Sampling Methods for Applied Research Peter Tryfos.1996-02-16 An excellent introductory that uses simple numerical illustrations to provide an intuitive understanding of concepts and confirm major results. Describes various methods for sample selection and estimation including unequal probability sampling and the prediction approach. The accompanying disk contains data files for cases and two computer programs--one of which is an interactive DOS program designed to serve as a tutorial by assisting the implementation of complicated sampling formulas.

Engaged Learners and Digital Citizens Brad Garner.2016-08-17 The world of higher education is entering a new phase in its history. Now, and in the coming decades, the ubiquitous role of digital technology will dramatically influence the manner in which teaching and learning are designed and delivered. This book encourages faculty to adopt a proactive stance in relation to technology through the use of engaging digital tools that promote skill acquisition and inspire critical thinking in today's college students (and tomorrow's leaders). The book delineates a conceptual model for digital learning, and provides specific examples of digital tools and their possible applications for teaching and learning. It will also assist faculty in making the leap to operationalizing that model within the context of the courses they teach, by highlighting how to identify instructional priorities and match digital tools with identified needs.

Classroom Assessment Lorin W. Anderson.2003-02-26 This book is based on the belief that decision making is perhaps the most critical of all teaching skills and that good assessments lie at

the core of good decision making. To become better teachers then, teachers must learn to make informed decisions about both individual students (learning decisions) and about groups of students (teaching decisions). This book gives equal status to both types of decisions and shows how assessment is integral to both. The organization of the book is sequential, mirroring the way in which information should be used to make decisions. It begins with a conceptual framework linking information to decision making, then moves to the design of assessment instruments and the collection of assessment information, then to the interpretation of assessment information and, finally, to reporting the results of both the assessment and the decision-making process. There is an emphasis throughout on linking why teachers assess with what and how they assess. Other key features include: * Practical Framework -- The book's framework corresponds to the framework that teachers use to grade their students: conduct (classroom behavior), effort (student motivation), and achievement (student learning). * Unique Chapters -- There are separate chapters on interpreting assessment information prior to decision making and on reporting assessment information to parents, teachers, and administrators. * Flexibility -- Because of its modest length and price, and its practical focus on the links between assessment and everyday teacher decision making, this text can be used either in full-length assessment courses for teachers or to teach the assessment units in educational psychology or integrated methods courses.

BELAJAR MENULIS PTK Rosana, S.Pd.. Masih banyak guru yang mengalami kendala dalam melaksanakan publikasi ilmiah, misalnya menulis Penelitian Tindakan Kelas (PTK). Guru sering mengalami kebingungan, dari mana akan mulai menulis, apa yang harus ditulis, belum lagi masalah pembuatan laporannya. Kehadiran buku ini diharapkan dapat mengatasi kesulitan itu semua, bahkan guru akan termotivasi untuk melaksanakan PTK. Buku ini mengupas habis mengenai penulisan

laporan PTK, dari awal sampai akhir, sehingga anda dengan mudah melaksanakan PTK dengan baik. Buku ini juga memuat kebijakan pemerintah tentang kenaikan pangkat guru, sehingga guru tidak perlu susah payah bertanya kesana kemari jika ingin naik pangkat, cukup membuka buku ini. Terwujudnya buku ini merupakan bukti nyata, bahwa penulis telah melaksanakan publikasi ilmiah yang merupakan kewajiban sebagai seorang guru professional. Selamat berjuang memiliki buku ini, semoga bermanfaat.

Cinta Dalam Sentuhan Nortauli Simanjuntak.2019-04-10 Buku kumpulan cerpen berjudul “Cinta dalam Sentuhan” ini ditulis dalam rangka mengajak guru dan siswa untuk berkarya bersama melalui goresan pena untuk menghasilkan karya cerdas dalam dunia seni terutama cerita pendek. Penulisan buku kumpulan cerpen ini merupakan ide kreatif yang perlu dicontoh dan didukung oleh berbagai pihak terutama para pemerhati pendidikan dalam hal ini Kepala Sekolah dan Dinas Pendidikan. Buku ini lahir dengan dilatarbelakangi oleh kondisi pendidikan modern yang menuntut para guru untuk lebih serius dalam mendidik tunas-tunas harapan bangsa melalui penggalan bakat dan kreatifitas, penekanan pembelajaran berbasis value (moral) didasari iman dan taqwa serta penerapan pembelajaran berbasis kreatifitas (creativity based learning).

Financial Management Raymond Brooks.2013 Brooks uses a tools-based approach that presents the key concepts of finance (or tools) early on in the text, followed by an application of those concepts to various finance problems. By introducing key finance concepts with personal and business-related finance examples, this text helps readers understand how the tools of finance can help them in any

career or business situation. This edition features strengthened material on financial statements, a discussion on yield curves, new and advanced spreadsheet problems, and updated material.

