Students with Autism: How to improve language, literacy and academic success Katharine Beals. 2022-09-30 Beals describes the root causes of the language and learning challenges in autism, their various academic consequences, and a variety of tools and strategies for addressing them. Drawing on what the most current evidence shows about the nature of autism and which therapies are most successful, the book discusses the implications for autism-friendly instruction in academic subjects, noting the ways in which today's classrooms come up short, and suggesting various adjustments that teachers can make. Instead of focusing on social and behavioral issues, general accommodations, and general ways to address learning difficulties, Beals zeros in on academics, on accommodations within specific academic subjects, and on techniques that target autism-specific deficits, situating the issue of educational access within the broader context of disability rights, neurodiversity, and debates about what disability rights and neurodiversity should encompass. Complete acceptance of individuals on the autism spectrum must include complete educational access. This means rethinking assumptions about autistic students, about how we teach expressive language, about how we teach reading comprehension, and about what and how we teach in the many K-12 classrooms attended by autistic students.

Evaluating Second Language Vocabulary and Grammar Instruction Frank Boers. 2021-03-14 Providing a much-needed critical synthesis of research on teaching vocabulary and grammar to students of a second or foreign language, this book puts the research into perspective in order to distil recommendations for language teaching. Boers evaluates a comprehensive range of both well-established and lesser-known research strands and classroom practices to draw out the most effective instructional approaches to teaching words, multiword expressions and grammar patterns. Chapters discuss learning as a by-product of communicative activities, language-focused instruction, diverse types of exercises, mnemonic techniques and more, with a view to building bridges between the available research on such instructional approaches and how they are commonly implemented in actual language courses and textbooks. This book helps teachers make research-informed decisions regarding their instructional approaches to words, phrases and patterns, and direct researchers to specific areas in need of further inquiry. Boers not only demonstrates how research findings can inform effective teaching, but also calls for a deeper appreciation on the part of researchers of the realities of the teaching profession, making this a worthwhile text for preservice teachers, teacher educators, graduate students and scholars.

Conversational Interaction in Second Language Acquisition Alison Mackey. 2013-12-02 This edited collection of empirical studies examines the link between interaction and second language learning. The studies provide readers with insights into a wide variety of issues at the centre of current research into the relationship between conversational interaction and second language learning outcomes.
