Prenatal Development of Postnatal Functions Brian Hopkins, Scott P. Johnson. 2005-05-30 This book shows how, and in what ways, prenatal development serves as a preparation for life after birth. Largely, such explanation stemming from the transnatal continuity theory has been ignored in mainstream developmental psychology. However, since the advent of real-time ultrasonography with humans, and increasingly refined experiments with avian and mammalian species, plausible scenarios linking prenatal and postnatal development are beginning to emerge. One is the theory of fetal programming. Here, the authors provide authoritative reviews of current knowledge regarding continuities and discontinuities between prenatal and postnatal development of brain-behavior relationships across a variety of species, including humans.

Recent Trends in International Migration of Doctors, Nurses and Medical Students OECD. 2019-07-25 This report describes recent trends in the international migration of doctors and nurses in OECD countries. Over the past decade, the number of doctors and nurses has increased in many OECD countries, and foreign-born and foreign-trained doctors and nurses have contributed to a significant extent. New in-depth analysis of the internationalisation of medical education shows that in some countries (e.g. Israel, Norway, Sweden and the United States) a large and growing number of foreign-trained doctors are people born in these countries who obtained their first medical degree abroad before coming back. The report includes four case studies on the internationalisation of medical education in Europe (France, Ireland, Poland and Romania) as well as

a case study on the integration of foreign-trained doctors in Canada.

Stain-resistant, Nonstick, Waterproof, and Lethal Callie Lyons.2007 It's everywhere. It's toxic. And it lasts forever. Asbestos? Nuclear waste? No. This statement, made by the Environmental Protection Agency in 2003, refers to a little-known but ubiquitous chemical compound whose trade name is C8. Manufactured by DuPont, it is used in the making of a plethora of stain-resistant, waterproof, and grease-resistant consumer products. The first members of the public to hear about C8, in January 2002, were the residents of the Mid-Ohio Valley, whose water supplies were found to contain detectable amounts. The EPA launched a multi-agency review of the manmade chemical, which became the largest investigation of its kind. As a local journalist, Lyons has covered the C8 story from the beginning. Here she explains how the danger of C8 first came to light, how the investigation progressed, and what remedies have been initiated.

Medical Emergency Teams Michael A. DeVita,Ken Hillman,Rinaldo Bellomo.2007-07-03 Why Critical

Care Evolved METs? In early 2004, when Dr. Michael DeVita informed me that he was considering a textbook on the new concept of Medical Emergency Teams (METs), I was surprised. At Presbyterian-University Hospital in Pittsburgh we introduced this idea some 15 years ago, but did not think it was revolutionary enough to publish. This, even though, our fellows in critical care medicine training were all involved and informed about the importance of "Condition C (Crisis)," as it was called to distinguish it from "Condition A (Arrest)." We thought it absurd to intervene only after cardiac arrest had occurred, because most cases showed prior deterioration and cardiac arrest could be prevented with rapid team work to correct precluding problems. The above thoughts were logical in Pittsburgh, where the legendary Dr. Peter Safar had been working since the late 1950s on improving current resuscitation techniques, first ventilation victims of apneic from drowning, treatment of smoke inhalation, and so on. This was followed by external cardiac compression upon demonstration of its efficiency in cases of unexpected sudden cardiac arrest. Dr. Safar devoted his entire professional life to improvement of cardiopulmonary resuscitation. He and many others emphasized the importance of getting the CPR team to out-of-hospital victims of cardiac arrest as quickly as possible.

Psychoanalysis and Repetition Juan-David Nasio. 2019-07-01 Addresses unconscious repetition, a concept that is crucial to an understanding of Freudian and Lacanian psychoanalysis. In *Psychoanalysis and Repetition*, Juan-David Nasio, one of the leading contemporary Lacanian psychoanalysts in France, argues that unconscious repetition represents the core of psychoanalysis as well as no less than the fundamental constitution of the human being. Through repetition, the unconscious memory of the past erupts, without our knowledge, in our choices and actions, to such an extent that, for Nasio, we are our past in action. While Nasio explains that repetition is both healthy and pathological, the book is primarily concerned with the repetition of unconscious trauma,

