Mobilities and Inequality Hanja Maksim, Manfred Max Bergman. 2016-04-22 This book opens up the debate on the interrelations between space and mobilities with regard to different dimensions of social inequality. Based on the premise that the dynamics caused by modernization, globalization, migration and social change affect the structuring of the social fabric, the focus of the book is to illuminate these processes of social and spatial restructurings. A leading team of contributors from the Cosmobilities network highlight different aspects of inequality in relation to mobilities, such as gender, supplying transport infrastructure, job-related relocations, multi-locality, social network geography, and socio-spatial development.

Women, Race, & Class Angela Y. Davis. 2011-06-29 From one of our most important scholars and civil rights activist icon, a powerful study of the women's liberation movement and the tangled knot of oppression facing Black women. "Angela Davis is herself a woman of undeniable courage. She should be heard."—The New York Times Angela Davis provides a powerful history of the social and political influence of whiteness and elitism in feminism, from abolitionist days to the present, and demonstrates how the racist and classist biases of its leaders inevitably hampered any collective ambitions. While Black women were aided by some activists like Sarah and Angelina Grimke and the suffrage cause found unwavering support in Frederick Douglass, many women played on the fears of white supremacists for political gain rather than take an intersectional approach to liberation. Here, Davis not only contextualizes the legacy and pitfalls of civil and women's rights activists, but also discusses Communist women, the murder of Emmitt Till, and Margaret Sanger's racism. Davis shows readers how the inequalities between Black and white women influence the contemporary issues of rape, reproductive freedom, housework and child care in this bold and indispensable work.

Genetics and the Behavior of Domestic Animals Temple Grandin, Mark J. Deesing. 2013-04-22 Behavior is shaped by both genetics and experience--nature and nurture. This book synthesizes research from behavioral genetics and animal and veterinary science, bridging the gap between these fields. The objective is to show that principles of behavioral genetics have practical applications to agricultural and companion animals. The continuing domestication of animals is a complex process whose myriad impacts on animal behavior are commonly under-appreciated. Genetic factors play a significant role in both species-specific behaviors and behavioral differences exhibited by individuals in the same species. Leading authorities explore the impact of increased intensities of selection on domestic animal behavior. Rodents, cattle, pigs, sheep, horses, herding and guard dogs, and poultry are all included in these discussions of genetics and behavior, making this book useful to veterinarians, livestock producers, laboratory animal researchers and technicians, animal trainers and breeders, and any researcher interested in animal behavior. Includes four new chapters on dog and fox behavior, pig behavior, the effects of domestication and horse behavior Synthesizes research from behavioral genetics, animal science, and veterinary literature Broaches fields of behavior genetics and behavioral research Includes practical applications of principles discovered by behavioral genetics researchers Covers many species ranging from pigs, dogs, foxes, rodents, cattle, horses, and cats

Children and Animals Frank R. Ascione.2005 Animal abuse has been an acknowledged problem for centuries, but only within the past few decades has scientific research provided evidence that the maltreatment of animals often overlaps with violence toward people. The variants of violence, including bullying or assaults in a schoolyard, child abuse in homes, violence between adult intimate partners, community hostility in our streets and neighborhoods, and even the context of war, are now the subject of concerted research efforts. Very often, the association of these forms of violence with cruelty to animals has been found. The perpetrators of such inhumane treatment are often children and adolescents. How common are these incidents? What motivates human maltreatment of animals? Are there cultural, societal, neighborhood, and family contexts that contribute to cruelty to animals? How early in a child's life does cruelty to animals emerge and are these incidents always a sign of future interpersonal violence? Are there ways of preventing such cruelty? Can we intervene effectively with children who already have a history of abuse and violence? *Children and Animals: Exploring the Roots of Kindness and Cruelty* presents the current scientific and professional wisdom about the relation between the maltreatment of animals and interpersonal violence directed toward other human beings. However, the author, Frank R. Ascione, a noted expert in these areas, writes in a style and presents the findings in a language that will be understandable to parents, teachers, counselors, clergy, animal welfare professionals, foster parents, mental health professionals, youth workers, law enforcement professionals, and anyone else whose work or interest crosses into the lives of children and adolescents.

