Extended Abstracts Fall 2013 Maria del Mar González,Paul C. Yang,Nicola Gambino,Joachim Kock.2015-11-12 The two parts of the present volume contain extended conference abstracts corresponding to selected talks given by participants at the Conference on Geometric Analysis (thirteen abstracts) and at the Conference on Type Theory, Homotopy Theory and Univalent Foundations (seven abstracts), both held at the Centre de Recerca Matemàtica (CRM) in Barcelona from July 1st to 5th, 2013, and from September 23th to 27th, 2013, respectively. Most of them are brief articles, containing preliminary presentations of new results not yet published in regular research journals. The articles are the result of a direct collaboration between active researchers in the area after working in a dynamic and productive atmosphere. The first part is about Geometric Analysis and Conformal Geometry; this modern field lies at the intersection of many branches of mathematics (Riemannian, Conformal, Complex or Algebraic Geometry, Calculus of Variations, PDE's, etc) and relates directly to the physical world, since many natural phenomena posses an intrinsic geometric content. The second part is about Type Theory, Homotopy Theory and Univalent Foundations. The book is intended for established researchers, as well as for PhD and postdoctoral students who want to learn more about the latest advances in these highly active areas of research.

First International Conference on Resource Efficiency in Interorganizational Networks - ResEff 2013 - Geldermann, Jutta,Schumann, Matthias.2013-11-26 Renewable raw materials are becoming increasingly important as an alternative resource base in industrial networks. Consequently, research for methods improving the efficient use of renewable resources in production processes with by-products is crucial. The aim is cascade utilization, thus the multiple utilization of a raw material before its conversion into energy. The International Conference on Resource Efficiency in Interorganizational Networks (ResEff) brings together interdisciplinary researchers developing strategies and solution concepts for efficient resource utilization. It is therefore a platform for scientific exchange both between experts as well as interdisciplinary groups from agricultural and forestry science, mathematical optimization, operations research, marketing, business informatics, production and logistics. The following facets of the challenging topic of resource efficiency in interorganizational networks are covered: Materials, technologies, planning of production and value-added networks for renewable resources as well as governance, coordination and sale of products from renewable resources.

Connections Between Algebra, Combinatorics, and Geometry Susan M. Cooper,Sean Sather-Wagstaff.2014-05-16 Commutative algebra, combinatorics, and algebraic geometry are thriving areas of mathematical research with a rich history of interaction. Connections Between Algebra and Geometry contains lecture notes, along with exercises and solutions, from the Workshop on Connections Between Algebra and Geometry held at the University of Regina from May 29-June 1, 2012. It also contains research and survey papers from academics invited to participate in the companion Special Session on Interactions Between Algebraic Geometry and Commutative Algebra, which was part of the CMS Summer Meeting at the University of Regina held June 2-3, 2012, and the meeting Further Connections Between Algebra and Geometry, which was held at the North Dakota State University February 23, 2013. This volume highlights three mini-courses in the areas of commutative algebra and algebraic geometry: differential graded commutative algebra, secant varieties, and fat points and symbolic powers. It will serve as a useful resource for graduate students and researchers who wish to expand their knowledge of commutative algebra, algebraic geometry, combinatorics,

and the intricacies of their intersection.

Ocean Governance, Regimes, and the South China Sea Issues Peter Kien-hong YU.2015-05-05 This book uses Chinese version of dialectics to present interpretations of ocean governance, international regimes, issues in the South China Sea in general and the Chinese U-shaped line in particular, through the one-dot theory. It especially serves as a tool for non-Chinese researchers and experts interested in analyzing international relations issues from a Chinese perspective. The dialectical one-dot theory, which is a superior model to the dialectical Yin and Yang or the dialectical crab and frog motion model, provides research and findings that more closely mirror reality than do other, non-dialectical approaches and research methods. Further, it can be applied to both the natural and social sciences. The book is divided into three parts — Methodology, Case Studies Related to International Regimes and Non-“International Regimes,” and Issues Related to the U-shaped Line in the South China Sea — with each chapter structured in terms of the one-dot theory. In addition to researchers and experts involved in marine and maritime affairs, this book will also appeal to all readers interested in Chinese Philosophy, International Relations, and Strategic Culture.

