Sub Danny Danziger.2011-08-04 At any given time, up to three of the Royal Navy's nuclear submarines lurk undetected in the world's oceans. Totally self-sufficient for months at a time, they lie in readiness to be deployed to listen, intercept, or attack wherever they may be needed. And should the UK be devastated by a nuclear strike, they might just be the last military force standing. Award-winning journalist Danny Danziger has been allowed unprecedented access to one of the attack class submarines of the 'silent service', joining the crew on operations for weeks on end, living among them and hearing their stories. Unrestricted and uncompromising, it paints a vivid picture of this enigmatic branch of our armed forces. In an increasingly unstable world, these are the people who are in the best position to keep us safe. It is time for the silent service to be heard.

Assessment of Long-Term Health Effects of Antimalarial Drugs When Used for Prophylaxis National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Board on Population Health and Public Health Practice.2020-03-24 Among the many who serve in the United States Armed Forces and who are deployed to distant locations around the world, myriad health threats are encountered. In addition to those associated with the disruption of their home life and potential for combat, they may face distinctive disease threats that are specific to the locations to which they are deployed. U.S. forces have been deployed many times over the years to areas in which malaria is endemic, including in parts of Afghanistan and Iraq. Department of Defense (DoD) policy requires that antimalarial drugs be issued and regimens adhered to for deployments to malaria-endemic areas. Policies directing which should be used as first and as second-line agents have evolved over time based on new data regarding adverse events or precautions for specific underlying health conditions, areas of deployment, and other operational factors At the request of the Veterans Administration, Assessment of Long-Term Health Effects of Antimalarial Drugs When Used for Prophylaxis assesses the scientific evidence regarding the potential for long-term health effects resulting from the use of antimalarial drugs that were approved by FDA or used by U.S. service members for malaria prophylaxis, with a focus on mefloquine, tafenoquine, and other antimalarial drugs that have been used by DoD in the past 25 years. This report offers conclusions based on available evidence regarding associations of persistent or latent adverse events.
