A Successful Transformation? Petr Pavlínek.2008-04-30 This is a brilliant examination of the complex processes of the post-1990 transformation in the Czech automotive industry and its selective integration into the West European system. The post-1990 restructuring of the industry is analyzed in the context of its pre-1990 development and in the context of the East European automobile industry as a whole. Specifically, the book examines the development and post-1990 restructuring of the Czech car, components, and truck industries.

American Military Vehicles of World War I Albert Mroz.2009-10-21 In World War I the American motor vehicle industry was tested by the sudden appearance of vast transport challenges. The nation's immense manufacturing capabilities and abundant natural resources combined with increased standardization and mass production to enable the industry to meet the military's needs. Motor vehicles and aircraft were quickly cemented as the most influential military tools of the early twentieth century. This book both describes the development and use of a wide range of specialized

motor vehicles during World War I and analyzes how their advent indelibly altered modern warfare and transportation.

The Structure of the Defense Industry Nicole Ball, Milton Leitenberg. 2021-05-30 Proponents of arms control and disarmament are often confronted with the argument that reductions in defense expenditure lead to cutbacks in military industries and thus to economic hardship. While a reduction in defense production would cause some economic dislocation, this would be mitigated by the ability of the economy to adapt to changing patterns of production. This book, first published in 1983, assesses the likely effects of reductions in defense industries by an examination of the roles these industries play in national economies. Each chapter discusses industry employment, output, research and development, capital value, profitability, concentration and competition, internal organization and regional employment concentration. Other questions considered include the economic importance of weapons exports, the defense industry as a 'leading edge' in maintaining national technological capabilities, and the reliance of individual firms on defense contracting.

Diesel Engine Repair Manual for Renault 19/21, 1870c. C. Peter Russek. 1994-03-01

American Cars, 1973-1980 J. "Kelly" Flory, Jr. 2012-12-03 The 1973 oil crisis forced the American automotive industry into a period of dramatic change, marked by stiff foreign competition, tougher product regulations and suddenly altered consumer demand. With gas prices soaring and the economy in a veritable tailspin, muscle cars and the massive need-for-speed engines of the late '60s were out, and fuel efficient compacts were in. By 1980, American manufacturers were churning out some of the most feature laden, yet smallest and most fuel efficient cars they had ever built. This exhaustive reference work details every model from each of the major American manufacturers from model years 1973 through 1980, including various captive imports (e.g. Dodge's Colt, built by Mitsubishi.) Within each model year, it reports on each manufacturer's significant news and details every model offered: its specifications, powertrain offerings, prices, standard features, major options, and production figures, among other facts. The work is heavily illustrated with approximately 1,300 photographs.