Automorphisms in Birational and Affine Geometry Ivan Cheltsov,Ciro Ciliberto,Hubert Flenner,James McKernan,Yuri G. Prokhorov,Mikhail Zaidenberg.2014-06-11 The main focus of this volume is on the problem of describing the automorphism groups of affine and projective varieties, a classical subject in algebraic geometry where, in both cases, the automorphism group is often infinite dimensional. The collection covers a wide range of topics and is intended for researchers in the fields of classical algebraic geometry and birational geometry (Cremona groups) as well as affine geometry with an emphasis on algebraic group actions and automorphism groups. It presents original research and surveys and provides a valuable overview of the current state of the art in these topics. Bringing together specialists from projective, birational algebraic geometry and affine and complex algebraic geometry, including Mori theory and algebraic group actions, this book is the result of ensuing talks and discussions from the conference “Groups of Automorphisms in Birational and Affine Geometry” held in October 2012, at the CIRM, Levico Terme, Italy. The talks at the conference highlighted the close connections between the above-mentioned areas and promoted the exchange of knowledge and methods from adjacent fields.

Social Studies for Secondary Schools Alan J. Singer.2014-10-08 Now in its 4th edition, this popular text for secondary social studies methods courses integrates discussions of educational goals and the nature of history and social studies with ideas for organizing social studies curricula, units, lessons, projects, and activities. A major theme throughout is that what teachers choose to teach and the way they teach reflect their broader understanding of society, history, and the purpose of social studies education. Advocating an inquiry and activity-based view of social studies teaching that respects the points of view of students and teachers, and based in practice and experience, it offers systematic support and open, honest advice for new teachers. Each chapter addresses a broad question about social studies education; sub-chapters begin with narrower questions that direct attention to specific educational issues. Lesson ideas and materials in the book and online are especially designed to help new teachers to address common core learning standards, to work in inclusive settings, and to promote literacy and the use of technology in social studies classrooms. Chapters include highlighted Learning Activities, Teaching Activities, and Classroom Activities designed to provoke discussion and illustrate different approaches to teaching social studies, and conclude with recommendations for further reading and links to on-line essays about related social studies topics. Activities are followed by four categories: Think it over, Add your voice to the discussion, Try it yourself, and It’s your classroom. All of these are supported with online teaching material. Designed for undergraduate and graduate pre-service social studies methods courses, this text is also useful for in-service training programs, as a reference for new social studies teachers, and as a resource for experienced social studies educators who are engaged in rethinking their teaching practice. New in the Fourth Edition Provides a number of new lesson ideas paired with online lesson plans and activity sheets in every chapter Takes a new focus on data-driven, standards-based instruction, especially in relation to the common core curriculum Addresses the interactive nature of learning in updated technology sections Reflects current trends in history education Includes more of what the author has learned from working teachers Offers a wealth of additional on-line material linked to the text

Anti-Imperialist Modernism Benjamin Balthaser.2021-03-11 Anti-Imperialist Modernism excavates how U.S. cross-border, multi-ethnic anti-imperialist movements at mid-century shaped what we understand as

cultural modernism and the historical period of the Great Depression. The book demonstrates how U.S. multiethnic cultural movements, located in political parties, small journals, labor unions, and struggles for racial liberation, helped construct a common sense of international solidarity that critiqued ideas of nationalism and essentialized racial identity. The book thus moves beyond accounts that have tended to view the pre-war "Popular Front" through tropes of national belonging or an abandonment of the cosmopolitanism of previous decades. Impressive archival research brings to light the ways in which a transnational vision of modernism and modernity was fashioned through anti-colonial networks of North/South solidarity. Chapters examine farmworker photographers in California's central valley, a Nez Perce intellectual traveling to the Soviet Union, imaginations of the Haitian Revolution, the memory of the U.S.-Mexico War, and U.S. radical writers traveling to Cuba. The last chapter examines how the Cold War foreclosed these movements within a nationalist framework, when activists and intellectuals had to suppress the transnational nature of their movements, often rewriting the cultural past to conform to a patriotic narrative of national belonging.

Methods of Solving Complex Geometry Problems Ellina Grigorieva.2013-08-13 This book is a unique collection of challenging geometry problems and detailed solutions that will build students' confidence in mathematics. By proposing several methods to approach each problem and emphasizing geometry's connections with different fields of mathematics, *Methods of Solving Complex Geometry Problems* serves as a bridge to more advanced problem solving. Written by an accomplished female mathematician who struggled with geometry as a child, it does not intimidate, but instead fosters the reader's ability to solve math problems through the direct application of theorems. Containing over 160 complex problems with hints and detailed solutions, *Methods of Solving Complex Geometry Problems* can be used as a self-study guide for mathematics competitions and for improving problem-solving skills in courses on plane geometry or the history of mathematics. It contains important and sometimes overlooked topics on triangles, quadrilaterals, and circles such as the Menelaus-Ceva theorem, Simson's line, Heron's formula, and the theorems of the three altitudes and medians. It can also be used by professors as a resource to stimulate the abstract thinking required to transcend the tedious and routine, bringing forth the original thought of which their students are capable. *Methods of Solving Complex Geometry Problems* will interest high school and college students needing to prepare for exams and competitions, as well as anyone who enjoys an intellectual challenge and has a special love of geometry. It will also appeal to instructors of geometry, history of mathematics, and math education courses.