The Western Medical Tradition Lawrence I. Conrad.1995-08-17 This text, written by members of the Wellcome Institute for the History of Medicine and first published in 1995, is designed to cover the history of western medicine from classical antiquity to 1800. As one guiding thread it takes, as its title suggests, the system of medical ideas that in large part went back to the Greeks of the eighth century BC, and played a major role in the understanding and treatment of health and disease. Its influence spread from the Aegean basin to the rest of the Mediterranean region, to Europe, and then to European settlements overseas. By the nineteenth century, however, this tradition no longer carried the same force or occupied so central a position within medicine. This book charts the influence of this tradition, examining it in its social and historical context. It is essential reading as a synthesis for all students of the history of medicine.

Perl Power! Michael Schilli.1999 XML and Java: Developing Web Applications is a tutorial that will teach Web developers, programmers, and system engineers how to create robust XML business applications for the Internet using the Java technology. The authors, a team of IBM XML experts, introduce the essentials of XML and Java development, from a review of basic concepts to thorough coverage of advanced techniques. Using a step-by-step approach, this book illustrates real-world implications of XML and Java technologies as they apply to Web applications. Readers should have a basic understanding of XML as well as experience in writing simple Java programs. XML and Java enables you to: *Develop Web business applications using XML and Java through real-world examples and code *Quickly obtain XML programming skills *Become familiar with Document Object Models (DOM) and the Simple API for XML (SAX) *Understand the Electronic Document Interchange

(EDI) system design using XML and Document Type Definition (DTD), including coverage on automating business-to-business message exchange *Leverage JavaBean components *Learn a hands-on, practical orientation to XML and Java XML has strong support from industry giants such as IBM,

Twelve Years a Slave Solomon Northup.2014-03-08 Now a major motion picture nominated for nine Academy Awards. Narrative of Solomon Northup, a Citizen of New-York, Kidnapped in Washington City in 1841, and Rescued in 1853. Twelve Years a Slave by Solomon Northup is a memoir of a black man who was born free in New York state but kidnapped, sold into slavery and kept in bondage for 12 years in Louisiana before the American Civil War. He provided details of slave markets in Washington, DC, as well as describing at length cotton cultivation on major plantations in Louisiana.

Sampling Essentials Johnnie Daniel.2011-04-25 Written for students taking research methods courses, this text provides a thorough overview of sampling principles. The author gives detailed, nontechnical descriptions and guidelines with limited presentation of formulas to help students reach basic research decisions, such as whether to choose a census or a sample, as well as how to select sample size and sample type. Intended for students and researchers in the social and behavioral sciences, public health research, marketing research, and related areas, the text provides nonstatisticians with the concepts and techniques they need to do quality work and make good sampling choices.

Learning to Write Aviva Freedman,Ian Pringle,Janice Yalden.2014-09-25 First published in 1983. The present volume holds the selected papers of a symposium on CCTE Conference, held in 1979 in Ottawa, Canada. The content provides an introduction and a review of major themes in Writing

research and pedagogy. This is in part achieved by the papers themselves, and in part by the introductions the Editors offer to each of the four Parts. Second, the reader is continually presented with a characteristic applied linguistic interplay of research and practice, each affecting the other, in a mutual and interactive manner. Third, the issues of 'Writing as Product versus Writing as Process', or 'The Teaching of Writing Skills versus the Development of Writing Abilities' or 'The Use of Writing for Learning and Knowing' are not merely issues affecting Writing alone but language learning and teaching as a whole, and one might add, the entire process of education.

Third language acquisition Camilla Bardel,Laura Sánchez. This book deals with the phenomenon of third language (L3) acquisition. As a research field, L3 acquisition is established as a branch of multilingualism that is concerned with how multilinguals learn additional languages and the role

that their multilingual background plays in the process of language learning. The volume points out some current directions in this particular research area with a number of studies that reveal the complexity of multilingual language learning and its typical variation and dynamics. The eight studies gathered in the book represent a wide range of theoretical positions and offer empirical evidence from learners belonging to different age groups, and with varying levels of proficiency in the target language, as well as in other non-native languages belonging to the learner's repertoire. Diverse linguistic phenomena and language combinations are viewed from a perspective where all previously acquired languages have a potential role to play in the process of learning a new language. In the six empirical studies, contexts of language learning in school or at university level constitute the main outlet for data collection. These studies involve several language backgrounds and language combinations and focus on various linguistic features. The specific target languages in the empirical studies are English, French and Italian. The volume also includes two theoretical chapters. The first one conceptualizes and describes the different types of multilingual language learning investigated in the volume: i) third or additional language learning by learners who are bilinguals from an early age, and ii) third or additional language learning by people who have previous experience of one or more non-native languages learned after the critical period. In particular, issues related to the roles played by age and proficiency in multilingual acquisition are discussed. The other theoretical chapter conceptualizes the grammatical category of aspect, reviewing previous studies on second and third language acquisition of aspect. Different models for L3 learning and their relevance and implications for representations of aspect and for potential differences in the processing of second and third language acquisition are also examined in this chapter. As a whole, the book presents current research into third or additional language learning