The Animal Experimentation Debate David E. Newton.2013-05-09 Reviewing the topic from antiquity to the present day, this book examines the debate over the use of animals in research in a fair and balanced way. The debate over the use of nonhuman animals in experimental research has gone on for centuries, and it continues as vigorously today as it ever has. In fact, in the last decade, the controversy has intensified, making animal testing a topic at the highest level of debate of any socioscientific issue in the United States. This book presents all sides of the issue so that readers can come to their own conclusions as to the morality and validity of animal experimentation, and provides biographies of individuals and descriptions of organizations that have been involved in the debate over the centuries. Additionally, it documents the historical shift in thinking that made animal experimentation commonplace between the time of the ancient Greeks and the 19th century, to the mindset of some who argue for an end to the practice and alternative ways of conducting medical experimentation to benefit human health.

Dictionary of Spoken Spanish U. S. War Dept.2013-03-27 This is a complete, unabridged republication of a Dictionary of Spoken Spanish, which was specially prepared by nationally known linguists for the U.S. War Department (TM#30-900). It is compiled from spoken Spanish and emphasizes idiom and colloquial usage in both Castilian and Latin American areas. More than 16,000 entries provide exact translations of both English and Spanish sentences and phrases; as many as 60 idioms are listed under each entry. This is easily the largest list of idiomatic constructions ever

published. Travelers, business people, and students who are interested in Latin American studies have found this dictionary their best source for those expressions of daily life and social activity not usually found in books. More than 18,000 idioms are given, not as isolated words that you have to conjugate or alter, but as complete sentences that you can use without change. A 25-page introduction provides a rapid survey of Spanish sounds, grammar, and syntax, with full consideration of irregular verbs. It is especially apt in its modern treatment of phrase and clause structure. A 17-page appendix gives translations of geographical names, numbers, national holidays for Spanish countries, important street signs, useful expressions of high frequency, and a unique 7-page glossary of Spanish and Spanish-American foods and dishes.

Biodiversity Conservation and Habitat Management - Volume I Francessa Gherardi, Claudia Corti, Manuela Gualtieri. 2009-12-29 Biodiversity Conservation and Habitat Management is a component of Encyclopedia of Natural Resources Policy and Management in the global Encyclopedia of Life Support Systems (EOLSS), which is an integrated compendium of twenty one Encyclopedias. Biodiversity is declining worldwide at a very unprecedented rate as a complex response to several human-induced changes in the global environment. The magnitude of these changes is so large and their effects are so strongly linked to the altered ecosystem processes and to human (ab-)use of natural resources that biodiversity loss is today perceived as one of the most important issues that humankind should face with extreme urgency. Disseminating information, raising awareness, and propelling concern within a diversified target audience (general public, schools, local authorities, and government agencies) are also essential to develop shared responsibility and to encourage collaborative efforts and compliance. This has been the main objective of "Biodiversity Conservation and Habitat Management". The Theme on Biodiversity Conservation and Habitat Management provides the essential aspects and a myriad of issues of great relevance to our world in eight major topics of discussion, and is focused on 1) History and Overview of Biodiversity Conservation and Protected Areas, 2) Management of Forests and other Wooded Habitats, 3) Management of Savannahs and Other Open Habitats, 4) Management of Wetlands, 5) Management of Tourism and Human Recreation Pressure, 6) Conservation Strategies, Species Action Plans and Translocation, 7) Captive Breeding and Gene Banks, and 8) Eradication and Control of Invasive Species. These two volumes are aimed at the following five major target audiences: University and College students Educators, Professional practitioners, Research personnel and Policy analysts, managers, and decision makers and NGOs.

Urban Elements: Furniture and Microarchitecture Josep M. Serra. 1996 This book, aimed at both users and creators of elements and spaces of the city, brings together a selection of 132 pieces of European street furniture and microarchitecture. These elements are situated in the public space, and united by the shared purpose of providing a service to the public; a service that encompasses a great range and variety of uses and functions, as these emerge in line with the new needs of the city. All of the elements featured in this present selection are in production now and currently available on the market; recently created or reinterpreted, they are all, in one way or another, innovations in design or use of materials, or have some specific added value of their own. Little pieces of architecture by world-famous figures such as Norman Foster, Renzo Piano, Aldo Rossi, Jorge Pensi, Bach/Mora or Philippe Starck. The book is structured in the form of descriptive profiles, easily accessible, full and informative, of each of the featured elements; these identify the designer and the manufacturer and give the complete technical and formal characteristics, together with photographs and scale drawings.