Nonarchimedean and Tropical Geometry Matthew Baker, Sam Payne. 2016-08-18 This volume grew out of two Simons Symposia on Nonarchimedean and tropical geometry which took place on the island of St. John in April 2013 and in Puerto Rico in February 2015. Each meeting gathered a small group of experts working near the interface between tropical geometry and nonarchimedean analytic spaces for a series of inspiring and provocative lectures on cutting edge research, interspersed with lively discussions and collaborative work in small groups. The articles collected here, which include high-level surveys as well as original research, mirror the main themes of the two Symposia. Topics covered in this volume include: Differential forms and currents, and solutions of Monge-Ampere type differential equations on Berkovich spaces and their skeletons; The homotopy types of nonarchimedean analytifications; The existence of faithful tropicalizations which encode the topology and geometry of analytifications; Relations between nonarchimedean analytic spaces and algebraic geometry, including logarithmic schemes, birational geometry, and the geometry of algebraic curves; Extended notions of tropical varieties which relate to Huber's theory of adic spaces analogously to the way that usual tropical varieties relate to Berkovich spaces; and Relations between nonarchimedean geometry and combinatorics, including deep and fascinating connections between matroid theory, tropical geometry, and Hodge theory.

Semantics and Beyond Piotr Stalmaszczyk. 2014-08-27 Papers in the collection concentrate on different issues relevant for contemporary research within semantics, such as the linguistic and philosophical status of representations, reference theory and indexicals, situation semantics, formal semantics, normativity of meaning and speech acts, and different approaches to context and contextualism. The authors investigate the links between semantics and syntax, and between semantics, pragmatics, and speech act theory, and demonstrate that it is possible to integrate findings from different disciplines. Recent studies often advocate a 'pragmatic turn' in the study of meaning and context; however, the papers in the volume show that semantics and meaning remain in the center of research carried out within contemporary linguistics and philosophy, especially the philosophy of language. The volume includes contributions by: Brian Ball (St Anne's College, Oxford), John Collins (University of East Anglia), Luis Fernández Moreno (Complutense University of Madrid), Chris Fox (University of Essex), Filip Kawczyński (University of Warsaw), Katarzyna Kijania-Placek (Jagiellonian University), Joanna Klimczyk (Polish Academy of Sciences), Paul Livingston (University of New Mexico), Mark Pinder (University of Bristol), Ernesto Perini-Santos (Universidade Federal de Minas Gerais), Tabea Reiner (Ludwig-Maximilians-Universität, Munich), Stefan Rieglert (University of Zurich), Arthur Sullivan (Memorial University of Newfoundland), Massimiliano Vignolo (University of Genoa), and Marián Zouhar (Slovak Academy of Sciences). The volume should be of interest to linguists, philosophers of language, and philosophers in general.

ISCS 2013: Interdisciplinary Symposium on Complex Systems Ali Sanayei, Ivan Zelinka, Otto E. Rössler. 2014-02-15 The book you hold in your hands is the outcome of the ISCS 2013: Interdisciplinary Symposium on Complex Systems held at the historical capital of Bohemia as a continuation of our series of symposia in the science of complex systems. Prague, one of the most beautiful European cities, has its own beautiful genius loci. Here, a great number of important discoveries were made and many important scientists spent fruitful and creative years to leave unforgettable traces. The perhaps most significant period was the time of Rudolf II who was a great supporter of the art and the science and attracted a great number of prominent minds to Prague. This trend would continue. Tycho Brahe, Niels Henrik Abel, Johannes Kepler, Bernard Bolzano, August Cauchy, Christian Doppler, Ernst Mach, Albert Einstein and many others followed developing fundamental mathematical and physical theories or expanding them. Thus in the beginning of the 17th century, Kepler formulated here the first two of his three laws of planetary motion on the basis of Tycho Brahe's observations. In the 19th century, nowhere differentiable continuous functions (of a fractal character) were constructed here by Bolzano along with a treatise on infinite sets, titled "Paradoxes of Infinity" (1851). Weierstrass would later publish a similar function in 1872. In 1842, Doppler as a professor of mathematics at the Technical University of Prague here first lectured about a physical effect to bear his name later. And the epoch-making physicist Albert Einstein - while being a chaired professor of theoretical physics at the German University of Prague - arrived at the decisive steps of his later finished theory of general relativity during the years 1911-1912. In Prague, also many famous philosophers and writers accomplished their works; for instance, playwright Karel Čapek coined the word robot in Prague ("robot" comes from the Czech word "robota" which means "forced labor").