by young learners or adults, considering some of the most important factors for the complex process of multilingual language learning: the age of onset of the additional language and that of previously acquired languages, social and affective factors, instruction, language proficiency and literacy, the typology of the background languages and the role they play in shaping syntax, lexicon, and other components of a L3. The idea for this book emanates from the symposium Multilingualism, language proficiency and age, organized by Camilla Bardel and Laura Sánchez at Stockholm University, Department of Language Education, in December 2016.

Sociolinguistics and Language Teaching Sandra Lee McKay, Nancy H. Hornberger. 1996 This text provides an introduction to the field of sociolinguistics for second and foreign language teachers. This book provides an introduction to the field of sociolinguistics for second and foreign language teachers. Chapters cover the basic areas of sociolinguistics, including regional and social variations in dialects, language and gender, World English, and intercultural communication. Each chapter has been specially written for this collection by an individual who has done extensive research on the topic explored. This is the first introductory text to address explicitly the pedagogical implications of current theory and research in sociolinguistics. The book will also be of interest to any teachers with students from linguistically diverse backgrounds.

Action Research Jean McNiff. 2002-01-22 Since the first edition of this established text was published in 1988, action research has gained ground as a popular method amongst educational researchers, and in particular for practising teachers doing higher-level courses. In this new edition Jean McNiff provides updates on methodological discussions and includes new sections of case study material and information on supporting action research. The book raises issues about how action research is theorised, whether it is seen as a spectator discipline or as a real life practice, and how practitioners

position themselves within the debate. It discusses the importance for educators of understanding their own work and showing how their educative influence can lead to the development of good orders in formal and informal learning settings and in the wider community. This second edition comes at a time when, after years of debate over what counts as action research, it is now considered an acceptable and useful part of mainstream research practice.

Google Search and Tools in a Snap Preston Gralla.2006-04-04 These days, nobody really wants to learn everything there is about a product like Google Tools. And even if you did, who has the time to endlessly tinker and play with it until you figure everything out? You just want a book that will quickly show you how to do things with Google Tools, like perform power searches, find pictures with Google Images, find online bargains with Froogle, use the Google Toolbar, and discover the world with Google Earth. *Google Search and Tools in a Snap* does just that. Organized into a series of well-organized, bite-sized, quickly accomplished tasks, the book lets you zero right in on the one particular task you want to accomplish, quickly figure out what to do, do it, and then get back to using the plethora of Google Tools.

Contextual Teaching and Learning Elaine B. Johnson.2002 Contextual teaching and learning (CTL) is a system for teaching that is grounded in brain research. Brain research indicates that we learn best when we see meaning in new tasks and material, and we discover meaning when we are able to connect new information with our existing knowledge and experiences. Students learn best, according to neuroscience, when they can connect the content of academic lessons with the context of their own daily lives. Johnson discusses the elements of the brain-compatible contextual teaching and learning system: making meaningful connections; investing school work with significance; self-regulated learning; collaboration; critical and creating thinking; nurturing the individual; reaching

high standards; and using authentic assessment. Drawing on the practices of teachers in kindergarten through university, Johnson provides numerous examples of how to use each part of the CTL system.

Action Research in Health Ernest T. Stringer, William Genat. 2004 The purpose of this book is to show how health professionals can make more effective use of their expertise by ensuring that it makes sense to their clients, while providing the basis for health care that is easily integrated into home, work and / or community life of the individuals concerned. --p. iii.

Participatory Action Research Robin McTaggart. 1997-10-31 In this book the authors tell their stories of action research in their own ways, and indeed, give expression to their own cultural positioning as they draw upon their extensive experience in the field and the academy. They write in terms of their own experience, but with a collective as well as individual purpose. Contributors describe the history of participatory action research, and identify its interpretations in the diverse cultural contexts of Colombia, India, Austria, Australia, Venezuela, USA, England, Spain, Thailand, and New Caledonia. Drawing on the fields of nursing, education, community development, land reform, popular education, agriculture, and mass media, the authors describe the development of democratic research practice in quite different institutional and cultural contexts. Teachers, social workers, managers, nurses, adult educators, and agricultural extension and community development workers

will all find this collection of writings from key participatory action research practitioners useful and informative.