Galapagos, World's End William Beebe. 1924 In 1835, Charles Darwin observed variations among the Galapagos Islands' species that inspired him to formulate the theory of natural selection. Eighty-eight years later, in 1923, a scientific expedition sponsored by the New York Zoological Society followed in Darwin's wake. Led by the author, a biologist and explorer, the scientists visited the islands to study and obtain specimens of indigenous plants and animals. This is his personal account of that expedition. He recounts the expedition's productive results, including specimens of 60 species previously unknown to science, and an unparalleled accumulation of data that stimulated many scientific papers and new avenues of naturalistic inquiry.

Convergence Culture Henry Jenkins. 2008-09 "What the future fortunes of [Gramsci's] writings will be, we cannot know. However, his permanence is already sufficiently sure, and justifies the historical study of his international reception. The present collection of studies is an indispensable foundation for this." —Eric Hobsbawm, from the preface Antonio Gramsci is a giant of Marxian thought and one of the world's greatest cultural critics. Antonio A. Santucci is perhaps the world's preeminent Gramsci scholar. Monthly Review Press is proud to publish, for the first time in English, Santucci's masterful intellectual biography of the great Sardinian scholar and revolutionary. Gramscian terms such as "civil society" and "hegemony" are much used in everyday political discourse. Santucci warns us, however, that these words have been appropriated by both radicals and conservatives for contemporary and often self-serving ends that often have nothing to do with Gramsci's purposes in developing them. Rather what we must do, and what Santucci illustrates time and again in his dissection of Gramsci's writings, is absorb Gramsci's methods. These can be summed up as the suspicion of "grand explanatory schemes," the unity of theory and practice, and a focus on the details of everyday life. With respect to the last of these, Joseph Buttigieg says in his *Nota*: "Gramsci did not set out to explain historical reality armed with some full-fledged concept, such as hegemony; rather, he examined the minutiae of concrete social, economic, cultural, and political relations as they are lived in by individuals in their specific historical circumstances and, gradually, he acquired an increasingly complex understanding of how hegemony operates in many diverse ways and under many aspects within the capillaries of society." The rigor of Santucci's examination of Gramsci's life and work matches that of the seminal thought of the master himself. Readers will be enlightened and inspired by every page.

Cybernetics or Control and Communication in the Animal and the Machine, Reissue of the 1961 second edition Norbert Wiener. 2019-10-08 A classic and influential work that laid the theoretical foundations for information theory and a timely text for contemporary information theorists and practitioners. With the influential book *Cybernetics*, first published in 1948, Norbert Wiener laid the theoretical foundations for the multidisciplinary field of cybernetics, the study of controlling the flow of information in systems with feedback loops, be they biological, mechanical, cognitive, or social. At the core of Wiener's theory is the message (information), sent and responded to (feedback); the functionality of a machine, organism, or society depends on the quality of messages. Information corrupted by noise prevents homeostasis, or equilibrium. And yet *Cybernetics* is as philosophical as it is technical, with the first chapter devoted to Newtonian and Bergsonian time and the philosophical mixed with the technical

throughout. This book brings the 1961 second edition back into print, with new forewords by Doug Hill and Sanjoy Mitter. Contemporary readers of Cybernetics will marvel at Wiener's prescience—his warnings against “noise,” his disdain for “hucksters” and “gadget worshipers,” and his view of the mass media as the single greatest anti-homeostatic force in society. This edition of Cybernetics gives a new generation access to a classic text. *Vitruvius, the Ten Books on Architecture* Morris Hicky Morgan, Vitruvius Pollio, Herbert Langford Warren. 2018-10-20 This work has been selected by scholars as being culturally important and is part of the knowledge base of civilization as we know it. Animal Revolution Richard D. Ryder. 2000-02-01 When Richard Ryder coined the term 'speciesism' over two decades ago, the issue of animal rights was very much a minority concern that had associations with crankiness. Today, the animal rights movement is well-established across the globe and continues to gain momentum, with animal experimentation for medical research high on the agenda and very much in the news. This pioneering book - an historical survey of the relationship between humans and non-humans - paved the way for these developments. Revised, updated to include the movement's recent history and available in paperback for the first time, and now introducing Ryder's concept of 'painism', Animal Revolution is essential reading for anyone who cares about animals or humanity. Dr Richard D. Ryder is a psychologist, ethicist, historian and political campaigner. He is also a past chairman of the RSPCA. His other books include *Victims of Science: The Use of Animals in Research*, *The Political Animal: The Conquest of Speciesism* and *Animal Welfare and the Environment* (editor). As Mellon Professor, he taught Animal Welfare at Tulane University.
