User Models in Dialog Systems Alfred Kobsa, Wolfgang Wahlster. 2012-12-06 User models have recently attracted much research interest in the field of artificial intelligence dialog systems. It has become evident that flexible user-oriented dialog behavior of such systems can be achieved only if the system has access to a model of the user containing assumptions about his/her background knowledge as well as his/her goals and plans in consulting the system. Research in the field of user models investigates how such assumptions can be automatically created, represented and exploited by the system in the course of an on-line interaction with the user. The communication medium in this interaction need not necessarily be a natural language, such as English or German. Formal interaction languages are also permitted. The emphasis is placed on systems with natural language input and output, however. A dozen major and several more minor user modeling systems have been designed and implemented in the last decade, mostly in the context of natural-language dialog systems. The goal of UM86, the first international workshop on user modeling, was to bring together the researchers working on these projects so that results could be discussed and analyzed, and hopefully general insights be found, that could prove useful for future research. The meeting took place in Maria Laach, a small village some 40 miles south of Bonn, West Germany. 25 prominent researchers were invited to participate.

Experiments in Ethics Kwame Anthony Appiah. 2010-03-30 In the past few decades, scientists of human nature—including experimental and cognitive psychologists, neuroscientists, evolutionary theorists, and behavioral economists—have explored the way we arrive at moral judgments. They have called into question commonplaces about character and offered troubling explanations for various moral intuitions. Research like this may help explain what, in fact, we do and feel. But can it tell us what we ought to do or feel? In *Experiments in Ethics*, the philosopher Kwame Anthony Appiah explores how the new empirical moral psychology relates to the age-old project of philosophical ethics. Some moral theorists hold that the realm of morality must be autonomous of the sciences; others maintain that science undermines the authority of moral reasons. Appiah elaborates a vision of naturalism that resists both temptations. He traces an intellectual genealogy of the burgeoning discipline of experimental philosophy, provides a balanced, lucid account of the work being done in this controversial and increasingly influential field, and offers a fresh way of thinking about ethics in the classical tradition. Appiah urges that the relation between empirical research and morality, now so often antagonistic, should be seen in terms of dialogue, not contest. And he shows how experimental philosophy, far from being something new, is actually as old as philosophy itself. Beyond illuminating debates about the connection between psychology and ethics, intuition and theory, his book helps us to rethink the very nature of the philosophical enterprise.

Analytical Applications of Nuclear Techniques International Atomic Energy Agency. 2004 The IAEA has compiled this overview of current applications of nuclear analytical techniques (NATs). The contributions included in this book describe a variety of nuclear techniques and applications, such as those in the fields of environment and health, industrial processes, non-destructive testing, forensic and archaeological investigations, cosmochemistry and method validation. The techniques covered range from classical instrumental neutron activation analysis (INAA), its radiochemical derivative RNAA, in-beam methods such as prompt γ neutron activation analysis (PGNAA) and accelerator mass spectrometry (AMS), to X ray fluorescence (XRF) and proton induced X ray emission (PIXE) spectroscopy. Isotopic techniques to investigate element behaviour in biology and medicine, and also to validate other non-nuclear analytical techniques, are described. Destructive and non-destructive approaches are presented, along with their use to investigate very small and very large samples, archaeological samples and extraterrestrial samples. Several nuclear analytical applications in industry are described that have considerable socioeconomic impact wherever they can be implemented.

Cities in Crisis Jörg Knieling, Frank Othengrafen. 2015-09-16 In recent years, European societies and territories have witnessed the spatial impacts of a severe financial and socio-economic crisis. This book builds on the current debate concerning how cities and urban regions and their citizens deal with the consequences of the recent financial and socio-economic crisis. *Cities in Crisis* examines the political and administrative implications of austerity measures applied in southern European cities. These include cuts in local public spending and the processes of privatization of local public assets, as well as issues related to the re-scaling, recentralization or decentralization of competencies. Attention is paid to the rise of new 'austerity regimes', the question of their legitimacy and their spatial manifestations, and in particular to the social consequences of austerity. The contributions to this book lay the foundation for recommendations on how to improve and consolidate qualified governance arrangements in order to better address rapid economic and social changes. Such recommendations are applicable to cities and urban regions both within and outside of Europe. It identifies possible approaches, tools and partnerships to tackle the effects of the crisis and to prepare European cities for future challenges.