Becoming Critical Wilfred Carr, Stephen Kemmis. 2003-09-02 Life is hard for Anne and her father under Cromwell's harsh rule, which has reduced them from wealth to poverty. With one friend fearing for his life and another apparently lost to her, a man she hates sees her as a way of fulfilling all his ambitions. Will she have to surrender to him or lose everything?--EBL.

Fish Catching Methods of the World Andres von Brandt. 1984 This book grew out of Professor Von Brandt's lifetime devotion to the study of fishing gears and catching methods from prehistoric times to the present. In it he shows how the main components of early methods - netting, lines, hooks, floats and sinkers - are still in common use even though their efficiency has been improved. His extensive travels have enabled him to include examples from many eras and many different parts of the world and his descriptions are enhanced by hundreds of illustrations. He describes gears in logical sequence from the most primitive gathering methods to the possible use of fully automated harvesting machines totally operated by computers. Also, he has developed a rational classification system for the multitude of fish devices and techniques. Although this has been done in a most scholarly way, the resultant text is alive with interesting anecdotes. This meticulously compiled edition will be invaluable to everyone concerned with commercial fisheries as well as a delight to sport fishermen and all with an interest in fish or its capture.

The Flipped Classroom Carl Reidsema, Lydia Kavanagh, Roger Hadgraft, Neville Smith.2017-02-27

Teaching and learning within higher education continues to evolve with innovative and new practices such as flipped teaching. This book contributes to the literature by developing a much deeper understanding of the complex phenomenon of flipped classroom approaches within higher education. It also serves as a practical guide to implementing flipped classroom teaching in academic practice across different higher educational institutions and disciplines. Part 1 of this book (Practice) describes the considerations involved in flipped classroom teaching, including the challenges faced in transforming teaching and learning within higher education. Further, it reviews the educational concepts on which the flipped classroom is based, including a selected history of similar innovations in the past. The final sections of Part 1 explore the tools needed for flipping, the design steps, assessment methods and the role of reflective practice within flipped teaching environments. “p>Part 2 of the book (Practices) provides a range of case studies from higher educational institutions in different countries and disciplines to demonstrate the many shapes and sizes of flipped classrooms. Many of the challenges, such as engaging students in their own learning and shifting them from spectators in the learning process to active participants, prove to be universal.

A First Course in Machine Learning, Second Edition Simon Rogers, Mark Girolami.2016-10-14 A

First Course in Machine Learning by Simon Rogers and Mark Girolami is the best introductory book for ML currently available. It combines rigor and precision with accessibility, starts from a detailed explanation of the basic foundations of Bayesian analysis in the simplest of settings, and goes all the way to the frontiers of the subject such as infinite mixture models, GPs, and MCMC. —Devdatt Dubhashi, Professor, Department of Computer Science and Engineering, Chalmers University, Sweden This textbook manages to be easier to read than other comparable books in the subject while retaining all the rigorous treatment needed. The new chapters put it at the forefront of the field by covering topics that have become mainstream in machine learning over the last decade. —Daniel Barbara, George Mason University, Fairfax, Virginia, USA The new edition of A First Course in Machine Learning by Rogers and Girolami is an excellent introduction to the use of statistical methods in machine learning. The book introduces concepts such as mathematical modeling, inference, and prediction, providing ‘just in time’ the essential background on linear algebra, calculus, and probability theory that the reader needs to understand these concepts. —Daniel Ortiz-Arroyo, Associate Professor, Aalborg University Esbjerg, Denmark I was impressed by how closely the material aligns with the needs of an introductory course on machine learning, which is its greatest strength...Overall, this is a pragmatic and helpful book, which is well-aligned to the needs of an introductory course and one that I will be looking at for my own students in coming months. —David Clifton, University of Oxford, UK The first edition of this book was already an excellent introductory text on machine learning for an advanced undergraduate or taught masters level course, or indeed for anybody who wants to learn about an interesting and important field of computer science. The additional chapters of advanced material on Gaussian process, MCMC and mixture modeling provide an ideal basis for practical projects, without disturbing the very clear and

readable exposition of the basics contained in the first part of the book. —Gavin Cawley, Senior Lecturer, School of Computing Sciences, University of East Anglia, UK This book could be used for junior/senior undergraduate students or first-year graduate students, as well as individuals who want to explore the field of machine learning...The book introduces not only the concepts but the underlying ideas on algorithm implementation from a critical thinking perspective. —Guangzhi Qu, Oakland University, Rochester, Michigan, USA