as trauma engenders trauma, through unconscious fantasms that are expressed, in turn, as symptoms. Through vivid clinical examples, as well as trenchant theoretical explications involving repetition, Nasio illuminates a range of fundamental concepts in Freud and Lacan and offers a rethinking of the psychoanalytic tradition in the context of this theme. Nasio's approach is richly interdisciplinary, incorporating passages from philosophers Descartes and Spinoza, for example, and from such literary figures as Pindar, Proust, and Verlaine. The interdisciplinary fabric of Nasio's discourse conveys the crucial importance of the concept of repetition in psychoanalysis and in the human condition. "A clear, accessible, and highly readable contribution to psychoanalytic literature in the Freudian and Lacanian traditions. Nasio's writing, and its translation by Pettigrew, is extremely lucid, especially by the standards of much Lacanian literature. This is a very worthwhile book in its own right." — Adrian Johnston, author of *Irrepressible Truth: On Lacan's 'The Freudian Thing'*

Wong's Essentials of Pediatric Nursing - Text and Study Guide Package Marilyn J.

Hockenberry,David Wilson.2012-10-05 This money-saving package includes the 9th edition of *Wong's Essentials of Pediatric Nursing - Text and Study Guide*.

Pediatric Critical Care Study Guide Steven E. Lucking, Frank A. Maffei, Robert F. Tamburro, Neal J. Thomas.2012-04-10 This is the first comprehensive study guide covering all aspects of pediatric critical care medicine. It fills a void that exists in learning resources currently available to pediatric critical care practitioners. The major textbooks are excellent references, but do not allow concise reading on specific topics and are not intended to act as both text and study guide. There are also several handbooks available, but these are usually written for general pediatric residents and lack

the advanced physiology and pathophysiology required for the higher level pediatric critical care practitioner

Rebuilding the Fire and Rescue Services Peter Murphy, Katarzyna Lakoma, Peter Eckersley, Russ Glennon. 2020-03-31 The book examines the new arrangements for organizing policy, delivery and public accountability in Fire and Rescue Services. Contributors of this invaluable text assess the effectiveness of government responses to new legislation that came as a result of inadequacies identified in governmental reviews, namely the Policing and Crime Act of 2017.

Pediatric Diabetic Ketoacidosis Stephen C. Duck, Joseph R. Hageman. 2015 The future of persons with Type 1 Diabetes Mellitus is continuing to look brighter with the advent of biomedical technology. Nevertheless, the acute consequences of this disease remains a significant threat. Diabetic ketoacidosis [DKA] remains the most serious challenge for primary care physicians and subspecialists caring for children and young persons with Diabetes Mellitus. Its prevention is possible only among those already diagnosed. Awareness of the etiology and clinical presenting signs among children of all ages is requisite for primary care and emergency department staff [Chapter 1]. While more likely to occur among those with Type 1 diabetes, a significant proportion of children with Type 2 diabetes are also at risk [Chapter 3]. Once diagnosed, the physician team must understand not only what biochemical imbalances must be corrected, but also what life-threatening complications must be avoided [Chapter 1]. The path through that maze is not yet fully interpreted; many choices remain as options, but each must be carefully evaluated. Diagnosis among the very young is a challenge because of they lack self-awareness and clarity of signs and symptoms [Chapter 2]. Education of the primary care staff is critical and able to alter the incidence of DKA at the time of diagnosis. Institutions that treat children and adolescents with DKA need an informed Emergency

Department as well as Pediatric Intensive Care Facilities. Access to appropriate consultations, such as pediatric endocrinology, cardiology, neurology and neurosurgery are crucial. The initiation of care is critical, and occurs invariably in the Emergency Department [Chapter 4]. Meticulous documentation of fluid composition and volume, insulin administration, vital signs and neurological state of well-being is essential. These will facilitate the transition to the appropriate in-patient service, whose task is to understand the biological impact of fluid rehydration and fluid flux, as well as hypocapnea, hyperglycemia and cranial perfusion [Chapter 5]. The current standards of care all but prevent most of the varied biochemical complications of appropriate care for persons with DKA. However, awareness of these possibilities is crucial [Chapter 6]. Yet, one complication remains unexplained and too often unpredicted, and it is devastating to the pediatric patient: cerebral edema. This complication, its prevention and treatment are discussed [Chapter 6]. Type 2 diabetes mellitus is continuing to increase in incidence and prevalence among all ages. Once thought to be non-ketosis prone diabetes, now persons undiagnosed or previously diagnosed do obtain DKA. They, however, have other unique medical requirements that must be applied to their treatment [Chapter 3]. Hyperglycemic hyperosmolar state is a complication no longer limited to adults with diabetes or children with Type 2 diabetes mellitus. While the incidence is fortunately lower than that of DKA, its outcome is potentially direr. Appreciation of the unique treatment requirements and guidelines are discussed [Chapter 7]. This monograph provides a comprehensive compendium to those caring for children of all ages with diabetic ketoacidosis, its related disorders and associated conditions.