Cross Reality and Data Science in Engineering Michael E. Auer, Dominik May. 2020-08-20 Today, online technologies are at the core of most fields of engineering and society as a whole. This book discusses the fundamentals, applications and lessons learned in the field of online and remote engineering, virtual instrumentation, and other related technologies like Cross Reality, Data Science & Big Data, Internet of Things & Industrial Internet of Things, Industry 4.0, Cyber Security, and M2M & Smart Objects. Since the first Remote Engineering and Virtual Instrumentation (REV) conference in 2004, the event has focused on the use of the Internet for engineering tasks, as well as the related opportunities and challenges. In a globally connected world, interest in online collaboration, teleworking, remote services, and other digital working environments is rapidly increasing. In this context, the REV conferences discuss fundamentals, applications and experiences in the field of Online and Remote Engineering as well as Virtual Instrumentation. Furthermore, the conferences focus on guidelines and new concepts for engineering education in higher and vocational education institutions, including emerging technologies in learning, MOOCs & MOOLs, and open resources. This book presents the proceedings of REV2020 on "Cross Reality and Data Science in Engineering" which was held as the 17th in series of annual events. It was organized in cooperation with the Engineering Education Transformations Institute and the Georgia Informatics Institutes for Research and Education and was held at the College of Engineering at the University of Georgia in Athens (GA), USA, from February 26 to 28, 2020.

Ex Voto Ittai Weinryb. 2016 Derived from the Latin term *ex voto suscepto* meaning made in accordance with a vow, *ex votos* embody the hopes, dreams, and anxieties of the people who deposited them. Thus, almost anything, no matter its size, weight, form, or original function, can become a votive object. The category *ex voto* refers to a particular subset of the material world in which objects are not necessarily made with the intention of being votive, but become charged with votive meaning once they have been consecrated to a deity or deities. The variety of materials, forms, techniques of making, and manner of dedication all suggest that the wide array of materialized aspects of human devotion, function as a category in itself. This volume one of the only collections dedicated exclusively to the subject has been compiled with the assumption that a shared conceptual framework underpins the objects produced as part of the ritual of votive giving, and that by merit of their dedication they have become a category which represents a stage and a place in the life of a material artifact. As such, *Ex Voto: Votive Giving Across Cultures*, is a comparative study, and the volume ranges from the classical Mediterranean world, through medieval Italy and northern Europe, to the period of the Catholic Reform and on to Mexico, Shinto and Buddhist Japan, and Muslim Iran. This volume will be read with interest and stimulate fresh discussion across cultures and disciplines.

Bodies of Evidence Jane Draycott.2017-07-05 Dedicating objects to the divine was a central component of both Greek and Roman religion. Some of the most conspicuous offerings were shaped like parts of the internal or external human body: so-called 'anatomical votives'. These archaeological artefacts capture the modern imagination, recalling vividly the physical and fragile bodies of the past whilst posing interpretative challenges in the present. This volume scrutinises this distinctive dedicatory phenomenon, bringing together for the first time a range of methodologically diverse approaches which challenge traditional assumptions and simple categorisations. The chapters presented here ask new questions about what constitutes an anatomical votive, how they were used and manipulated in cultural, cultic and curative contexts and the complex role of anatomical votives in negotiations between humans and gods, the body and its disparate parts, divine and medical healing, ancient assemblages and modern collections and collectors. In seeking to re-contextualise and re-conceptualise anatomical votives this volume uniquely juxtaposes the medical with the religious, the social with the conceptual, the idea of the body in fragments with the body whole and the museum with the sanctuary, crossing the boundaries between studies of ancient religion, medicine, the body and the reception of antiquity.

