, with emphasis on correct surgical technique as a means to avoid complications. The use of these procedures is constantly weighed against the effects of tooth removal and insertion of dental implants. The text is complemented by the inclusion of a substantial number of helpful references. While the atlas is intended primarily for dentists involved in outpatient implant dentistry and oral surgery, oral and maxillofacial surgeons will also find the descriptions of innovative techniques or maneuvers to be of interest, including those relating to the selection of incision and flap design and the sinus floor elevation techniques.

**Practical Lessons in Endodontic Surgery** Donald E. Arens, Mahmoud Torabinejad, Noah Chivian, Richard Rubinstein. 1998 As a supplement to the book with the same title, these two videos present fourteen case studies of endodontic surgeries. The surgical procedures and techniques explained in detail in the book are shown here step-by-step and performed on each tooth type. The videos begin with simple maxillary procedures and move to more complex surgeries. The cases are surgical retreatments of conditions unsuccessfully treated with conventional endodontic therapy. Shown are techniques in performing incision and drainage, root amputation, hemisection, extraction and replantation, retrograde root canal therapy, and repair of root perforations surgically and nonsurgically. Guided tissue regeneration procedures are performed on the maxillary and mandibular molars. These videos were produced in conjunction with Loma Linda University School of Dentistry Continuing Education Department.

Management of Fractured Endodontic Instruments Theodor Lambrianidis. 2017-09-28 This superbly illustrated book provides detailed information on the causes of instrument failure during endodontic treatment, the factors influencing the management of such cases, and the diverse management options that may be employed to resolve the problem. Readers will find clear descriptions and comparative evaluation of the available methods, techniques, and devices. Complications that may arise during the management of fractured instruments are described, and the impact of retained file fragments on the prognosis of endodontic treatment is discussed.