Emergency Department Management of Obstetric Complications Joelle Borhart.2017-05-16

Obstetrical emergencies can be among the most stressful events an emergency physician will face in

their entire career. The purpose of this book is to provide an evidence-based, practical approach to the wide spectrum of obstetric complications an emergency physician must be prepared to manage throughout all trimesters pregnancy as well as postpartum, including complications of assisted reproductive technology, bleeding, precipitous delivery and preterm labor. Clinical pearls and pitfalls are highlighted throughout. The approach to the pregnant patient with trauma, non-pregnancy-related abdominal pain, or in cardiac arrest is discussed. Updates in the classification and management of the hypertensive disorders of pregnancy are presented. Recent controversies surrounding the use of anti-emetics for first trimester nausea and vomiting and the use of a beta-hCG discriminatory zone for the evaluation of pregnancy of unknown location are also addressed. Obstetrical support services vary widely between different facilities, and Emergency Department Management of Obstetric Complications is written for emergency clinicians in all practice settings. This book provides useful information for daily practice as well as preparation for rarely encountered and potentially life-threatening events.

Disasters and Public Health Bruce W. Clements, Julie Casani. 2016-02-23 Disasters and Public Health: Planning and Response, Second Edition, examines the critical intersection between emergency management and public health. It provides a succinct overview of the actions that may

be taken before, during, and after a major public health emergency or disaster to reduce morbidity and mortality. Five all-new chapters at the beginning of the book describe how policy and law drive program structures and strategies leading to the establishment and maintenance of preparedness capabilities. New topics covered in this edition include disaster behavioral health, which is often the most expensive and longest-term recovery challenge in a public health emergency, and community resilience, a valuable resource upon which most emergency programs and responses depend. The balance of the book provides an in-depth review of preparedness, response, and recovery challenges for 15 public health threats. These chapters also provide lessons learned from responses to each threat, giving users a well-rounded introduction to public health preparedness and response that is rooted in experience and practice. Contains seven new chapters that cover law, vulnerable populations, behavioral health, community resilience, preparedness capabilities, emerging and re-emerging infectious diseases, and foodborne threats Provides clinical updates by new MD co-author Includes innovative preparedness approaches and lessons learned from current and historic public health and medical responses that enhance clarity and provide valuable examples to readers Presents increased international content and case studies for a global perspective on public health

Food Colorants Carmen Socaciu.2007-10-24 Drawing on the expertise of internationally known, interdisciplinary scientists and researchers, *Food Colorants: Chemical and Functional Properties* provides an integrative image of the scientific characteristics, functionality, and applications of color molecules as pigments in food science and technology, as well as their impact on health. The book emphasizes the structure-function relationships of pigment molecules to explain biosynthesis, modifications and degradation during storage and processing, and the effect of these changes on quality and safety. Understanding the rate and nature of degradation assists in selecting optimum

processing parameters. Beginning with an overview of the physics and biochemistry of color, the book focuses on the mechanics of pigment stability and bioavailability, and antioxidant and pro-oxidant action. It reviews the influence of pigments on health and metabolism, incorporating results of in vivo and in vitro studies. It addresses the occurrence of pigment in food matrices and their stability during processing and storage. Conventional technologies as well as new, environmentally friendly methods are presented along with recent advances in biotechnology to produce colorants. There is also a chapter on novel approaches to the biosynthesis of colorants by microalgae, microorganisms, and genetic engineering. Contributions give significant attention to analytical methods and recent advances in detecting both natural and synthetic colorants, their quality, quantity, and degradation during processing and storage. The book rounds out its comprehensive coverage with a look at quality and safety risk assessments and international regulations, as well as lists of formerly and newly approved colorants and additives. Peer reviewed contributions and critical evaluations ensure a concise, systematic presentation of the relationships between the chemical nature and functional properties of various natural and synthetic pigments used to color food.