Cultural Histories of the Material World Peter N. Miller.2013-07-23 A collection of essays from leading figures in numerous fields exploring the ways human beings have perceived, shaped, and interpreted the material world

Global Perspectives on Europe Bea Lundt,Sophie Wulk.2016 This volume is dedicated to how Europe is seen from outside. Bringing together external perspectives on Europe and the European Union from five continents, its aim is to assess the region's current international position, its credibility as an international player, and its reach and impact beyond its borders. From their different backgrounds-politics, sociology, economy, history, and education-the authors use case studies to present their research and, mostly critical, points of view on the entanglement of Europe with the rest of the world. Whiplash Injury Andreas Otte.2012-03-19 In the past two decades much has been published on whiplash injury, yet both the confusion regarding the condition and the medicolegal discussion surrounding it have increased. In this scenario, a guide to recent and current international research in the field is more necessary than ever. Especially functional imaging methods - such as single-photon emission tomography, positron emission tomography, functional MRI, and hybrid techniques - have demonstrated a variety of significant brain alterations. This book accordingly offers a critical approach to the challenging interpretation of the new research data obtained using functional neuroimaging in whiplash injury. It covers all aspects, including the imaging tools themselves and the different methods of image analysis. Whiplash Injury: New Methods of Functional Neuroimaging will hopefully help patients, their relatives and friends, physicians, and others to understand this condition as a disease.

The Computer - My Life Konrad Zuse.2013-03-09 Konrad Zuse is one of the great pioneers of the computer age. He created the first fully automated, program controlled, freely programmable computer using binary floating-point calculation. It was operational in 1941. He built his first machines in Berlin during the Second World War, with bombs falling all around, and after the war he built up a company that was taken over by Siemens in 1967. Zuse was an inventor in the traditional

style, full of phantastic ideas, but also gifted with a powerful analytical mind. Single-handedly, he developed one of the first programming languages, the Plan Calculus, including features copied only decades later in other languages. He wrote numerous books and articles and won many honors and awards. This is his autobiography, written in an engagingly lively and pleasant style, full of anecdotes, reminiscences, and philosophical asides. It traces his life from his childhood in East Prussia, through tense wartime experiences and hard times building up his business after the war, to a ripe old age and well-earned celebrity.

Printed Art Riva Castleman, Museum of Modern Art (New York, N.Y.).1980 The explosive development of the practice and technology of printed art has been a fundamental characteristic of the art of the 1960s and 1970s. Never in the past have had so many artists devoted so much of their creative energy to the production of fine prints and to innovative work with printed materials, to the media of multiplication rather than the arts of the unique work. This book is an international survey of diverse styles and techniques of the period: the revival of traditional lithography and etching; the development and intensive use of silkscreen processes; the refinement of aquatint; adaptations of photographically induced images; experimentation with Xerox, rubber stamp, blueprint, and other commercial methods. Miss Castleman discusses the effect of new scientific processes, new papers and materials, and the growth of the audience for printed art, along with the establishment of fine workshop facilities and close collaboration between artists and technicians. She considers the intellectual influence of minimalist and conceptual art and comments upon the political and social implications of the artist's search for widespread communication of creative expression. More than a hundred works are illustrated, representing such artists as Jennifer Bartlett, Joseph Beuys, David Hockney, Jasper Johns, Ellsworth Kelly, Joan Miro, and Andy Warhol.

Snohetta Works Snohetta (Firm).2009 Snohetta is a leading team of architects in Norway with offices in Oslo and New York. This first-ever publication to document their work presents and illustrates the most important current and completed projects of these architects, who have been active internationally for fifteen years, and contains texts by various authors. Projects include the Library of Alexandria (2002), the New Opera House in Oslo (2008), and the Gateway Project in Ras Al-Khaimah, Dubai. Snohetta (TM)'s works and projects revolve around a collaboration and interchange between various disciplines. The architects attach great importance to connecting architecture with landscape architecture and interior design. In each of their projects, fundamental aspects of site, landscape, and context are freshly observed and discussed, which enables them to discover and develop a constant stream of new and varied solutions. As part of their effort to interweave multiple disciplines, the architects of Snohetta always involve locally and internationally well-known artists in their important projects. For Snohetta, working together with artists from the early conceptual phase of a project onward constitutes an important factor for later stages of the process.