Springer Handbook of Odor Andrea Büttner. 2017-02-28 The Springer Handbook of Odor is the definitive guide to all aspects related to the study of smell and their impact on human life. For the first time, this handbook aligns the senso-chemo-analytical characterization of everyday smells encountered by mankind, with the elucidation of perceptual, hedonic, behavioral and physiological responses of humans to such odors. From birth onwards we learn to interact with our environment using our sense of smell. Moreover, evolutionary processes have engendered a multi-faceted communication that is supported – even dominated – by olfaction. This compilation examines the responses of humans to odors at different stages of life, thereby building a foundation for a widely overseen area of research with broader ramifications for human life. The expert international authors and editor align aspects, concepts, methodologies and perspectives from a broad range of different disciplines related to the science of smell. These include chemistry, physiology, psychology, material sciences, technology but also disciplines related to linguistics, culture, art and design. This handbook, edited by an internationally renowned aroma scientist with the support of an outstanding team of over 60 authors, is an authoritative reference for researchers in the field of odors both in

academia and in industry and is also a useful reference for newcomers to the area.

Pediatric Critical Care in Resource-Limited Settings Krishan Chugh, Ndidi Musa, Phuc Huu Phan, Srinivas Murthy, Yves Ouellette. 2019-07-11 Millions of children are dying each year with preventable and reversible critical illness, including circulatory shock and respiratory failure. According to the World Health Organization, in 2015, the under-five mortality rate in low-income countries was 76 deaths per 1000 live births - about 11 times the average rate in high-income countries (7 deaths per 1000 live births). There is limited data about the nature of the delivery of critical care in resource-limited regions. The care of critically ill children in low-resource settings is challenging, contributing factors include limitations in the existing infrastructure, lack of resources, and low numbers of appropriately trained healthcare workers. Meeting these challenges requires clinical evidence pertinent to the local settings, adequate number of well-trained personnel, quality improvement activities, and the ongoing development of preventative measures. In addition, approaches to prevent worsening critical illness in at-risk hospitalized patients are needed. We are presenting 15 state-of-the art manuscripts from international experts, from all settings, involved in the care of critically ill children in resource-limited settings. This collection of manuscripts covers topics including education, research, clinical experience and infectious diseases. We hope that we

are providing a window into the future of critical care delivery for all children around the world.

Mixed Methods Research for Nursing and the Health Sciences Sharon Andrew,Elizabeth J.

Halcomb.2009-09-24 Mixed methods research combines quantitative and qualitative research methods in a single study. The use of mixed methods research is increasingly popular in nursing and health sciences research. This growth in popularity has been driven by the increasing complexity of research problems relating to human health and wellbeing. Mixed Method Research for Nursing and the Health Sciences is an accessible, practical guide to the design, conduct and reporting of mixed method research in nursing or the health sciences. Each chapter stands alone, describing the various steps of the research process, but contains links to other chapters. Within the text, 'real-life' examples from the published literature, doctoral theses and the unpublished work of the authors, illustrate the concepts being discussed. Places mixed methods research within its contemporary context Includes international contributions from UK, Australia, NZ and USA Provides an accessible introduction to theoretical and philosophical underpinnings Demystifies strategies for analysing mixed methods data Examines strategies for publishing mixed methods research Includes learning objectives and exemplars in each chapter Final chapters provide 'real-life' examples of applied research About the Authors: Sharon Andrew is Head of Program (Postgraduate) and Elizabeth J. Engen. The book is divided into four sections. The first reunites the fields of psychophysics and the perception of environmental odours and discusses the impact of odours on beliefs and expectations. The second addresses cognitive processes in olfaction, how odours are interpreted, lexicalized, associated with contexts and remembered. The third focuses on the cerebral bases of olfactory awareness and the neuropsychological investigation of olfaction with special emphasis on olfactory dysfunctions, and the last concerns affective and developmental processes in olfaction. The aim in producing this book is that it will help promote further research in olfactory cognition and attract new inquisitive scientists to the field. The volume will be a useful resource for academics, students, and professionals who study olfaction, as well as to scientists who work in the domains of perception, cognitive neuroscience and environmental psychology more broadly.
